Getting Started

✔ Review the product release notes.

✔ Obtain the product license key.

Before you can use any VERITAS product, you must complete the License Key Request form included with this package. To replace a missing form, or to obtain temporary keys for a product evaluation, contact your sales representative.

Cumulative Patch CD

VERITAS is implementing a new procedure to apply software fixes to released versions of the VERITAS File System. The procedure follows the Sun Microsystems patch packaging process. The VERITAS patch included on this CD can be installed on the following Solaris Operating System versions:

◆ Solaris 2.5.1

◆ Solaris 2.6 (Sun patch 106125-08 must be installed first)

◆ Solaris 7 (Sun patch 107171-04 must be installed first)

You can install or remove the VERITAS patch using the Sun patch utilities. For Solaris 7, use the patchadd(1M) and patchrm(1M) commands. For Solaris 2.6 and Solaris 2.5.1, refer to the Install.info file within the patch directories for instructions on how to use the installpatch and backoutpatch scripts for those versions.

The Cumulative Patch CD contains a separate directory for each Solaris version on which VxFS 3.3.2 is installed. The VERITAS README file within each directory describes the software fixes. Be sure to review it before installing the patch.
