Sun Microsystems, Inc. has intellectual property rights relating to technology that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more of the U.S. patents listed at <http://www.sun.com/patents> and one or more additional patents or pending patent applications in the U.S. and in other countries.

This document and the product to which it pertains are distributed under licenses restricting their use, copying, distribution, and decompilation. No part of the product or of this document may be reproduced in any form by any means without prior written authorization of Sun and its licensors, if any.

Third-party software, including font technology, is copyrighted and licensed from Sun suppliers.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and in other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, AnswerBook2, docs.sun.com, Netra, OpenBoot, SunSolve, and Solaris are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and in other countries.

All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and in other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

U.S. Government Rights—Commercial use. Government users are subject to the Sun Microsystems, Inc. standard license agreement and applicable provisions of the FAR and its supplements.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Sun Microsystems, Inc. a les droits de propriété intellectuels relatants à la technologie qui est décrit dans ce document. En particulier, et sans la limitation, ces droits de propriété intellectuels peuvent inclure un ou plus des brevets américains énumérés à <http://www.sun.com/patents> et un ou les brevets plus supplémentaires ou les applications de brevet en attente dans les Etats-Unis et dans les autres pays.

Ce produit ou document est protégé par un copyright et distribué avec des licences qui en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a.

Le logiciel détenu par des tiers, et qui comprend la technologie relative aux polices de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées des systèmes Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, AnswerBook2, docs.sun.com, Netra, OpenBoot, SunSolve, et Solaris sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays.

Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciées de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

LA DOCUMENTATION EST FOURNIE "EN L'ÉTAT" ET TOUTES AUTRES CONDITIONS, DECLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES, DANS LA MESURE AUTORISEE PAR LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE A LA QUALITE MARCHANDE, A L'APTITUDE A UNE UTILISATION PARTICULIERE OU A L'ABSENCE DE CONTREFAÇON.

# Netra CT 820 Server Release Notes

---

The *Netra CT 820 Server Release Notes* contain important and late-breaking information about the Netra™ CT 820 Server, including:

- [“Firmware Versions” on page 2](#)
- [“Known Issues” on page 3](#)

The most recent versions of the Netra CT 820 Server documentation are available at:

<http://www.sun.com/products-n-solutions/hardware/docs/Servers/>

---

# Firmware Versions

For this release of the software, the CT 820 server firmware must at the following (or compatible) versions:

- Netra CP2300 cPSB board Firmware version: 1.0.18
- SMCFW FLASH Code version 4.1.6
- SMCFW BOOT Code version: 4.15.2

To display the current firmware version, use the `.version` command at the OpenBoot PROM prompt. For example:

```
ok .version
```

If you do not have the correct versions of the firmware, go to the SunSolve Web site, <http://www.sun.com/sunsolve>, and download the following firmware patch.

- 115193-07

Refer to the Readme file in the patch for any special installation instructions and to the *Netra CP2300 cPSB Board Installation and Technical Reference Manual* (816-7186) for instructions on upgrading the firmware.

---

# Known Issues

TABLE 1 shows the known issues with this release of the Netra CT 820 server.

TABLE 1 Known Issues

Bug ID	Problem	Workaround
4902465	During a node board boot, if you have not configured the node board for multiple console use, the message <code>cvc: WARNING: cvc_register: register w/ no console open</code> is displayed.	You can safely ignore this message. If you want to configure the node board for multiple console use, refer to “Configuring Your System for Multiple Console Use” in the <i>Netra CT 820 Server System Administration Guide</i> .
4903566	If you break out of booting the Solaris™ operating environment and then issue the <code>go</code> command at the <code>ok</code> prompt, you see the message <code>Fast Data Access MMU Miss</code> , and the boot stops.	At the <code>ok</code> prompt, issue the <code>reset</code> command. If the <code>auto-boot?</code> variable is set to <code>false</code> , then issue a <code>boot</code> command after the reset has completed.
4912844	After multiple console use is enabled at the OpenBoot™ PROM level, the <code>prtpticl</code> command output shows that serial port 0 is unknown, even though a <code>tip</code> session is active.	No workaround available for this release.
4959719	On the Netra CP2300 cPSB board, both the system (boot) flash and the user flash memory reside on the same physical device. If you attempt to write data to the board’s user flash PROM while you are reading data from either the user or system flash memory, you may render the board unbootable.	Make sure that you do not access the Netra CP2300 cPSB board’s user flash memory for reading and writing simultaneously. You can read and write user flash memory data as separate tasks, but do not attempt to do these read and write operations at the same time.
5016029	If you have connected an external SCSI DAT tape drive to a Netra CP2300 node board, and you perform a reconfiguration boot on the board, the PICL daemon, <code>picld(1M)</code> , will terminate and create a <code>core(4)</code> file.	To work around this issue, you must add the following line to the Netra CP2300 board’s <code>/etc/system</code> file:  <code>forceload: drv/st</code>  After adding this line, you must reboot the board to apply the change.  Adding this line will force the operating system to load the SCSI disk device driver ( <code>sd</code> ) kernel module during the kernel initialization. For more information, refer to the <code>system(4)</code> and <code>sd(7D)</code> online man pages.

**TABLE 1** Known Issues (Continued)

Bug ID	Problem	Workaround
5027667	If you use the platform information and control library (PICL) software to change the temperature threshold settings of a Netra CP2300 node board, the MOH software will not display the new values of the threshold settings. Instead, the MOH software will display the previous temperature threshold values.	Use the MOH software to set the temperature threshold settings of the Netra CP2300 node boards.
5065036	If you manually stop and start the <code>ctmgx</code> MOH agent running on a node board in rapid succession, the MOH agent running on the distributed management card may not represent the node board correctly.	After stopping the agent, wait for at least 30 seconds before restarting it.
5069151	After connecting external SCSI devices to a Netra CP2300 board and rebooting the board, the MOH software and the <code>prtpicl</code> command displays error messages. Also, the SCSI devices will not be shown in the MOH hierarchy.	To work around this issue, you must add the following line to the Netra CP2300 board's <code>/etc/system</code> file:  <code>forceload: drv/sd</code>  After adding this line, you must reboot the board to apply the change. Adding this line will force the operating system to load the SCSI disk device driver ( <code>sd</code> ) kernel module during the kernel initialization. For more information, refer to the <code>system(4)</code> and <code>sd(7D)</code> online man pages.
5070778	In rare situations, after repeated resets or a forced failovers, the distributed management card may panic and display error messages.	The system will recover after the panic without your intervention.
5071230	After connecting external IDE devices to a Netra CP2300 board and rebooting the board, the MOH software and the <code>prtpicl</code> command will display error messages. Also, the IDE devices will not be shown in the MOH hierarchy.	To work around this issue, you must add the following line to the Netra CP2300 board's <code>/etc/system</code> file:  <code>forceload: drv/dad</code>  After adding this line, you must reboot the board to apply the change. Adding this line will force the operating system to load the IDE disk device driver ( <code>dad</code> ) kernel module during the kernel initialization. For more information, refer to the <code>system(4)</code> and <code>dad(7D)</code> online man pages.

**TABLE 1** Known Issues (Continued)

Bug ID	Problem	Workaround
5073565	When using Netra CT 820 system with the Netra High Availability (HA) Suite Foundation Services Software, the two distributed management cards will not be able to communicate with each other through the carrier grade transport protocol (CGTP) network interfaces.	Before using the Netra CT 820 system with the Netra High Availability (HA) Suite Foundation Services Software, you must replace the <code>/etc/init.d/ctvlan</code> script with the script shown in <a href="#">CODE EXAMPLE 1</a> . See <a href="#">“Replacing the ctvlan Initialization Script”</a> on page 6 for more information.
5073598	After using the <code>cfgadm -c unconfigure</code> command to unconfigure a PCI mezzanine card (PMC) hard drive installed on Netra CP2300 cPSB board, the MOH software will not report the correct status of the PMC drive. The <code>cfgadm -al</code> command will show that the PMC drive has been unconfigured, but the MOH software will incorrectly show that the drive is still connected and configured.	Use the <code>cfgadm -al</code> command, and not the MOH software, to display the configuration status of the installed devices. Refer to the <code>cfgadm(1M)</code> man page for more information about the command.
5074452	After a distributed management card failover, reset, or system power-on, you cannot set the time of a node board using the <code>ntpdate(1M)</code> command. The <code>ntpdate</code> command will display the following message: <code>no server suitable for synchronization found</code> .	The <code>ntpdate</code> command synchronizes the date and time by polling the network time protocol (NTP) server on the distributed management cards. Once the NTP daemon is started, it can take up to four minutes before the daemon starts providing service to its clients. If a client makes an NTP query within this interval, the client will receive an error message.
5075663	Making an NTP request using the <code>ntpdate(1M)</code> command to a distributed management card alias IP address will not succeed. The <code>ntpdate</code> request returns the message: <code>no server suitable for synchronization found</code> .	When making an NTP request, use the distributed management card’s static IP address and not the alias IP address. To workaround this issue, use the IP addresses of both distributed management cards when using the <code>ntpdate</code> command. For example:  <code>ntpdate 192.168.13.22 192.168.13.23</code>
5076639	When logged into a node board through a distributed management card console session, the node board may reset while using the <code>kaadb(1M)</code> kernel debugger.	Distributed management card console sessions are designed for using essential Solaris™ OS commands, and not for utilities like the <code>kaadb</code> kernel debugger. If you wish to use utilities like <code>kaadb</code> , log into the node board directly, and not through a console session.

# Replacing the ctvlan Initialization Script

Before using the Netra High Availability (HA) Suite Foundation Services software on the Netra CT 820 system, you must replace the `/etc/init.d/ctvlan` initialization and termination script with the script shown in [CODE EXAMPLE 1](#).

## CODE EXAMPLE 1 New ctvlan Initialization Script

```
#!/bin/sh
#
#
# Copyright (c) 1996-2004 by Sun Microsystems, Inc.
# All rights reserved.
#
# Updated ctvlan script for NHAS
# ctvlan v1.0 07/09/04

BASEDRV0=dmfe33000
BASEDRV1=dmfe44001
IFNAME0=$BASEDRV0
IFNAME1=$BASEDRV1
IPADDR=$1
NETMASK=$2

SLOTNUM=`echo $1 | cut -d. -f4`
NETWORK=`echo $1 | cut -d. -f1-3`

VLAN0=`expr $SLOTNUM + 32`
VLAN1=`expr $SLOTNUM + 64`
VLAN0IPADDR=$NETWORK.$VLAN0
VLAN1IPADDR=$NETWORK.$VLAN1
SYSMGTIP=$IPADDR

if [ -f /etc/.UNCONFIGURED ]; then
    exit 1
fi

#
# This script needs to check for 2 files. Since crfs.sync.ok is only created
# on MENs, this script needs to check if either of the 2 files
# (crfs.sync.ok or nma.pid) exists.
#
# Need to put this into a loop since NHAS does not complete until almost
# beginning of rc3.d time. Poll every 5 seconds
#
```

**CODE EXAMPLE 1** New ctvlan Initialization Script (*Continued*)

```
while true ; do

if [ -f /var/run/SUNWcgha/crfs.sync.ok ] || [ -f /var/run/SUNWcgha/nma.pid ];
then
#
# Configure VLAN interfaces
#

/sbin/ifconfig $IFNAME0 plumb
