Clustered Database Platform 280/3 With Oracle9i Database Real Application Clusters Late-Breaking News

This document contains the late-breaking news for the Clustered Database Platform 280/3 With Oracle9i Database Real Application Clusters (RAC) product. This information was found after the initial release of the product.

Known Issues

This section contains general issues discovered after the release of the product.

`/etc/init.d/dbora` File

There is a code error in the `/etc/init.d/dbora` file. You must fix this error before you reboot the cluster for the first time.

▼ To Fix the `/etc/init.d/dbora` File

1. On each cluster node, open the `/etc/init.d/dbora` file in a text editor.

2. Find line 45 in the file.

The line should read as follows:

```
sleep $WAIT_SLEEP # Do NOT Remove this line.
```

The `$WAIT_SLEEP` variable is an undefined shell variable.

3. Change line 45 so that it reads as follows:

```
sleep $WAIT_TIME # Do NOT Remove this line.
```

Caution – You must change this line on both cluster nodes before you reboot the cluster for the first time. Use of the undefined shell variable may cause the Oracle9i software to start itself on a cluster node before the VERITAS VxVM software has gained access to the Sun StorEdge™ T3 arrays. If this occurs, the Oracle9i software start-up will fail.

Known Bugs

There have been no new bugs found after the initial release of the Clustered Database Platform 280/3 With Oracle9i Database RAC product.
