The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

Send Us Your Comments

Oracle HTML DB 2 Day Developer, Release 1.6 Part No. B14377-01

Oracle welcomes your comments and suggestions on the quality and usefulness of this publication. Your input is an important part of the information used for revision.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where?
- Are the examples correct? Do you need more examples?
- What features did you like most about this manual?

If you find any errors or have any other suggestions for improvement, please indicate the title and part number of the documentation and the chapter, section, and page number (if available). You can send comments to us in the following ways:

- Electronic mail: infodev_us@oracle.com
- FAX: (650) 506-7227 Attn: Server Technologies Documentation Manager
- Postal service:

Oracle Corporation Oracle Server Technologies Documentation 500 Oracle Parkway, Mailstop 4op11 Redwood Shores, CA 94065 U.S.A.

If you would like a reply, please give your name, address, telephone number, and electronic mail address (optional).

If you have problems with the software, please contact your local Oracle Support Services.

Preface

Oracle HTML DB 2 Day Developer contains tutorials with step-by-step instructions that explain how to create a variety application components and complete applications using the Oracle HTML DB development environment.

This preface contains these topics:

- Audience
- Documentation Accessibility
- Structure
- Related Documents
- Conventions

Audience

Oracle HTML DB 2 Day Developer is intended for application developers who are building database-centric Web applications using Oracle HTML DB, release 1.6. To use this guide, you need to have a general understanding of Oracle HTML DB release 1.6, relational database concepts, and the operating system environment under which you are running Oracle HTML DB.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For additional information, visit the Oracle Accessibility Program Web site at

http://www.oracle.com/accessibility/

Accessibility of Code Examples in Documentation

JAWS, a Windows screen reader, may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, JAWS may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Structure

This document contains:

Chapter 1, "How to Create a Tabular Form"

Describes how to create a tabular form within an existing application and then how to change one of the updatable columns from a text field to a select list.

Chapter 2, "How to Create a Parameterized Report"

Illustrates how to create a report in which the results depend on the form input (also called a parameterized report).

Chapter 3, "How to Create a Drill Down Report"

Describes how to create a report on the DEMO_ORDERS table with links to drill down detail data in the DEMO_ORDER_ITEMS table.

Chapter 4, "How to Control Form Layout"

Describes the steps to create a data input form and explains how to change its layout by changing region and item attributes.

Chapter 5, "How to Work with Check Boxes"

Explains the different ways you can create check boxes and how to reference and process the values of checked boxes.

Chapter 6, "How to Implement a Web Service"

Describes how to call a Web service from within an Oracle HTML DB application.

Chapter 7, "How to Create a Stacked Bar Chart"

Explains how to create a stacked bar chart using existing data within the demonstration application, *Sample Application*.

Chapter 8, "How to Upload and Download Files in an Application"

Illustrates how to create a form and report with links for file upload and download, create and populate another table to store additional attributes about the documents, and create the mechanism to download a document in your custom table.

Chapter 9, "How to Incorporate JavaScript into an Application"

Describes some usage scenarios for JavaScript and includes details about how to implement them in your application.

Chapter 10, "How to Build and Deploy an Issue Tracking Application"

Offers in-depth, step-by-step instructions that explain how to create and deploy an issue tracking application. This application tracks the assignment, status, and progress of issues related to a project.

Conventions

This section describes the conventions used in the text and code examples of this documentation set. It describes:

- Conventions in Text
- Conventions in Code Examples
- Conventions for Windows Operating Systems

Conventions in Text

We use various conventions in text to help you more quickly identify special terms. The following table describes those conventions and provides examples of their use.

Convention	Meaning	Example
Bold Bold typeface indicates terms that are defined in the text or terms that appear in a glossary, or both.		When you specify this clause, you create an index-organized table .
Italics	Italic typeface indicates book titles or	Oracle Database Concepts
	emphasis.	Ensure that the recovery catalog and target database do <i>not</i> reside on the same disk.

Convention	Meaning	Example
UPPERCASE monospace	Uppercase monospace typeface indicates elements supplied by the system. Such	You can specify this clause only for a NUMBER column.
(fixed-width) font	elements include parameters, privileges, datatypes, Recovery Manager keywords, SOL keywords, SOL*Plus or utility	You can back up the database by using the BACKUP command.
	commands, packages and methods, as well as system-supplied column names,	Query the TABLE_NAME column in the USER_TABLES data dictionary view.
	database objects and structures, usernames, and roles.	Use the DBMS_STATS.GENERATE_STATS procedure.
lowercase	Lowercase monospace typeface indicates	Enter sqlplus to start SQL*Plus.
monospace (fixed-width) font	executable programs, filenames, directory names, and sample user-supplied elements. Such elements include computer and database names, net service names and connect identifiers, user-supplied database objects and structures, column names, packages and classes, usernames and roles, program units, and parameter values. <i>Note:</i> Some programmatic elements use a mixture of UPPERCASE and lowercase. Enter these elements as shown.	The password is specified in the orapwd file.
		Back up the datafiles and control files in the /disk1/oracle/dbs directory.
		The department_id, department_name, and location_id columns are in the hr.departments table.
		Set the QUERY_REWRITE_ENABLED initialization
		Compart as a success
		The IDentitial class implements these methods
		The orepotter class implements these methods.
lowercase	Lowercase italic monospace font represents	You can specify the <i>parallel_clause</i> .
monospace (fixed-width) font	placenoiders of variables.	Run <i>old_release</i> .SQL where <i>old_release</i> refers to the release you installed prior to upgrading.

Conventions in Code Examples

Code examples illustrate SQL, PL/SQL, SQL*Plus, or other command-line statements. They are displayed in a monospace (fixed-width) font and separated from normal text as shown in this example:

SELECT username FROM dba_users WHERE username = 'MIGRATE';

The following table describes typographic conventions used in code examples and provides examples of their use.

Convention	Meaning	Example
[]	Anything enclosed in brackets is optional.	DECIMAL (digits [, precision])
{ }	Braces are used for grouping items.	{ENABLE DISABLE}
	A vertical bar represents a choice of two options.	{ENABLE DISABLE} [COMPRESS NOCOMPRESS]
	Ellipsis points mean repetition in syntax descriptions.	CREATE TABLE AS subquery;
	In addition, ellipsis points can mean an omission in code examples or text.	<pre>SELECT col1, col2, , coln FROM employees;</pre>
Other symbols	You must use symbols other than brackets ([]), braces ({ }), vertical bars (1), and ellipsis points () exactly as shown.	<pre>acctbal NUMBER(11,2); acct CONSTANT NUMBER(4) := 3;</pre>
Italics	Italicized text indicates placeholders or variables for which you must supply particular values.	CONNECT SYSTEM/system_password DB_NAME = database_name

Convention	Meaning	Example
UPPERCASE	Uppercase typeface indicates elements supplied by the system. We show these terms in uppercase in order to distinguish them from terms you define. Unless terms appear in brackets, enter them in the order and with the spelling shown. Because these terms are not case-sensitive, you can use them in either UPPERCASE or lowercase.	SELECT last_name, employee_id FROM employees; SELECT * FROM USER_TABLES; DROP TABLE hr.employees;
lowercase	Lowercase typeface indicates user-defined programmatic elements, such as names of tables, columns, or files.	SELECT last_name, employee_id FROM employees; sqlplus hr/hr
	Note: Some programmatic elements use a mixture of UPPERCASE and lowercase. Enter these elements as shown.	CREATE USER mjones IDENTIFIED BY ty3MU9;

Conventions for Windows Operating Systems

The following table describes conventions for Windows operating systems and provides examples of their use.

Convention	Meaning	Example
Choose Start > <i>menu item</i>	How to start a program.	To start the Database Configuration Assistant, choose Start > Programs > Oracle - <i>HOME_NAME</i> > Configuration and Migration Tools > Database Configuration Assistant .
File and directory names	File and directory names are not case-sensitive. The following special characters are not allowed: left angle bracket (<), right angle bracket (>), colon (:), double quotation marks ("), slash (/), pipe (1), and dash (-). The special character backslash (\) is treated as an element separator, even when it appears in quotes. If the filename begins with \ then Windows assumes it uses the Universal Naming Convention.	c:\winnt"\"system32 is the same as C:\WINNT\SYSTEM32
C:\>	Represents the Windows command prompt of the current hard disk drive. The escape character in a command prompt is the caret (^). Your prompt reflects the subdirectory in which you are working. Referred to as the <i>command prompt</i> in this manual.	C:\oracle\oradata>
Special characters	The backslash (\) special character is sometimes required as an escape character for the double quotation mark (") special character at the Windows command prompt. Parentheses and the single quotation mark (') do not require an escape character. Refer to your Windows operating system documentation for more information on escape and special characters.	C:\> exp HR/HR TABLES=emp QUERY=\"WHERE job='REP'\"

Convention	Meaning	Example
HOME_NAME	Represents the Oracle home name. The home name can be up to 16 alphanumeric characters. The only special character allowed in the home name is the underscore.	C:\> net start OracleHOME_NAMETNSListener
ORACLE_HOME and ORACLE_BASE	In releases prior to Oracle8 <i>i</i> release 8.1.3, when you installed Oracle components, all subdirectories were located under a top level <i>ORACLE_HOME</i> directory. The default for Windows NT was C:\orant.	Go to the ORACLE_BASE\ORACLE_HOME\rdbms\admin directory.
	This release complies with Optimal Flexible Architecture (OFA) guidelines. All subdirectories are not under a top level <i>ORACLE_HOME</i> directory. There is a top level directory called <i>ORACLE_BASE</i> that by default is C:\oracle\product\10.1.0. If you install the latest Oracle release on a computer with no other Oracle software installed, then the default setting for the first Oracle home directory is C:\oracle\product\10.1.0\db_n, where <i>n</i> is the latest Oracle home number. The Oracle home directory is located directly under <i>ORACLE_BASE</i> .	
	All directory path examples in this guide follow OFA conventions.	
	Refer to Oracle Database Installation Guide for 32-Bit Windows for additional information about OFA compliances and for information about installing Oracle products in non-OFA compliant directories.	

1

How to Create a Tabular Form

A tabular form enables users to update multiple rows in a table at once using a single page. You can use the Tabular Form Wizard to create a tabular form that contains a built-in multiple row update process. This built-in process performs optimistic locking behind the scenes to maintain the data integrity.

This tutorial explains how to create a tabular form within an existing application and then how to change one of the updatable columns from a text field to a select list.

This section contains the following topics:

- About Sample Application
- Creating a Tabular Form Using a Wizard
- Changing Updatable Column Display Type

About Sample Application

Oracle HTML DB installs with a number of demonstration applications. In this exercise you will create a tabular form within the demonstration application, *Sample Application*.

To see if *Sample Application* is installed:

- 1. Log in to Oracle HTML DB.
- From the Workspace Administration list, select Review Demonstration Applications.
- 3. Locate Sample Application and check the Status column:
 - a. If the Status column displays Installed, return to the Workspace home page.
 - **b.** If the Status column displays **Not Installed**, select **Install** in the Action column.
 - **c.** Follow the on-screen instructions.

Creating a Tabular Form Using a Wizard

The Tabular Form Wizard creates a form to perform update, insert, and delete operations on multiple rows in a database table. Additionally, the wizard creates a multiple row update process that checks for MD5 checksum values before doing the update in order to prevent lost updates. The following exercise creates a tabular form on the EMP table.

To create a tabular form using the Tabular Form Wizard:

- 1. Navigate to the Workspace home page.
- 2. From the Applications list, select **Sample Application**.
- 3. Click Create Page.
- 4. On Create New Page, select Page with Component and click Next.
- 5. On Select Component Type, select Form and click Next.
- 6. On Create Page, select Tabular Form and click Next.
- 7. On Identify Table/View Owner:
 - **a.** From Table/View Owner, select the owner of the EMP table.
 - b. From Allowed Operations, accept the default.
 - c. Click Next.
- 8. For Table/View Name, select EMP and click Next.
- 9. On Identify Columns to Display:
 - **a.** For Use User Interface Defaults, accept the default.
 - b. For Select Columns, select the following columns:

ENAME, JOB, HIREDATE, SAL, COMM

Note: This exercise limits the number of columns to optimize the display on-screen. For a real form, you would probably want to include additional columns.

- c. Click Next.
- 10. For Primary Key Column 1, accept the default EMPNO and click Next.
- 11. For Source Type, accept the default Existing trigger and click Next.
- **12.** For Updatable Columns, select the following columns and click **Next**: JOB, HIREDATE, SAL, COMM
- 13. On Identify Page and Region Attributes:
 - a. For Page, enter 800.
 - b. For Page Name, enter Tabular Form on EMP.
 - c. For Region Name, enter Tabular Form on EMP.
 - d. Click Next.
- 14. On Identify Tab, accept the default, Do not use tabs, and click Next.
- **15.** On Button Labels:
 - a. Accepts the defaults for the Cancel, Delete, and Add Row buttons.
 - **b.** For the Submit button, enter Apply Changes.
 - c. Click Next.
- 16. Accept the remaining defaults, click Next, and then click Finish.

Next, run the page to view your new form.

To run the page:

- 1. Click Run Page.
- **2.** If prompted to enter a username and password:
 - a. For User Name, enter either demo or admin.
 - **b.** For Password, enter the name of the current workspace using all lowercase letters.
 - c. Click Login.
 - d. Navigate to page 800:
 - Select Edit Page from the Developer Toolbar.
 - In Page, enter **800** and click **Go**.
 - Click the Run Page icon.

As shown in Figure 1–1, note the tabular form contains four buttons. Cancel, Delete, and Apply Changes display in the upper right corner and Add Row displays at the bottom. Additionally, a check box appears to the left of each row enabling the user to select one row at a time, or a user can select all rows at once by selecting the check box to the left of the column headings. The check box is used in conjunction with the Delete button to identify the rows to be deleted.

				rov	v(s) 1 - 10 of 14 💌 🎯		
					Add Row		

Figure 1–1 Tabular Form on the EMP Table

Changing Updatable Column Display Type

When the Tabular Form Wizard creates a tabular form, updatable columns display by default as text field. You can change this default display by editing report column attributes.

To change the default display of JOB to a select list:

- **1.** Navigate to the Page Definition for page 800. Select **Edit Page** from the Developer Toolbar.
- Under Regions, click Q next to Tabular Form. The Region Attributes page appears.
- **3.** Under Report Column Attributes, click the Edit icon next to the JOB column.
- 4. Scroll down to Tabular Form Element. From Display As, select **Select List (query based LOV)**.
- Under List of Values, enter the following LOV query: SELECT DISTINCT job a, job b FROM emp
- 6. Click Apply Changes.
- 7. Click the **Run Page** icon in the upper right corner the page.

As shown in Figure 1–2, notice the Job column now displays as a select list.

					row	/(s) 1 - 10 of 14 💌 🕣
						Add Row

Note: Do not modify the select list of a SQL statement of a tabular form after it has been generated. Doing so can result in a checksum error when altering data of the form and applying updates.

Consider the following example:

SELECT ename FROM emp;

Note that this should not be altered to:

```
SELECT lower(ename) FROM emp
```

How to Create a Parameterized Report

In an Oracle HTML DB application, a report is the formatted result of a SQL query. You can generate reports in three ways:

- Running a built-in wizard
- Defining a report region based on a SQL query
- Creating a report region based on a PL/SQL function returning a SQL query

This tutorial illustrates how to create a report in which the results depend on the form input, or a parameterized report. In this exercise, you create a report region based on a SQL query which references the value of a form item within the application.

This section contains the following topics:

- Sample Report Utilizing a Form Input
- About Sample Application
- Creating a New Page
- Creating the Query Region
- Adding an Item
- Adding a Button to Submit the Page

Sample Report Utilizing a Form Input

Figure 2–1 on page 2-2 is an example of a form in which the report results are based on user input. In this example, this user populates the form by making a selection from the Show list. The easiest way to create this type of report in Oracle HTML DB is to define a report region based on a SQL query.

Ordered Products

Figure 2–1 Sample Report

About Sample Application

Oracle HTML DB installs with a number of demonstration applications. In this exercise you will create a tabular form within the demonstration application, *Sample Application*.

To see if *Sample Application* is installed:

- **1.** Log in to Oracle HTML DB.
- **2.** From the Workspace Administration list, select **Review Demonstration Applications**.
- 3. Locate Sample Application and check the Status column:
 - a. If the Status column displays Installed, return to the Workspace home page.
 - **b.** If the Status column displays **Not Installed**, select **Install** in the Action column.
 - **c.** Follow the on-screen instructions.

Creating a New Page

First, you create a new blank page and within Sample Application.

To create a new page:

- **1.** Navigate to the Workspace home page.
- 2. From the Available Applications list, select **Sample Application**.
- 3. Click the Create Page button.
- 4. On Create new Page, select Blank Page and click Next.
- 5. For Page, enter 700 and click Next.

- 6. For Name, enter Ordered Products and click Next.
- 7. On Identify Tabs, accept the default No and click Next.
- 8. Review your selections and click Finish.
- 9. On the Success Page, click Edit Page.

The Page Definition for page 700 appears.

Creating the Query Region

Next, you need to create a report.

To create a the query region:

- 1. Under Regions, click the Create icon.
- 2. On Identify Region Type, select Report and click Next.
- 3. For Report Implementation, select SQL Report and click Next.
- 4. On Identify Region Attributes:
 - a. For Title, enter Ordered Products.
 - b. Accept the remaining default values and click Next.
- **5.** Enter following SQL query:

```
SELECT p.category,
    p.product_name,
    i.quantity
FROM demo_product_info p,
    demo_order_items i
WHERE p.product_id = i.product_id
AND ( p.category = :P700_SHOW or :P700_SHOW = 'ALL' )
```

6. Click Create Region.

Adding an Item

The previous SQL query references an item named P700_SHOW.

To create the select list P700_SHOW:

- 1. Under Items, click the Create icon.
- 2. On Choose Item Type, select Select List and click Next.
- 3. For Pick Select List Control Type, accept the default of Select List and click Next.
- 4. For Item Name, enter P700_SHOW and click Next.
- 5. On Identify List of Values:
 - a. For Named LOV, select CATEGORIES.
 - **b.** For Null Text, enter:

```
- All Categories -
```

c. For Null Value, enter:

ALL

d. Click Next.

- 6. Identify Item Attributes, accept the defaults and click Next.
- 7. Click Create Item.

Adding a Button to Submit the Page

For the report to be driven by the Product Category select list (the form input), you need to submit the page. To accomplish this, you need add a button.

To add a button to submit the page:

- 1. Under Buttons, click the **Create** icon.
- 2. For Select a region, select Ordered Products and click Next.
- **3.** On Identify Button Position, select **Create a button displayed among this region's items** and click **Next**.
- **4.** For Button Name, enter P700_GO.
- 5. Click Create Button.

Run the Page

To run the page:

- 1. Click Run Page.
- 2. If prompted to enter a username and password:
 - a. For User Name, enter either demo or admin.
 - **b.** For Password, enter the name of the current workspace using all lowercase letters.
 - c. Click Login.
 - d. Navigate to page 700:
 - Select Edit Page from the Developer Toolbar.
 - In Page, enter 700 and click Go.
 - Click the **Run Page** icon.
- **3.** When the Order Products page appears, select **Computer** from the Show menu and click **Go**.

As shown in Figure 2–2 on page 2-4, notice that making a selection from the Show menu populates the form.

Figure 2–2 Form Results Being Populated from a Select List

Ordered Products

How to Create a Drill Down Report

A drill down report is a type of report that displays summary data with links to related detail data in a second report.

This tutorial describes how to create a report on the DEMO_ORDERS table with links to drill down detail data in the DEMO_ORDER_ITEMS table. Both tables are installed with the demonstration application, *Sample Application*.

This section contains the following topics:

- About Sample Application
- Creating a New Application
- Creating Reports for DEMO_ORDERS and DEMO_ORDER_ITEMS
- Customizing the DEMO_ORDER_ITEMS Report
- Linking the DEMO_ORDERS Report to the DEMO_ORDER_ITEMS Report

About Sample Application

Oracle HTML DB installs with a number of demonstration applications. To complete this exercise you must install the demonstration application, *Sample Application*.

To see if *Sample Application* is installed:

- 1. Log in to Oracle HTML DB.
- 2. From the Workspace Administration list, select **Review Demonstration Applications**.
- **3.** Locate Sample Application and check the Status column:
 - **a.** If the Status column displays **Installed**, return to the Workspace home page.
 - **b.** If the Status column displays **Not Installed**, select **Install** in the Action column.
 - **c.** Follow the on-screen instructions.

Creating a New Application

First, create a new application.

To create an application:

- 1. From the Application Builder home page, click Create Application.
- 2. On Select Creation Method, select From Scratch and click Next.

- **3.** On Create Application:
 - a. For Name, enter Drilldown Reports.
 - **b.** From Pages, select **2**.
 - c. Click Next.
- 4. For Tabs, accept the default One Level of Tabs and click Next.
- 5. For Page Names:
 - **a.** For Page 1, enter Orders.
 - b. For Page 2, enter Order Items.
 - c. Click Next.
- 6. For Page Tab Name, accept the defaults and click Next.
- 7. On Theme, select Theme 2 and click Next.
- 8. Review your selections and click Create Application.

Creating Reports for DEMO_ORDERS and DEMO_ORDER_ITEMS

Next, you need to create reports for the ${\tt DEMO_ORDERS}$ and the ${\tt DEMO_ORDER_ITEMS}$ tables.

Topics in this section include:

- Create a Report for DEMO_ORDERS
- Create a Report for DEMO_ORDER_ITEMS

Create a Report for DEMO_ORDERS

To create a report on the DEMO_ORDERS table:

- 1. On the Application Builder home page, click Create Page.
- 2. Select Page with Component and click Next.
- 3. On Select Component Type, select Report and click Next.
- 4. On Create Page, select Easy Report and click Next.
- 5. On Identify Page Attributes:
 - **a.** For Page, enter 1.
 - **b.** In Page Title and Region Title, enter Orders.
 - c. Click Next.
- 6. On Identify Tabs, accept the default **Do not use tabs** and click **Next**.
- 7. On Identify Tabls(s) and Columns:
 - **a.** For Table/View Owner, select the appropriate schema.
 - **b.** For Table/View, select **DEMO_ORDERS**.
 - **c.** From the Available Columns list, move the following columns to the Displayed Columns list:

ORDER_ID, ORDER_TOTAL, ORDER_TIMESTAMP

Next, create a join with the DEMO_CUSTOMERS table to display the customer name.

- d. From the Table/View list, select **DEMO_CUSTOMERS**.
- **e.** From the Available Columns list, select **CUST_LAST_NAME** and move it to the Display Columns list.
- f. Click Next.
- 8. On Join Conditions, accept the join by clicking Next.
- 9. On Identify Report Options, accept the defaults and click Next.
- **10.** Click Create Report Page.
- **11.** Run by page by clicking **Run Page**. If prompted for a user name and password, enter your workspace credentials in lowercase letters.

As shown in Figure 3–1 on page 3-3, a report on the DEMO_ORDERS table appears.

Orders				
Order Id	Order Total	Cust Last Name	Order Timestamp	
1	1200	Dulles	05-JAN-05	
2	599	Hartsfield	31-DEC-04	
3	1999	Hartsfield	26-DEC-04	
4	750	Logan	21-DEC-04	
5	40	Logan	16-DEC-04	
6	250	OHare	11-DEC-04	
7	3800	LaGuardia	06-DEC-04	
8	40	Lambert	01-DEC-04	
9	450	Lambert	26-NOV-04	
10	500	Bradley	21-NOV-04	
			1 - 10	

Figure 3–1 Report on DEMO_ORDERS Table

12. Select **Edit Application** from the Developer Toolbar to return to Application Builder.

Create a Report for DEMO_ORDER_ITEMS

To create a report on the DEMO_ORDER_ITEMS table:

- 1. On the Application Builder home page, click Create Page.
- 2. Select Page with Component and click Next.
- 3. On Select Component Type, select **Report** and click **Next**.
- 4. On Create Page, select Easy Report and click Next.
- 5. On Identify Page Attributes:
 - **a.** For Page, enter 2.
 - **b.** In Page Title and Region Title, enter Order Items.
 - c. Click Next.
- 6. On Identify Tabs, accept the default **Do not use tabs** and click **Next**.

- 7. On Identify Tabls(s) and Columns:
 - a. For Table/View Owner, select the appropriate schema and click Next.
 - **b.** For Table/View, select **DEMO_ORDER_ITEMS**.
 - **c.** From the Available Columns list, move the following columns to the Displayed Columns list:

ORDER_ITEM_ID, ORDER_ID, UNIT_PRICE, QUANTITY

Next, create a join with the ${\tt DEMO_PRODUCT_INFO}$ table to display the product name.

- d. For Show Only Related Tables, select No.
- e. From the Table/View list, select **DEMO_PRODUCT_INFO**.
- f. From the Available Columns list, select **PRODUCT_NAME** and move it to the Display Columns list.
- g. Click Next.
- 8. On Join Conditions, accept the join by clicking Next.
- 9. On Identify Report Options, accept the defaults and click Next.
- **10.** Click Create Report Page.
- 11. Run by page by clicking Run Page.

As shown inFigure 3–2, a report on the DEMO_ORDER_ITEMS table appears.

Figure 3–2	Report on DEMO_	ORDER	ITEMS	Table
------------	-----------------	-------	--------------	-------

Order Items				
Order Item Id	Product Name	Order Id	Unit Price	Quantity
1	3.2 GHz Desktop PC	1	1200	1
2	3.2 GHz Desktop PC	2	199	1
3	3.2 GHz Desktop PC	2	50	2
4	3.2 GHz Desktop PC	2	150	1
5	3.2 GHz Desktop PC	2	150	1

15	3.2 GHz Desktop PC	9	250	1
		row(s)	1 - 15 of 160 💌	Next ≥

Customizing the DEMO_ORDER_ITEMS Report

Next, you need to customize the Order Items page. In this exercise, you add an item to hold the value of the ORDER_ID, add a condition that constrains the report by the

value of ORDER_ID item, and modify the Region Title to note which order is being viewed.

Topics in this section include:

- Add an Item to Hold the Value of ORDER_ID
- Add a Condition
- Modify the Region Title

Add an Item to Hold the Value of ORDER_ID

To create an item to hold the value of ORDER_ID:

- **1.** Navigate to the Page Definition of page 2. Select **Edit Page** from the Developer Toolbar.
- 2. Under Items, click the Create icon.
- 3. On Choose Item Type, select Hidden and click Next.
- 4. For the Item Name, enter P2_ORDER_ID and click Next.
- 5. Click Create Item.

Add a Condition

To add a condition to the DEMO_ORDER_ITEMS report:

- 1. Under Regions, select Order Items.
- 2. Select the Query Definition tab.
- 3. Click Add/Modify Conditions.
- 4. On the Conditions page:
 - a. From the Columns list, select ORDER_ID [DEMO_ORDER_ITEMS].
 - **b.** Enter the following in the Conditions field:
 - = :P2_ORDER_ID
- 5. Click Apply Changes.

Modify the Region Title

To modify the region title of the DEMO_ORDER_ITEMS report:

- 1. Under Regions, click Order Items.
- 2. In Title replace this existing text with the following:

Order Items for Order # &P2_ORDER_ID.

3. Click **Apply Changes**.

Linking the DEMO_ORDERS Report to the DEMO_ORDER_ITEMS Report

Lastly, you link the DEMO_ORDERS report to the DEMO_ORDER_ITEMS report. To accomplish this, you edit the attributes of the ORDER_ID column on the DEMO_ORDERS report and create a link. The link will populate the P2_ORDER_ID hidden item on page 2 with the clicked ORDER_ID.

To create a link from the ORDER_ID column on the Orders report to the Order Items report:

- 1. Navigate to the Page Definition of page 1. Enter 1 in the Page field and click **Go**.
- 2. Under Regions, select Orders.
- 3. Click the **Report Attributes** tab.
- 4. Click the Edit icon adjacent to ORDER_ID.
- 5. Scroll down to Column Link:
 - **a.** In the Page field, select **2**.
 - **b.** From the Item 1 Name list, select **P2_ORDER_ID**.
 - c. From the Item 1 Value list, select **#ORDER_ID#**.
 - d. From the Link Text list, select **#ORDER_ID#**.
- 6. Click Apply Changes.
- 7. Click the **Run Page** icon.

As shown in Figure 3–3 on page 3-6, you can link to page 2 by clicking on an Order Id.

Order Id	Order Total	Cust Last Name	Order Timestamp
<u>1</u>	1200	Dulles	05-JAN-05
2	599	Hartsfield	31-DEC-04
<u>3</u>	1999	Hartsfield	26-DEC-04
<u>4</u>	750	Logan	21-DEC-04
<u>5</u>	40	Logan	16-DEC-04
<u>6</u>	250	OHare	11-DEC-04
<u>7</u>	3800	LaGuardia	06-DEC-04
<u>8</u>	40	Lambert	01-DEC-04
<u>9</u>	450	Lambert	26-NOV-04
<u>10</u>	500	Bradley	21-NOV-04

Figure 3–3 DEMO_ORDERS Report with Link to Page 2

4

How to Control Form Layout

Data and form elements in an Oracle HTML DB application are placed on a page using containers called regions. There are several attributes that control the placement and positioning of regions on pages. In turn, placement and style of form elements inside of regions is controlled by item attributes.

This tutorial describes the steps to create a data input form and how to change its layout by changing region and item attributes.

This section contains the following topics:

- About Sample Application
- Creating a Table and Data Input Form
- Changing the Appearance of a Page by Altering Region Attributes
- Understanding How Item Attributes Effect Page Layout
- Adding a Region Header and Footer
- Making a Region Conditional
- Adding Another Region for HTML Text
- Changing Item Types
- About Label Templates
- Changing Buttons

About Sample Application

Oracle HTML DB installs with a number of demonstration applications. To complete this exercise you must install the demonstration application, *Sample Application*.

To see if *Sample Application* is installed:

- **1.** Log in to Oracle HTML DB.
- 2. From the Workspace Administration list, select **Review Demonstration Applications**.
- **3.** Locate Sample Application and check the Status column:
 - **a.** If the Status column displays **Installed**, return to the Workspace home page.
 - **b.** If the Status column displays **Not Installed**, select **Install** in the Action column.
 - **c.** Follow the on-screen instructions.

Creating a Table and Data Input Form

The first step in creating a data input form is to create the underlying data objects in SQL Workshop. In this exercise, you create a table named HT_EMP and then use a wizard to create a new page.

Topics in this section include:

- Create the HT_EMP Table
- Create a New Page Containing a Input Form
- Run the Page

Create the HT_EMP Table

To create the HT_EMP table and the appropriate associated objects:

- 1. Click SQL Workshop on the Workspace home page.
- 2. Under SQL Scripts, click Scripts.
- 3. When the Script Repository appears, click Create.
- 4. In the Create Script Wizard:
 - a. For Script Name, enter HT_EMP and click Next.
 - **b.** In Script, enter the following DDL:

```
CREATE TABLE ht_emp (
  EARLE TABLE INC_emp_idNUMBERprimary key,emp_first_nameVARCHAR2(30) not null,emp_middle_initialVARCHAR2(1),emp_last_nameVARCHAR2(45) not null,
  emp_part_or_full_time VARCHAR2(1) not null check (emp_part_or_full_
time in ('P','F')),
  emp_salaryNUMBER,emp_dept.VARCHAR2(20) check (emp_dept in
('SALES','ACCOUNTING',
'MANUFACTURING', 'HR')),
   emp_hiredate DATE,
                            NUMBER references ht_emp,
   emp_manager
  emp_special_infoVARCHAR2(2000),emp_telecommuteVARCHAR2(1) check (emp_telecommute in ('Y')),rec_create_dateDATErec_update_datedate)
/
INSERT INTO ht_emp
  (emp_id, emp_first_name, emp_middle_initial, emp_last_name, emp_part_or_
full_time,
    emp_salary, emp_dept, emp_hiredate, emp_manager, emp_special_info, emp_
telecommute,
   rec_create_date)
VALUES
   (1, 'Scott', 'R', 'Tiger', 'F',
    100000, 'SALES', sysdate, null, 'cell phone number is xxx.xxx.xxxx
home phone is yyy.yyy.yyyy','Y',
    SYSDATE)
/
CREATE SEQUENCE ht_emp_seq
```

```
start with 2
/
CREATE OR REPLACE TRIGGER bi_ht_emp
    BEFORE INSERT ON ht_emp
    FOR EACH ROW
  BEGIN
     SELECT ht_emp_seq.nextval
      INTO :new.emp_id
       FROM DUAL;
     :new.rec_create_date := SYSDATE;
  END;
/
CREATE OR REPLACE TRIGGER bu_ht_emp
    BEFORE UPDATE ON ht_emp
    FOR EACH ROW
  BEGIN
     :new.rec_update_date := SYSDATE;
  END;
/
```

c. Click Create Script.

The script appears in the Script Repository.

- **5.** Run the HT_EMP script:
 - a. In the Script Repository, click **Run** in the Actions column adjacent to the HT_ EMP script.
 - **b.** From Parse As, select the schema owner that was initially provisioned with your workspace.
 - c. Click Run Script.

Red text indicates errors while executing the file.

Create a New Page Containing a Input Form

Next, create a new form using the Form on a Table or View Wizard.

To create a data input form:

- 1. Navigate to the Workspace home page.
- 2. From the Available Applications list, select Sample Application.
- 3. Click Create Page.
- 4. On Create New Page, select Page with Component and click Next.
- 5. On Select Component Type, select Form and click Next.
- 6. On Create Page, select Form on a Table or View and click Next.
- **7.** For Table/View Owner, select the schema owner used to create the HT_EMP table and click **Next**.
- 8. For Table/View Name, select the HT_EMP table and click Next.
- 9. On Identify Page and Region Attributes:
 - **a.** For Page, enter 900.
 - **b.** For the Page Name, enter HT_EMP.

- c. For the Region Name, enter How to Layout a Form.
- d. Click Next.
- 10. On Identify Tab, accept the default **Do not use tabs** and click **Next**.
- **11.** On Identify Primary Key, accept the default and click **Next**.

Note that the wizard reads the primary key from the database definition.

- 12. On Primary Key Default, accept the default Existing Trigger and click Next.
- 13. On Identify Columns to Include, select all columns and click Next.
- 14. On Identify Process Options, accept the defaults and click Next.
- **15.** On Identify Branching, set all branching to the page 900 (the page you are creating) and click **Next**.

Since this page is just for demonstration, you will not be utilizing branching.

- 16. Click Finish.
- 17. View the Page Definition by clicking Edit Page.

The Page Definition for page 900 appears.

- **18.** Delete the following validation:
 - Under Page Processing Validations, select P900_REC_CREATE_DATE not null.
 - Click Delete.

Run the Page

Once you create the HT_EMP table and page 900, the next step is to run the page.

To run the page from the Page Definition:

- 1. Click the **Run Page** icon in the upper right corner.
- **2.** If prompted to enter a username and password:
 - a. For User Name, enter either demo or admin.
 - **b.** For Password, enter the name of the current workspace using all lowercase letters.
 - c. Click Login.
 - **d.** Navigate to page 900:
 - Select Edit Page from the Developer Toolbar.
 - In Page, enter 900 and click Go.
 - **e.** On the Page Definition for page 900, click the **Run Page** icon in the upper right corner.

As shown in Figure 4–1, note that the HT Emp form contains basic employee details and includes select lists, text areas, and display only items.

How to Layout a For	n
Cancel Create	
Emp First Name	
Emp Middle Initial	
 Emp Last Name 	
* Emp Part Or Full Time	
Emp Salary	
Emp Dept	
Emp Hiredate	
Emp Manager	
Emp Special Info	×
Emp Telecommute	
• <u>Rec Create Date</u>	
Rec Update Date	

Figure 4–1 HT_EMP Form

By default, the Primary Key column does not display since it is assumed that the primary key is system generated. In reality, the primary key is included in the page, but appears as a hidden item.

Notice that the page defaults with one item for each row and labels display to the left of the items. The item labels default to the column names with initial capitalization and with the underscores (_) replaced with spaces. You can override this default behavior by configuring user interface defaults for the table.

Also notice that items based on date columns default to include a date picker. Lastly, notice that the Emp Special Info item was created as a text area because of the size of the base column. This item type is a better choice for large text items since it allows for wrapping of input text.

Changing the Appearance of a Page by Altering Region Attributes

You can alter the appearance of a page by changing the region attributes.

To change the region title and other region level attributes:

- **1.** Navigate to the Page Definition for page 900. Click **Edit Page 900** on the Developer Toolbar.
- 2. Under Regions, select How to Layout a Form.

The Region Definition appears.

- 3. Change the Title to Employee Info.
- 4. From Display Point, temporarily move the region by selecting **Page Template Region Position 3**.

This moves the region to the right side of the page. The region display points are determined by the page level template. If you do not select a page level template, Oracle HTML DB uses the default page level template defined in the current theme. You can view specific positions by selecting the flashlight icon to the right of the Display Point list.

Next, temporarily change the region template.

- 5. From Template select Borderless Region.
- 6. Click Apply Changes.
- 7. From the Page Definition, click the **Run Page** icon. (See Figure 4–2.)

Figure 4–2 HT_EMP Form with New Template

Employee Info	
Cancel Create	
	_
* Emp First Name	
Emp Middle Initial	
Emp Last Name	
* Emp Part Or Full Time	
Emp Salary	
Emp Dept	
Emp Hiredate	
Emp Manager	
Emp Special Info	*
Emp Telecommute	
* Rec Create Date	
Rec Update Date	

To return the region template and display point to the original selections:

- 1. Navigate to the Page Definition for page 900. Click **Edit Page 900** on the Developer Toolbar.
- 2. Under Regions, select Employee Info.
- 3. From the Template list, select Form Region.
- **4.** From the Display Point List, select **Page Template Body (3. Items above region content)**.
- 5. Click Apply Changes.

Understanding How Item Attributes Effect Page Layout

Item attributes control the display of items on a page. Item attributes determine where a label displays, how large an item will be as well as whether the item displays next to or below a previous item. You can change multiple item labels at once on the Page Items summary page.

Topics in this section include:

- Edit Item Attributes
- Fix Item Alignment
- Change Label Placement
- Change Items to Display-only
Edit Item Attributes

To edit item attributes:

- 1. Navigate to the Page Definition for page 900.
- 2. On the Page Definition, select the title Items.

The Page Items summary page appears.

You change how a page appears by editing the item attributes. Common item attribute changes include:

- Changing item labels by editing the Prompt field.
- Placing more than one item in certain rows to group like items together. For example, you could group all items that make up an employee's name.
- Changing the item width. Many items display better when they have a width that is less than the maximum. To change the item width, enter a new value in the Width field.
- Reordering the items. The initial order of items is based on the order of the columns in the table on which the region is based. You can reorder items by changing the sequence. You can reorder items by entering a new value in the Sequence field.
- **3.** To see the how item attributes affect page layout, make the following changes:
 - **a.** Change the values in the Prompt, New Line, and Width fields to match those in Table 4–1:

Prompt Field	New Line	Width
Emp ID	Yes	30
First Name	Yes	15
Middle Initial	No	2
Last Name	No	15
Part or Full Time	Yes	2
Salary	Yes	10
Department	Yes	15
Hire Date	Yes	10
Manager	No	15
Special Information	Yes	60
Telecommute	Yes	2
Record Create Date	Yes	10
Record Update Date	Yes	10

Table 4–1 New Prompt, New Line, and Width Field Values

b. Click **Apply Changes**.

c. Click the Run Page icon. (See Figure 4–3.)

Telecommute		
Create Date		
Update Date		

Figure 4–3 HT_EMP After Editing the Prompt, New Line, Width Attributes

Note that some items are pushed too far to the right. This display is caused by the width of the Special Information item. Oracle HTML DB lays out regions as tables and of a width of each column is determined by the largest display width of the items in that column.

Fix Item Alignment

There are several approaches to fixing item alignment:

 For the items Middle Initial, Last Name and Manager items, set New Field to equal No.

This places the items directly after the items they follow, but in the same column. This approach is best used for positioning embedded buttons next to items. Note that this setting can make text items appear squashed.

Change the Column Span field of the Special Information item.

For example, setting the Column Span for the Special Information item to 5 would enable multiple items to display above and below it. This change causes five items to display above Special Information (First Name, Middle Initial, and Last Name).

Be aware, however, that using Column Span to fix the display of the name does not result in a consistent layout. The Manager item would still be in the same column as Middle Initial. Because the Manager item is larger than Middle Initial, Last Name would still be pushed too far to the right. To fix this, you could change the Column Span of the Manager item to 3 so it displays above Special Information.

Reset the column width in the middle of the region by adding an item of type Stop and Start HTML Table. This forces the close of an HTML table using the tag and starts a new HTML table. Inserting a Stop and Start HTML Table item just after the Last Name item, results in an even layout. Note that a Stop and Start HTML Table item only displays its label. You can prevent the label from displaying at all by setting it to null. To do this, you simply remove the defaulted label.

To add a Stop and Start HTML Table item and reset the column width:

1. Navigate to the Page Definition for page 900.

- 2. Under Items, click the Create icon.
- **3.** From the Tasks list, select **Create "stop and start" HTML table control**. The Create Page Item wizard appears.
- 4. On Identify Item Name and Display Position:
 - a. In Sequence, enter 4.5.
 - b. From Region, select Employee Info.
 - c. Click Next.
- 5. On Identify Item Attributes:
 - **a.** For Label, remove X.
 - b. Accept all other defaults and click Next.
- 6. Click Create Item.

The Page Definition appears.

- **7.** Click the title **Items**.
- 8. For Special Information, change the Column Span to 3 and click Apply Changes.
- 9. Click the Run Page icon.

Change Label Placement

Item labels can display above, below, or to the left of an item. Labels can display left, right, or center justified. For labels set to left, you can further specify the vertical alignment options of top, bottom or center. Change the position of the Special Information label to above the item.

To change the placement of the Special Information label:

- 1. Navigate to the Page Definition for page 900.
- 2. Under Items, select the name of item P900_EMP_SPECIAL_INFO.
- **3.** Scroll down to Label.
- 4. From the Horizontal/Vertical Alignment list, select Above.
- 5. Click Apply Changes.

Change Items to Display-only

There are two columns in the HT_EMP table for auditing, Record Create Date and Record Update Date. Because the values of these columns are set with triggers, these columns should not be updatable by users. This exercise describes how to make items display-only and then how to add them to their own region.

To make an item P900_REC_CREATE_DATE display-only:

- 1. Navigate to the Page Definition for page 900.
- 2. Under Items, select the item P900_REC_CREATE_DATE.
- 3. Under Display As, select Text Field (Disabled, saves state).
- 4. Click Apply Changes.

To make an item P900_REC_UPDATE_DATE display-only:

1. Navigate to the Page Definition for page 900.

- 2. Under Items, select the item P900_REC_UPDATE_DATE.
- 3. Under Display As, select Text Field (Disabled, saves state).

4. Click Apply Changes.

Next, create a new region and then move the audit items into that region. To create a new region:

- **1.** Navigate to the Page Definition for page 900.
- 2. Under Regions, click the Create icon.
- 3. On Identify Region Type, select HTML and click Next.
- 4. On Region Type, select HTML and click Next.
- 5. For the Title, enter Audit Information and click Next.
- 6. Click Create Region.

To move the items to the new region:

- 1. Navigate to the Page Definition for page 900.
- 2. Select the heading Items.

A summary page appears.

- **3.** For P900_REC_CREATE_DATE and P900_REC_UPDATE_DATE:
 - **a.** Under Prompt, add a colon to the end of the label name.
 - b. Under Region, select Audit Information.
 - c. Click Apply Changes.

Figure 4–4 demonstrates how these items would display in a running page.

Figure 4–4 Audit Information Region

Audit Information

<u>Record Create Date:</u>
 <u>Record Update Date:</u>

The Hide/Show Region template enables the user to click a plus (+) sign to expand the contents of the region or click a minus (-) sign to hide the contents. By changing the region template to Hide/Show Region, users can decide whether they wish to see the Audit Information region.

To change the region template to Hide/Show Region:

- **1.** Navigate to the Page Definition for page 900.
- 2. Under Regions, select Audit Information.
- **3.** Under User Interface Attributes, select **Hide and Show Region** from the Template list.
- 4. Click Apply Changes.

Adding a Region Header and Footer

Regions can have headers and footers. Headers and footers typically contain text or HTML that displays at either the top or bottom of the region.

To add a region footer:

- **1.** Navigate to the Page Definition for page 900.
- 2. Under Regions, select Audit Information.
- 3. Scroll down to Header and Footer Text.
- 4. Enter the following in Region Footer:

<i>The Record Create Date is the date that the record was initially entered in to the system.
 The Record Update Date is the date that the record the record was last updated.</i>

- 5. Click Apply Changes.
- 6. Run the page.
- 7. Expand the Audit Information region.

Figure 4–5 Audit Information Region with Footer

▼ Audit Information
<u>Record Create Date:</u> <u>Record Update Date:</u> <u>The Record Update Date:</u> The Record Update Date is the date that the record upe initially entered in to the system
The Record Update Date is the date that the record was initially entered in to the system. The Record Update Date is the date that the record the record was last updated.

As shown in, the text of the footer is wrapped with the italic HTML tag and there is an imbedded a break. Without the manual break, the text would take up the entire width of the region (as defined by region template).

Making a Region Conditional

To accomplish this, you create a display condition for the Audit Information region so that it only displays if the Employee ID is not null. Since the Employee ID is set by a trigger, it only exists for records retrieved from the database. You can control the display of the Audit Information region by using a built-in condition that checks for the presence of a value for the item containing the Employee ID (that is, P900_EMP_ID)

To display the Audit Information region conditionally:

- 1. Navigate to the Page Definition for page 900.
- 2. Under Regions, select Audit Information.
- 3. When the Region Definition appears, scroll down to Conditional Display.
- 4. Under Conditional Display:
 - a. From the Conditional Display list, select Value of Item in Expression 1 is NOT NULL.
 - **b.** In Expression 1, enter:

P900_EMP_ID

5. Click Apply Changes.

Adding Another Region for HTML Text

You have the option of displaying regions in columns as well as in rows. This exercise explains how to create another region to display hint text to the user.

To create a region to display hint text:

- 1. Navigate to the Page Definition for page 900.
- 2. Under Regions, click the Create icon.
- 3. On Identify Region Type, select HTML and click Next.
- 4. On Region Type, select HTML and click Next.
- 5. On Identify Region Attributes:
 - a. In Title, enter Hint.
 - b. From Region Template, select Sidebar Region.
 - c. From Column, select 2.
 - d. Click Next.
- 6. In Enter HTML Text Region Source, enter the following:

Use this page to enter and
 maintain employee information.

- 7. Click Create Region.
- **8.** Run the page. (See Figure 4–6.)

Figure 4–6 Page 900 with Hint Region

Employee Info	Hint

Special Information	
Telecommute	

Changing Item Types

This exercise describes how to change item types to make data entry easier for the user. To change an item type, navigate to the Item attributes page and select another Display As option.

Topics in this section include:

- Change an Item to a Radio Group
- Change an Item to a Select List
- Change an Item to a Check Box

Change an Item to a Radio Group

Because the Part or Full-time item only has two valid choices, this item is a good candidate for either a check box or a radio group.

To change the Part or Full-time item to a radio group:

- 1. Navigate to the Page Definition.
- 2. Under Items, select P900_EMP_PART_OR_FULL_TIME.
- 3. From Display As, select Radiogroup.
- 4. For Label, remove the label text. (It will be redundant.)
- 5. Under List of Values, create a static list of values:
 - From Named LOV, select Select Named LOV
 - In List of values definition, enter:

STATIC:Full-time;F,Part-time;P

This definition will display as two radio buttons with the labels **Full-time** and **Part-time**, but the value that being inserted into the database will be either F or P.

- 6. Click Apply Changes.
- **7.** Run the page. (See Figure 4–7.)

Employee Info	
Cancel Create	
* First Name Middle Initial * Last Name	
○ Full-time ○ Part-time	
Salary	
Deptartment	
Hire Date Manager	
Special Information	
	3
Telecommute	

Notice that Full-time and Part-time displays as radio group that is stacked in one column. You can have these button display side by side.

To display the Full-time and Part-time radio buttons display side by side:

- **1.** Navigate to the Page Definition for page 900.
- 2. Under Items, select P900_EMP_PART_OR_FULL_TIME.
- 3. Scroll down to Lists of Values.

- 4. Set Columns to 2.
- 5. Click Apply Changes.

By changing this setting to match the number of valid values (that is, Full-time and Part-time), the values display side by side.

Change an Item to a Select List

In the DDL you used to create the HT_EMP table, Department is validated by a check constraint. You can implement Department as a radio group, a select list, or a Popup LOV.

To change Department to a select list:

- 1. Navigate to the Page Definition for page 900.
- 2. Under Items, select P900_EMP_DEPT.
- 3. From Display As, select Select List.

The other Select List choices are for either redirecting the user to another page or URL based on the selection, or submitting the current page which is used when other information needs to be retrieved based upon the selection in the Select List.

- 4. Under Lists of Values, create a static list of values:
 - a. From Named LOV, select Select Named LOV
 - **b.** In List of values definition, enter:

STATIC: SALES, ACCOUNTING, MANUFACTURING, HR

- c. From Display Null, select Yes.
- d. In Null display value, enter:
 - No Assignment -

The last two selections take into account that the EMP_DEPT column can contain nulls. As a best practice, whenever you implement a select list and have a column that can be null, you should set Display Null to Yes. Failure to do so, results in the item defaulting to the first item in the select list.

- 5. Click Apply Changes.
- **6.** Run the page. (See Figure 4–8.)

Employee Info		
Cancel Create		
* <u>First Name</u>	Middle Initial	* Last Name

Hire Date ACCOUNTING	t- Mana	ger
Special Informat HR		
	16	ж. Т
Telecommute]	

Figure 4–8 Department Changed to a Select List

Change an Item to a Check Box

The item Telecommute is ideal for a check box. When you change the Display Type, you can also move it up on the page and place is next to the Full-time and Part-time radio group.

To change Telcommute to a check box:

- 1. Navigate to the Page Definition for page 900.
- 2. Under Items, select P900_EMP_TELECOMMUTE.
- 3. From Display As, select Checkbox.
- 4. Under Displayed:
 - **a.** In Sequence, enter 5.5.
 - b. From Begin on New Line, select No
- 5. Scroll down to List of Values.
- **6.** To have the label precede the check box:
 - a. From Named LOV, select Select Named LOV
 - **b.** In List of values definition, enter:

STATIC:;Y

This displays the check box after the label, but will not display a value associated with the check box. If the check box is checked, the value passed to the database will be Y.

- 7. Click Apply Changes.
- **8.** Run the page.

About Label Templates

You can control the look of an item label by using a label template. *Sample Application* includes two label templates:

- Required Label
- Not Required Label

The Required Label template prepends a red asterisk (*) to the label. You may also create your own label templates to control the look of labels using different fonts, borders, backgrounds, and images.

To change to a different label template:

- 1. Navigate to the Page Definition for page 900.
- 2. Under Items, select an item name.
- 3. Scroll down to Label and make a selection from the Template list.
- 4. Click Apply Changes.
- 5. Run the page.

Changing Buttons

The wizard that created the form in this tutorial also created buttons. These buttons display conditionally based upon whether the page is being used to create a new record (that is P900_EMP_ID equals null), or the page is being used to update an existing record. These buttons were created as HTML buttons and positioned at the top of the region.

You can also position buttons at the bottom of the region, to the left or right of the page title, above the region, below the region, or in any button position defined in the region template.

To change a button position:

- 1. Navigate to the Page Definition for page 900.
- **2.** Click the heading **Buttons**.
- **3.** Make a new selection from the Position column.
- 4. Click Apply Changes.
- 5. Run the page.

Buttons can also have templates associated with them to refine how they look.

Running the Page for Update

You can run the page and provide it with an Employee ID to retrieve. Typically, this would be done with a link from a report page but for this example, run the page and add ::::P900_EMP_ID:1 to the end of the URL. For example:

http://marvel.oracle.com/pls/otn/f?p=9659:900:1284393467360777225::::P900_EMP_ID:1

This will pass the value 1 to the item P9000_EMP_ID. If you run the page note that the Delete and Apply Changes buttons now display. The Create button appeared previously because the page was expecting a new record to be created. Also note a Record Create Date now appears.

Making Data Bold

One way to make the information in a region easier to read, is to make the labels (or the data) more pronounced. You can accomplish this by changing the color, specifying another font, or using bold. To make a label bold, you could bold the data manually, or create a new label template. In the latter approach, you would create a new label

template that would wrap the HTML tag for bold around the label and then associate that template with the items in the Audit Information region.

To make data bold manually:

- **1.** Navigate to the Page Definition.
- **2.** Under Items, select an item name.
- **3.** Scroll down to Element.
- **4.** In HTML Form Element Attributes, type:

class="fielddatabold"

This example references a class in the Cascading Style Sheet associated with this application.

How to Work with Check Boxes

In Oracle HTML DB, you can create check boxes as form elements, or you can create check boxes in reports. Check boxes on a form work similarly to lists of values. When you define an item to be a check box, you need to provide the check box values in the List of Values section of the Item Attributes page. You define check boxes on a report using the supplied function HTMLDB_ITEM.CHECKBOX.

This tutorial illustrates the different ways you can create check boxes within the demonstration application, *Sample Application* and explains how to reference and process the values of checked boxes.

This section contains the following topics:

- Accessing Sample Application
- Creating a Single Value Check Box on a Form
- Creating Multi Value Check Box to Filter Content
- Adding Check Boxes to Each Row in the Report

Accessing Sample Application

To access Sample Application:

- 1. Log in to Oracle HTML DB.
- 2. From the Workspace Administration list, select **Review Demonstration Applications**.
- 3. Locate Sample Application and check the Status column:
 - a. If the Status column displays Installed, click Run in the Action column.
 - **b.** If the Status column displays **Not Installed**, select **Install** in the Action column. When the Application Builder home page appears, click the **Run** icon.
- 4. When prompted, enter the appropriate username and password and click Login
 - For User Name, enter either demo or admin.
 - For Password, enter the name of the current workspace using all lowercase letters.
- 5. Navigate to the product information page by clicking the **Products** tab.
- 6. Click the Edit icon to the left of a product.

As shown in Figure 5–1 on page 5-2, note that Product Available is a radio group. In this exercise that follows you will change this item to a check box.

Figure 5–1 Products Available Radio Group

Product Available Y O N 	
List Price 1200	

Creating a Single Value Check Box on a Form

In this exercise you change the Product Available radio group to a check box and then change the position of the label.

Topics in this section include:

- Change Product Available Radio Group to a Check Box
- Alter the Check Box Position
- Change Default Check Box Behavior

Change Product Available Radio Group to a Check Box

To change the Product Available radio group to a check box:

- **1.** Navigate to the Page Definition for page 6. Select **Edit Page 6** from the Developer Toolbar.
- 2. Under Items, select P6_PRODUCT_AVAIL.
- 3. From Display As, select Checkbox.
- 4. Scroll down to List of Values.
- **5.** Under List of Values:
 - a. From Named LOV, select Select Named LOV.
 - **b.** In List of values definition, enter:
 - STATIC:;Y
- 6. Click Apply Changes.

The Page Definition appears.

7. Run the page by clicking the **Run Page** icon.

As shown in Figure 5–2, note that the Product Available item now displays as a check box.

Add/Modify Products	
Cancel Delete Apply Changes	
* Product Name 3.2 GHz Desktop PC

	v
◆ <u>Category</u> Computer ▼	
Product Available	
List Price 1200	

Figure 5–2 Product Available Item as a Check Box

Alter the Check Box Position

Next, you move the check box label to the right side of the check box.

To change the position of the check box label:

- **1.** Navigate to the Page Definition for page 6. Select **Edit Page 6** from the Developer Toolbar.
- 2. Under Items, select P6_PRODUCT_AVAIL.
- 3. For Label, delete the text Product Available.
- **4.** Under List of Values, change the List of values definition to:

STATIC:Product Available;Y

- 5. Click Apply Changes.
- 6. Run the page by clicking the **Run Page** icon.

As shown in Figure 5–3, note that the label Product Available now displays to the right of the check box.

Figure 5–3 Product Available Label Moved to the Right

Add/Modify Products
Cancel Delete Apply Changes
Product Name 3.2 GHz Desktop PC
All the options, this machine is loaded!
Product Description
* Category Computer
🗖 Product Available
List Price 1200

Removing the label and adding the display value to the LOV causes the HTML DB engine to render the check box first and then the display value, Product Available.

Change Default Check Box Behavior

In certain circumstances, you may want a check box to be enabled by default. You can accomplish this by setting the default value attribute of the check box item. One disadvantage of this approach is that you need to perform some extra steps to disable it. Because of the way you defined the Product Available check box, it is virtually impossible to disable it.

Consider the following example:

- 1. Navigate to the Home page by selecting the **Home** tab.
- 2. From the Tasks list, select Add a New Product.
- 3. On the Add/Modify Product page:
 - a. Fill in the required fields (fields marked with an asterisk).
 - **b.** Disable the **Product Available** check box.
 - c. Click Create.
- 4. Disable the Product Available check box again and click Apply Changes.

The Product Page appears.

5. Select the Edit icon for product you just added.

Notice that the Product Available check box is enabled even though you disabled it twice when you added the product. This behavior results from the fact:

- The Product Available check box has a default value of Y.
- When Product Available is NULL, it defaults to the default value Y which enables the check box.

Add a Computation

You can alter this behavior by adding a computation that remembers the state of the check box.

To add a computation that tracks the state of the check box:

- 1. Navigate to the Page Definition for page 6. Select **Edit Page 6** from the Developer Toolbar.
- 2. Under Computations, click the **Create** icon.
- 3. For Location, select Item on This Page and click Next.
- **4.** On Identify Item:
 - a. For Computer Item, select P6_PRODUCT_AVAIL.
 - b. For Computation Point, select After Submit.
 - c. For Computation Type, select Static Assignment.
 - d. Click Next.
- 5. For Computation, enter the following and click Next.
 - Ν

Note: A static assignment of an item needs to be something other than Y or NULL.

Next, create a condition that controls when the computation executes.

- 6. On Identify Condition:
 - a. For Condition Type, select Value of Item in Expression 1 is NULL.
 - **b.** In Expression 1, enter:
 - P6_PRODUCT_AVAIL

Because of these settings, this computation will only execute when the value of the check box item, P6_PRODUCT_AVAIL is NULL.

7. Click Create.

Add another product as you did in the previous procedure. Notice that this time the Product Available check box is not automatically selected.

Creating Multi Value Check Box to Filter Content

In the next exercise, you create a multiple check boxes on the Product page. This check box will enable users to filter the report by selecting a category.

Topics in this section include:

- Create a Multi Value Check Box
- Alter Check Box Display Values
- Change Where the Check Boxes Display
- Create a Go Button to Submit the Page
- Adjust Default Check Box Behavior

Create a Multi Value Check Box

To create muli value check box:

- **1.** Navigate to the Page Definition for page 3.
- **2.** Under Items, click the **Create** icon.
- 3. For Choose Item Type, select Check Box and click Next.
- 4. On Identify Item Name and Display Position:
 - a. For Item Name, enter P3_SHOW.
 - **b.** For Region, select **Products 1.10**.
 - c. Click Next.
- 5. On Identify List of Values:
 - a. For Display Null Option, select No.
 - **b.** In List of Values Query, enter:

SELECT distinct category a, category b FROM demo_product_info ORDER BY 1

Note that to create a multi value check box, the List of Values query needs to return more than one row.

c. Click Next.

- 6. On Identify Item Attributes:
 - **a.** For Label, remove the default text by clicking **Clear**.
 - **b.** Click **Next**.
- 7. On Identify Item Attributes:
 - a. For Item Source, select Static Assignment.
 - **b.** For Item Source Value, enter:

Audio:Computer:Phones:Video

When a multi value check box is submitted, the value of the item is a colon delimited string of values. Using this string as the source will ensure all boxes are checked when HTML DB engine renders the page.

c. Click Create Item.

Alter Check Box Display Values

To edit check box display values (or labels) to appear in bold:

- **1.** Navigate to the Page Definition for page 3.
- 2. Under Items, select P3_SHOW.
- 3. Scroll down to Element.
- 4. In Form Element Option Attributes, enter:

class="fielddatabold"

Form Element Option Attributes are used exclusively for check boxes and radio buttons and control the way the HTML DB engine renders individual options.

5. Click Apply Changes.

Change Where the Check Boxes Display

Next, you edit attributes so that the category check boxes display above the report. To accomplish this, you need to change the Display Point attribute of the region associated with P3_SHOW.

To change the display point of the Products region:

- 1. Navigate to the Page Definition for page 3.
- 2. Under Region, select Products.
- 3. From Display Point, select Page Template Body (3. items above region content).
- 4. Click Apply Changes.

If you ran page 3 now, you would notice the category check boxes display vertically. Next, you will change the display so the category check boxes display horizontally.

To alter where the category check boxes display:

- 1. Navigate to the Page Definition for page 3.
- 2. Under Items, select P3_SHOW.
- 3. Scroll down to List of Values.
- **4.** In Columns, enter 4.

5. Click Apply Changes.

Create a Go Button to Submit the Page

In order for the report to be driven by the product category check boxes, you need to submit the page.

To create a button to submit the page:

- **1.** Navigate to the Page Definition for page 3.
- 2. Under Buttons, click the Create icon.
- 3. For Select a region for the button, select Products 1.10 and click Next.
- 4. For Task, select **Create a button displayed among this region's items** and click **Next**.
- 5. On Identify Button within Items Attributes:
 - **a.** For Button Name, enter P3_G0.
 - **b.** In Sequence, enter 40.
 - c. Click Create Button.

Next, you need to create a branch to tell the HTML DB engine where to go after the user clicks the Go button.

To create a branch to page 3:

- **1.** Navigate to the Page Definition for page 3.
- 2. Under Branches, click the Create icon.
- 3. On Identify Branch Point and Type, accept the defaults and click Next.
- 4. For Page, select 3 and click Next.
- 5. Click Create Branch.

In order to generate a report based on the category check box values, you need to change the report query.

To edit the report query:

- 1. Under Region, select Products.
- 2. Scroll down to Region Source.
- 3. In Region Source, change the WHERE clause to read:

WHERE p.image_id = i.image_id (+)
AND instr(':'||:P3_SHOW||':',category) > 0

- 4. Click Apply Changes.
- 5. Run the page by clicking the **Run Page** icon.

As shown in Figure 5–4, notice you can filter the report by selecting a category check box at the top of the page.

	Name	Description	<u>Category</u>	Available	Price	Image
P	3.2 GHz Desktop PC	All the options, this machine is loaded!	Computer	Y	\$1,200.00	
P	512 MB DIMM	Expand your PCs memory and gain more performance	Computer	Y	\$200.00	
P	Ultra Slim Laptop	The power of a desktop in a portable design	Computer	Y	\$1,999.00	

Figure 5–4 Product Page with Category Check Boxes and Go Button

Adjust Default Check Box Behavior

Although the category check boxes correctly filters the content on page 3, if you deselect all the check boxes, notice the report returns all products. This behavior results from the fact that if a check box has a NULL value (that is, it is deselected), it defaults to the default value Y. The default value of Y in turn enables the check box.

You can alter this behavior by adding a computation that remembers the state of the check box.

To add a computation that tracks the state of the check box:

- 1. Navigate to the Page Definition for page 3.
- 2. Under Computations, click the Create icon.
- 3. For Location, select Item on This Page and click Next.
- 4. On Identify Item:
 - a. For Computer Item, select P3_SHOW
 - b. For Computation Point, select After Submit.
 - c. For Computation Type, select Static Assignment.
 - d. Click Next.
- 5. On Identify Computation:
 - a. For Computation:

none(bogus_value)

b. Click Next.

Note: A static assignment of an item needs to be something other than Y or NULL.

Next, create a condition that controls when the computation executes.

- 6. On Identify Condition:
 - a. For Condition Type, select Value of Item in Expression 1 is NULL.
 - **b.** In Expression 1, enter:

```
P3_SHOW
```

As a result of these settings, this computation will only execute when the value of the check box item, P3_SHOW is NULL.

7. Click Create.

Run the page again and deselect all the category check boxes. Notice that this time the report contains the expected result (no returned records).

Adding Check Boxes to Each Row in the Report

In the next exercise you add a delete check box to each row in the Products report. To accomplish this you will edit the report query and make a call to HTMLDB_ITEM package.

HTMLDB_ITEM is a supplied package for generating certain form elements dynamically. In this instance, you will use HTMLDB_ITEM.CHECKBOX to generate check boxes in the Products report. When the page is submitted, the values of the check boxes are stored in global package arrays. You can reference these values using the PL/SQL variables HTMLDB_APPLICATION.G_F01 to HTMLDB_APPLICATION.G_F50 based on the p_idx parameter value that was passed in.

Topics in this section include:

- Call HTMLDB_ITEM.CHECKBOX
- Add a Button to Submit Check Box Array Values
- Add a Process

Call HTMLDB_ITEM.CHECKBOX

To edit the query to call HTMLDB_ITEM. CHECKBOX:

- **1.** Navigate to the Page Definition for page 3.
- 2. Under Regions, click Products.
- **3.** In Region Source, add the new line appearing in bold face to the query.

```
SELECT p.product_id edit_product, p.product_id view_product_id,
htmldb_item.checkbox(1,p.product_id) del,
p.product_name, p.product_description, p.category, p.product_avail, p.list_
price, '<img src="#OWNER#.custom_image_display?p_image_id=' || nvl(i.image_
id,0) || '"
height="50" width="50" />' img
FROM demo_product_info p, demo_images i
WHERE p.image_id = i.image_id (+)
AND instr(':'||:P3_SHOW||':',category) > 0
```

HTMLDB_ITEM is an Oracle HTML DB supplied package you can use to generate certain form elements dynamically. Note the value passed in for p_idx in the above example is 1. You will reference the check box values using the global variable HTMLDB_APPLICATION.G_F01 later on.

- 4. Select the **Report Attributes** tab.
- 5. Under Report Column Attributes, locate the Del column.
- 6. Click the Up arrow until the DEL column is directly beneath VIEW_PRODUCT_ID. (See Figure 5–5).

Figure 5–5 Report Column Attributes Page

	Alias	Link	Edit		Heading	Column Alignment	Heading Alignment
R	EDIT_PRODUCT	~				center 💌	center 💌
R	VIEW_PRODUCT_ID				ID	right 💌	center 💌
R	DEL				Del	left 💌	center 💌
R	PRODUCT_NAME				Name	left 💌	center 💌
R	PRODUCT_DESCRIPTION				Description	left 💌	center 💌

7. Click Apply Changes.

Add a Button to Submit Check Box Array Values

To add a button to submit the check box array values:

- 1. Navigate to the Page Definition for page 3.
- 2. Under Buttons, click the Create icon.
- 3. For Select a region for the button, select Products 1.10 and click Next.
- 4. For Task, select, select Create a button in a region position and click Next.
- 5. On Identify Button within Items Attributes:
 - **a.** For Button Name, enter DELETE_PRODUCTS.
 - **b.** For Label, enter Delete Products.
 - c. Click Next.
- 6. For Button Template, accept the default selection and click Next.
- 7. For Position, select Top of Region and click Next.
- 8. For Branch to Page, select 3 and click Create Button.

Add a Process

To add process that executes when the user clicks the Delete Products button:

- 1. Under Processes, click the Create icon.
- 2. On Select Process Type, select PL/SQL and click Next.
- 3. For Name, enter Delete Products.
- 4. Enter following PL/SQL process and click Next:

```
FOR i in 1..HTMLDB_APPLICATION.G_F01.count
LOOP
DELETE FROM demo_product_info
WHERE product_id = HTMLDB_APPLICATION.G_F01(i);
END LOOP;
```

HTMLDB_ITEM is an Oracle HTML DB supplied package you can use to generate certain form elements dynamically. When a page is submitted, the values of each column are stored in global package arrays, which you can reference using the PL/SQL variable HTMLDB_APPLICATION.G_F01 to HTMLDB_APPLICATION.G_F50. In this exercise, the value passed in for p_idx in EMPNO column is 1, so you

reference the EMPNO column values using the global variable HTMLDB_ APPLICATION.G_F01.

- **5.** On Identify Messages:
 - a. In Success Message, enter:

Product(s) deleted.

b. In Failure Message, enter:

Unable to delete product(s).

- c. Click Next.
- 6. Click Create Process.

If you run the page, the Delete Products button appears above the report. (See Figure 5–6). To remove a product from the report, select the **Del** check box and click **Delete Products**.

Figure 5–6 Products Report with Delete Products Check Box

Pro	duct	s					
						Delete	Products
	Audio	D Computer D Ph	ones 🗆 Video 🛛 Go	Category	Available	Price	Image
Ņ		3.2 GHz Desktop PC	All the options, this machine is loaded!	Computer	Y	\$1,200.00

6

How to Implement a Web Service

Web services enable applications to interact with one another over the Web in a platform-neutral, language independent environment. In a typical Web services scenario, a business application sends a request to a service at a given URL by using the HTTP protocol. The service receives the request, processes it, and returns a response. You can incorporate calls to external Web services in applications developed in Oracle HTML DB.

Web services in Oracle HTML DB are based on SOAP (the Simple Object Access Protocol). SOAP is a World Wide Web Consortium (W3C) standard protocol for sending and receiving requests and responses across the Internet. SOAP messages can be sent back and forth between a service provider and a service user in SOAP envelopes.

This tutorial illustrates how to call a Web service from within an Oracle HTML DB application.

Topics in this section include:

- About Creating Web Service References
- Creating a New Application
- Specifying an Application Proxy Server Address
- Searching a UDDI Registry for a Business Name
- Searching a UDDI Registry for a Service Name

Note: The SOAP 1.1 specification is a W3C note. (The W3C XML Protocol Working Group has been formed to create a standard that will supersede SOAP.)

For more information on Simple Object Access Protocol (SOAP) 1.1 see:

http://www.w3.org/TR/SOAP/

About Creating Web Service References

To utilize Web services in Oracle HTML DB, you create a Web service reference using a wizard. Each Web service reference is based on a Web Services Description Language (WSDL) document that describes the target Web service. When you create a Web service reference, the wizard analyzes the WSDL and collects all the necessary information to create a valid SOAP message.

When you create a Web service reference you need to decide how to locate the WSDL. You can locate a WSDL two ways:

By searching a UDDI registry for either a service name or business name.

A Universal Description, Discovery, and Integration (UDDI) registry is a directory where businesses register their Web services.

By entering the URL to the WSDL document.

In this tutorial you will create Web service references by searching a UDDI registry.

Creating a New Application

First, create a new application.

To create an application:

- 1. From the Application Builder home page, click **Create Application**.
- 2. On Select Creation Method, select From Scratch and click Next.
- 3. On Create Application:
 - a. For Name, enter Web Services.
 - **b.** From Pages, select **1**.
 - **c.** Click Next.
- 4. For Tabs, accept the default One Level of Tabs and click Next.
- 5. For Page Names, enter Web Services and click Next.
- 6. For Page Tab Name, enter Web Services and click Next.
- 7. On Theme, select Theme 2 and click Next.
- 8. Review your selections and click Create Application.

The Application Builder home page appears.

Specifying an Application Proxy Server Address

If your environment requires a proxy server to access the Internet, you must specify a proxy server address on the Application Attributes page before you can create a Web service reference.

To specify a proxy address for an application:

- 1. On the Application Builder home page, click Edit Attributes.
- 2. Under Application Definition, enter the proxy server in Proxy Server.
- 3. Click Apply Changes.

Searching a UDDI Registry for a Business Name

In this exercise you create a form which displays stock quotes based on a stock symbol you provide. You will create a Web service reference by searching the UDDI registry for a business name:

To create a Web service reference by search for a business name:

1. Navigate to the Application Builder home page.

- 2. Click Shared Components.
- 3. Under Logic, select Web Service References.

The Web Service References page appears.

- 4. Click Create.
- 5. When prompted whether to search a UDDI registry to find a WSDL, select **Yes** and click **Next**.
- 6. For UDDI Location, select IBM UDDI and click Next.
- 7. On Search for Services:
 - a. For Search Type, select Business Name.
 - **b.** In Name, enter:

%xMethods%

- c. Click Search.
- d. Under Matching Services, select xMethods Delayed Stock Quotes.
- e. Click Next.

A summary page appears describing the selected Web service.

8. Review your selection and click Next to continue.

The URL to the WSDL document displays in the WSDL Location field.

9. Click Finish.

Create a Form to Display a Stock Quote

Next, you will create a form to display a stock quote based on the stock symbol you provide.

To create a form after creating a Web Service Reference:

- 1. On Web Service Reference Added page, select Create Form on Web Service.
- 2. On Web Service Reference and Operation:
 - a. For Web Service Reference, select XMethods Delayed Stock Quotes.
 - b. For Operation, select getQuote.
 - c. Click Next.
- 3. For Identify Page and Region Attributes accept the defaults and click Next.
 - a. In Region Title, enter Get Stock Quote.
 - **b.** Accept the other defaults.
 - c. Click Next.
- 4. For Items for Input Parameters, accept the defaults and click Next.
- 5. For Items for Output Parameters:
 - **a.** For Item Label, enter Stock Price.
 - **b.** Accept the other defaults.
 - c. Click Finish.
- 6. Click **Run Page** to view the form.

7. On the Log in page, enter the User Name and Password for your workspace and click **Login**.

A form resembling Figure 6–1 appears.

Figure 6–1 Get Stock Quote Form

Get Stock Quote	Submit
Symbol	
Stock Price	

- **8.** Test the form. In Symbol, enter a stock symbol (such as ORCL) and click **Submit**. The associated stock price displays in the Stock Price field.
- **9.** Select **Edit Application** from the Developer toolbar to return to the Application Builder home page.

Searching a UDDI Registry for a Service Name

Next, you will create a form that displays market futures. In this exercise you will create a Web service reference by search a UDDI registry for a service name. Then, you will create a form and report.

To create a new Web service by searching for a service name:

- 1. Navigate to the Application Builder home page.
- 2. Click Shared Components.

The Shared Components page appears.

3. Under Logic, select Web Service References.

The Web Service References page appears.

- 4. Click Create.
- **5.** When prompted whether to search a UDDI registry to find a WSDL, select **Yes** and click **Next**.
- 6. For UDDI Location, select XMethods UDDI and click Next.
- **7.** On Search for Services:
 - a. For Search Type, select Service Name.
 - **b.** In Name, enter xignite and click **Search**.

This is a search engine for market news.

- c. Under Matching Services, select XigniteFutures.
- d. Click Next.

A summary page appears describing the selected Web service.

8. Review your selection and click **Next** to continue.

The WSDL Location field displays the URL to the WSDL document.

9. Click Finish.

The Web service reference, XigniteFutures, is added to the Web Service References Repository.

Create a Form and Report

Next, you need to create a page that contains a form and report.

To create a form and report after creating a Web Service Reference:

- 1. On Web Service Reference Added page, select **Create Form and Report on Web Service**.
- 2. On Web Service Reference and Operation:
 - a. For Web Service Reference, select XigniteFutures.
 - b. For Operation, select ListFuturesByExchange.
 - c. Click Next.
- 3. On Identify Page and Region Attributes:
 - a. Change Form Region Title to List Futures By Exchange.
 - b. Accept the other defaults and click Next.
- 4. For Items for Input Parameters:
 - **a.** For P2_USERNAME, P2_PASSWORD, P2_TRACER, select **No** in the Create column.
 - b. For P2_EXCHANGE, accept the default Yes in the Create column.
 - c. Click Next.
- 5. On Base Node:
 - a. For Temporary Result Set Name (Collection), accept the default.
 - b. Result Tree to Report On, select Future (tns:Future).
 - c. Click Next.
- 6. For Result Parameters to Display, select all the parameters and click Finish.
- 7. Click **Run Page** to view the form.
- **8.** If a Log in page appears, enter the User Name and Password for your workspace and click **Login**.

A form and report resembling Figure 6–2 on page 6-6 appears. Notice that the List Futures by Exchange Form on the top of the page contains a data entry field and a submit button, but the Results Report does not contain any data.

Figure 6–2 List Futures by Exchange Form and Report without Data

List Futures By Excha	nge		S	ubmit
Exchange				
Results No data found.				

9. Test the form. In Exchange, enter NYMEX and click **Submit**.

The report at the bottom of the page should resemble Figure 6–3. The report lists the symbol, name, month, and year of futures from the New York Mercantile Exchange (NYMEX).

Figure 6–3 List Futures by Exchange Form and Report with Data

NTERS									
.ist Futu	res By Exchange							Subn	nit
Exchange	NYMEX

How to Create a Stacked Bar Chart

A stacked bar chart displays the results of multiple queries stacked on top of one another (either vertically or horizontally). Using a stacked bar chart is an effective way to communicate the absolute values of data points represented by the segments of each bar, as well as the total value represented by data points from each series stacked in a bar.

In Oracle HTML DB, stacked bar chart is only available as an SVG chart. To create a stacked bar chart, you can create the chart as a stacked bar chart, or you can create a regular (non-HTML) bar chart and then add queries to it.

This tutorial describes how to create a stacked bar chart using existing data within the demonstration application, *Sample Application*.

This section contains the following topics:

- Accessing Sample Application
- Creating a Stacked Bar Chart
- Adding Additional Series
- Changing the Chart Format
- Viewing the Chart

Accessing Sample Application

To access Sample Application:

- **1.** Log in to Oracle HTML DB.
- 2. From the Workspace Administration list, select **Review Demonstration Applications**.
- 3. Locate Sample Application and check the Status column:
 - **a.** If the Status column displays **Installed**, click **Run** in the Action column.
 - **b.** If the Status column displays **Not Installed**, select **Install** in the Action column. When the Application Builder home page appears, click the **Run** icon.
- 4. When prompted, enter the appropriate username and password and click Login
 - For User Name, enter either demo or admin.
 - For Password, enter the name of the current workspace using all lowercase letters.

Creating a Stacked Bar Chart

To create the initial report, you can either add a region to an existing page and define it as a stacked bar chart, or you can create a new page. In this exercise, you create a new page within the Sample Application.

The chart will display the sum by product category for sales from within the Sample Application. It will contain sales for the twelve months prior to the current month. In the following exercise, you will create four queries (called series) for each of the product categories (phones, computers, audio, and video).

To create a new page:

- 1. Navigate to the Workspace home page.
- 2. From the Applications list, select Sample Application.
- 3. Click Create Page.
- 4. Select Page with Component and click Next.
- 5. On Select Component Type, select Chart and click Next.
- 6. Select Stacked Bar and click Next.
- 7. For Identify Page Attributes:
 - **a.** For Page, enter 750.
 - b. For Page Name, enter Revenue by Category.
 - c. For Region Name, enter Revenue by Category.
 - d. Click Next.
- 8. For Tab Options, accept the default **Do not use Tabs** and click **Next**.
- 9. On Series Query:
 - a. For Series Name, enter Phones.
 - **b.** In SQL, enter:

```
SELECT NULL 1,
      sales month,
      revenue
  FROM (
SELECT TO_CHAR(o.order_timestamp, 'Mon YYYY') sales_month,
       SUM(oi.quantity * oi.unit_price) revenue,
      TO_DATE(to_char(o.order_timestamp,'Mon YYYY'),'Mon YYYY') sales_
month_order
 FROM DEMO_PRODUCT_INFO p,
      DEMO_ORDER_ITEMS oi,
      DEMO_ORDERS O
WHERE o.order_timestamp <= (trunc(sysdate, 'MON')-1)
  AND o.order_timestamp > (trunc(sysdate-365, 'MON'))
  AND o.order_id = oi.order_id
  AND oi.product_id = p.product_id
  AND p.category = 'Phones'
GROUP BY TO_CHAR(o.order_timestamp, 'Mon YYYY')
ORDER BY sales_month_order
)
```

The syntax for the select of a chart is SELECT link, label, value. You must have all three and only three items in your select. Because there is no appropriate page to link to, the link is defined as null.

You cannot have an order by in the select statement for series in a stacked chart. The information will be displayed in alphabetical order and this does not work for dates (October displays before September). To get the data to display in chronological order, you need to order the data inside a nested select.

c. For When No Data Found Message, enter:

No orders found in the past 12 months.

- d. Click Next.
- 10. Review your selections and click Finish.

Adding Additional Series

Once you have created the new page with a region defining the query, you need to add the series. In the following exercise, you will add a series for each of the categories of product in the application (that is, computers, audio, and video). Note you have already created the phones category.

To add a series for computers category:

1. On the Success Page, select Edit Page.

The Page Definition for page 750 appears.

2. Under Regions, select Chart to the left of Revenue by Category.

Under Chart Series, notice that only one series appears.

- 3. Add a chart series for Computer. Under Chart Series, click Add Series.
 - a. For Series Name, enter Computer.
 - **b.** In SQL, enter:

```
SELECT NULL 1,
      sales month.
      revenue
  FROM (
SELECT TO_CHAR(o.order_timestamp, 'Mon YYYY') sales_month,
      SUM(oi.quantity * oi.unit_price) revenue,
      TO_DATE(to_char(o.order_timestamp, 'Mon YYYY'), 'Mon YYYY') sales_
month order
 FROM DEMO_PRODUCT_INFO p,
      DEMO_ORDER_ITEMS oi,
      DEMO_ORDERS O
 WHERE o.order_timestamp <= (trunc(sysdate, 'MON')-1)
  AND o.order_timestamp > (trunc(sysdate-365,'MON'))
  AND o.order_id = oi.order_id
  AND oi.product_id = p.product_id
  AND p.category = 'Computer'
GROUP BY TO_CHAR(o.order_timestamp, 'Mon YYYY')
ORDER BY sales_month_order
)
```

Note that this SQL matches the previous series. The only difference is that the category in the WHERE clause.

c. For When No Data Found Message, enter:

No orders found in the past 12 months.

- d. Click Apply Changes.
- 4. Add a chart series for Audio. Under Chart Series, click Add Series.
 - a. For Series Name, enter Audio.
 - **b.** In SQL, enter:

```
SELECT NULL 1,
       sales_month,
      revenue
  FROM (
SELECT TO_CHAR(o.order_timestamp, 'Mon YYYY') sales_month,
       SUM(oi.quantity * oi.unit_price) revenue,
       TO_DATE(to_char(o.order_timestamp,'Mon YYYY'),'Mon YYYY') sales_
month_order
 FROM DEMO_PRODUCT_INFO p,
      DEMO_ORDER_ITEMS oi,
      DEMO ORDERS O
WHERE o.order_timestamp <= (trunc(sysdate, 'MON')-1)
  AND o.order_timestamp > (trunc(sysdate-365,'MON'))
  AND o.order_id = oi.order_id
  AND oi.product_id = p.product_id
  AND p.category = 'Audio'
GROUP BY TO_CHAR(o.order_timestamp, 'Mon YYYY')
ORDER BY sales_month_order
)
```

c. For When No Data Found Message, enter:

No orders found in the past 12 months.

- d. Click Apply Changes.
- 5. Add a chart series for Video. Under Chart Series, click Add Series.
 - a. For Series Name, enter Video.
 - **b.** In SQL, enter:

```
SELECT NULL 1,
       sales_month,
       revenue
  FROM (
SELECT TO_CHAR(o.order_timestamp, 'Mon YYYY') sales_month,
       SUM(oi.quantity * oi.unit_price) revenue,
       TO_DATE(to_char(o.order_timestamp,'Mon YYYY'),'Mon YYYY') sales_
month_order
 FROM DEMO_PRODUCT_INFO p,
      DEMO_ORDER_ITEMS oi,
      DEMO_ORDERS o
WHERE o.order_timestamp <= (trunc(sysdate,'MON')-1)
  AND o.order_timestamp > (trunc(sysdate-365,'MON'))
  AND o.order_id = oi.order_id
  AND oi.product_id = p.product_id
  AND p.category = 'Video'
GROUP BY TO_CHAR(o.order_timestamp, 'Mon YYYY')
ORDER BY sales_month_order
)
```

c. For When No Data Found Message, enter:

No orders found in the past 12 months.

d. Click Apply Changes.

Changing the Chart Format

Next, you will enhance the appearance of the chart with axis titles by adding a region footer.

To format the Y axis:

- **1.** Scroll down to Axes Settings.
- 2. In Y Axis Format, enter:

FML999G999G999G999G990

This formats the sales_month column as money, but without displaying the cents

- **3.** Select the Region Definition tab.
- 4. Scroll down to Header and Footer Text. For Region Footer, enter:

Note: This reflects sales for the 12 months prior to the current month.

5. Click Apply Changes.

Viewing the Chart

Now that the chart is complete, you can view it.

To run the chart:

- 1. Click the Run Page icon in the upper right corner of the page.
- If you have already run Sample Application in this session, you will be taken to page 750. Otherwise, enter the appropriate username and password and click Login
 - For User Name, enter either demo or admin
 - For Password, enter the name of the current workspace using all lowercase letters
- **3.** Navigate to page 750.

As shown in Figure 7–1 on page 7-6, the Revenue by Category chart appears.

Figure 7–1 Revenue by Category Bar Chart

Tip: One way to navigate to a new page within a running application is to change the second parameter (the page identifier) to 750. For example, you would change:

http://htmldb.oraclecorp.com/pls/htmldb/f?p=2046:1: ...

to

http://htmldb.oraclecorp.com/pls/htmldb/f?p=2046:750: ...
How to Upload and Download Files in an Application

Oracle HTML DB applications may include the ability to upload and download files stored in the database. This tutorial illustrates how to create a form and report with links for file upload and download, how to create and populate a table to store additional attributes about the documents, and finally how to create the mechanism to download the document in your custom table.

This section contains the following topics:

- Creating an Application
- Creating an Upload Form
- Creating a Report with Download Links
- Storing Additional Attributes About the Document
- Store the Document in a Custom Table
- Downloading Documents from the Custom Table

Creating an Application

First, create a new application using the Create Application Wizard with the assumption you will include an upload form on page 2.

To create an application using the Create Application Wizard:

- 1. Navigate to the Workspace home page.
- 2. Click Create Application.
- 3. On Select Creation Method, select From Scratch and click Next.
- 4. For Name, enter Download App and click Next.
- 5. For Tabs, select No Tabs and click Next.
- 6. For Page Name, accept the defaults and click Next.
- 7. For Theme, select Theme 2 and click Next.
- 8. Click Create Application.

Creating an Upload Form

Once you create an application, the next step is to create a form to upload documents. In the following exercise you create a form in an HTML region that contains a file upload item and a button. The button submits the page and returns the user to the same page.

Topics in this section include:

- Create an HTML Region
- Create an Upload Item
- Create a Button

Create an HTML Region

To create an HTML region:

- 1. Navigate to the Page Definition of page 2.
- 2. Under Regions, click the Create icon.
- 3. On Identify Region Type, select HTML and click Next.
- 4. On Region Type, select HTML and click Next.
- 5. For the Region Title, enter **Submit File** and click **Next**.
- 6. Accepting the remaining defaults and click **Create Region**.

Create an Upload Item

To create a file upload item:

- 1. Navigate to the Page Definition of page 2.
- 2. Under Items, click the **Create** icon.
- 3. On Choose Item Type, select File Browse and click Next.
- **4.** For Item Name, enter P2_FILE_NAME and click **Next**.
- 5. Accept the remaining defaults and click Create Item.

Create a Button

To create a button:

- 1. Under Buttons, click the **Create** icon.
- 2. For the region, select **Submit File 1.10** and click **Next**.
- 3. For Task, select Create a button in a region position and click Next.
- 4. On Identify Button Name and Label:
 - a. For Button Name, enter Submit.
 - **b.** Accept the remaining defaults.
 - c. Click Next.
- 5. For Button template, accept the default and click Next.
- 6. On Display Properties, accept the defaults and click Next.
- 7. On Branching:
 - **a.** In Branch to Page, select **page 2**.
 - b. Click Create Button.

- 8. Run the page by clicking the **Run Page** icon.
- 9. When prompted for a user name and password:
 - a. For User Name, enter the name of your workspace
 - **b.** For Password, enter the password for your workspace
 - c. Click Login.

When you run the page, it should look similar Figure 8–1.

Figure 8–1 Submit File Form

Submit File	
File Name	Browse Submit

Creating a Report with Download Links

Once you create the form to upload documents, the next step is to create a report on the document table that contains links to download documents. When you use the file upload item type, the files you upload are stored in a table called wwv_flow_file_ objects\$. Every workspace has access to this table through a view called HTMLDB_ APPLICATION_FILES.

Topics in this section include:

- Create a Report on HTMLDB_APPLICATION_FILES
- Add Link to Download Documents

Create a Report on HTMLDB_APPLICATION_FILES

To create a report on HTMLDB_APPLICATION_FILES:

- **1.** Navigate to the Page Definition of page 2.
- 2. Under Regions, click the Create icon.
- **3.** On Identify Region Type, select **Report** and click **Next**.
- 4. From Report Implementation, select SQL Report and click Next.
- 5. For Region Title, enter Uploaded Files and click Next.
- 6. On Page Region Source, enter the following SQL query: SELECT id, name FROM HTMLDB APPLICATION_FILES
- 7. Click Create Region.
- 8. Run the page.

As shown in Figure 8–2, the report you just created shows all documents that have been uploaded. Next, you provide a link to download the document.

Figure 8–2 Uploaded Files Report

Submit File	
File Name	Browse Submit
Uploaded Files	
Uploaded Files ID	NAME
Uploaded Files ID 8827220875206572	NAME 8827220875206572_DDL_for_Issue_Management.sq

Add Link to Download Documents

To provide a link to download the documents in the report:

- **1.** Navigate to the Page Definition of page 2.
- 2. Under Regions, click **Q** next to Uploaded Files.
- 3. Under Report Column Attributes, click the Edit icon next to the ID column.
- 4. Scroll down to Column Link. Under Column Link:
 - a. In the Link Text field, enter: download
 - **b.** From Target, select **URL**.
 - c. In the URL field, enter the following: p?n=#ID#
- 5. Click Apply Changes.

When you run the page, it should look similar to Figure 8–3.

Storing Additional Attributes About the Document

Next, you create another table to store additional information about the documents that are uploaded. In this exercise you:

- Add an item to the upload form to capture the information
- Add a process to insert this information along with the name of the file
- Alter the SQL Report of uploaded files to join to the table containing the additional information

Topics in this section include:

- Create a Table to Store Document Attributes
- Create an Item to Capture the Document Subject
- Create a Process to Insert Information
- Showing Additional Attributes in the Report Region

Create a Table to Store Document Attributes

To create the table to store additional information about uploaded files:

- 1. Navigate to Workspace home page.
- 2. Click SQL Workshop.
- 3. Click SQL Command Processor.
- 4. In the SQL Statement field, enter

CREATE TABLE file_subjects(name VARCHAR2(4000), subject VARCHAR2(4000));

5. Click Run SQL.

Create an Item to Capture the Document Subject

To create an item to capture the subject of the document:

1. Navigate to the Page Definition of page 2.

- **2.** Under Items, click the **Create** icon.
- 3. On Choose Item Type, select Text and click Next.
- 4. On Pick Text Control, select Text Field and click Next.
- 5. On Identify Item Name and Display Position:
 - **a.** For Item Name, enter P2_SUBJECT.
 - b. From the Region list, select Uploaded Files.
 - c. Accepting the remaining defaults and click Next.
- 6. On Identify Item Attributes:
 - a. In the Label field, enter Subject.
 - **b.** Accepting the remaining defaults.
 - c. Click Next.
- 7. Click Create Item.

Create a Process to Insert Information

To create a process to insert the subject information into the new table:

- 1. Navigate to the Page Definition of page 2
- 2. Under Page Processing, Processes, click the Create icon.
- 3. On Select Process Type, click PL/SQL.
- **4.** On Identify Process Attributes:
 - a. For Name, enter Insert.
 - b. From Point, select On Submit After Computations and Validations.
 - c. For Type, select **PL/SQL anonymous block**.
 - d. Click Next.
- 5. On Identify Page Process, enter the following PL/SQL process: INSERT INTO file_subjects(name, subject) VALUES(:P2_FILE_NAME,:P2_SUBJECT);
- 6. On Identify Messages:
 - a. In the Success Message field, enter: Subject inserted
 - **b.** In the Failure Message field, enter:
 - Error inserting subject
 - c. Click Next.
- 7. From When Button Pressed, select **SUBMIT**.
- 8. Click Create Process.

Showing Additional Attributes in the Report Region

To alter the SQL Report region to join to the additional attributes table:

1. Under Regions, select Uploaded Files.

2. Replace the Region Source with the following:

```
SELECT w.id,w.name,s.subject
FROM HTMLDB_APPLICATION_FILES w,file_subjects s
WHERE w.name = s.name
```

3. Click Apply Changes.

Run the page. As shown in Figure 8–4, the Uploaded Files report now contains a Subject column.

Figure 8–4 Uploaded Files Report with Subject Column

Uploaded Files							
	Subject						
	ID	NAME	Subject				
	<u>download</u>	F1196951434/QA Sessions Info 2.doc	-				

Store the Document in a Custom Table

In certain cases, you may want to store uploaded documents in a table owned by your schema. For example, if you want to create an Oracle Text Index on uploaded documents, you need to store the documents in a custom table.

To store documents in your custom table:

- Add a column of type BLOB to hold the document
- Alter the process to insert documents into the custom table

To add a BLOB column to the file_subjects table:

- 1. Navigate to the Workspace home page.
- 2. Click SQL Workshop.
- 3. Click SQL Command Processor.
- 4. Enter the following SQL statement:

ALTER TABLE file_subjects ADD(id number,blob_content BLOB,mime_type varchar2(4000));

5. Click Run SQL.

To alter the process to insert documents into the file_subjects table:

- **1.** Navigate to the Page Definition of page 2.
- 2. Under Page Processing, select Insert.
- **3.** Under source, replace the process with the following:

```
IF ( :P2_FILE_NAME is not null ) THEN
INSERT INTO file_subjects(id,NAME, SUBJECT, BLOB_CONTENT, MIME_TYPE)
SELECT ID,:P2_FILE_NAME,:P2_SUBJECT,blob_content,mime_type
FROM HTMLDB_APPLICATION_FILES WHERE name = :P2_FILE_NAME;
DELETE from HTMLDB_APPLICATION_FILES WHERE name = :P2_FILE_NAME;
END IF;
```

4. Click Apply Changes.

Downloading Documents from the Custom Table

Now that documents are being stored in a custom table, you need to provide a way to download them. You do this by creating a procedure and granting execute on that procedure to the pseudo user HTMLDB_PUBLIC_USER.

To accomplish this you need to change:

- The SQL report region to no longer join to the HTMLDB_APPLICATION_FILES view
- The URL supplied for the ID column in the SQL report to execute the new procedure instead of executing the p procedure

To create a procedure to download documents from the file_subjects table and grant execute to public:

- 1. Navigate to the SQL Workshop.
- 2. Click SQL Command Processor.
- 3. In the SQL Statement field, enter:

```
CREATE OR REPLACE PROCEDURE download_my_file(p_file in number) AS
       v_mime VARCHAR2(48);
        v_length NUMBER;
        v_file_name VARCHAR2(2000);
       Lob loc BLOB;
BEGIN
        SELECT MIME_TYPE, BLOB_CONTENT, name, DBMS_LOB.GETLENGTH(blob_content)
               INTO v_mime, lob_loc, v_file_name, v_length
               FROM file_subjects
               WHERE id = p_file;
              -- set up HTTP header
              _ _
                    -- use an NVL around the mime type and
                    -- if it is a null set it to application/octect
                    -- application/octect may launch a download window from
windows
                    owa_util.mime_header( nvl(v_mime, 'application/octet'),
FALSE );
                -- set the size so the browser knows how much to download
               htp.p('Content-length: ' || v_length);
               -- the filename will be used by the browser if the users does a
save as
               htp.p('Content-Disposition: attachment; filename="'||substr(v_
file_name,instr(v_file_name,'/')+1)|| '"');
               -- close the headers
               owa_util.http_header_close;
                -- download the BLOB
               wpg_docload.download_file( Lob_loc );
end download_my_file;
/
```

- 4. Click Run SQL.
- 5. In the SQL Statement field, enter:

```
GRANT EXECUTE ON download_my_file TO PUBLIC /
```

6. Click Run SQL.

To change the SQL report region to no longer join with the HTMLDB_APPLICATION_ FILES view:

- **1.** Navigate to the Page Definition of page 2.
- 2. Under Regions, select Uploaded Files.
- **3.** Replace the Region Source with the following:

SELECT s.id, s.name, s.subject FROM file_subjects s

4. Click Apply Changes.

To change the download link to use the new download procedure:

- **1.** Navigate to the Page Definition of page 2.
- 2. Under Regions, click **Q** next to Uploaded Files.
- 3. Next to the ID column, click the Edit icon.
- 4. Scroll down to the Column Link region.
- 5. Replace existing URL with the following #OWNER#.download_my_file?p_file=#ID#
- 6. Click Apply Changes.

9

How to Incorporate JavaScript into an Application

JavaScript is commonly used in Web applications as logic executed in the Web browser to provide functionality such data validations or dynamic user interface behaviors. Oracle HTML DB provides several ways to include JavaScript libraries and endless ways to incorporate the calling of JavaScript functions into the user interface.

This tutorial describes some usage scenarios for JavaScript and includes details about how to implement them in your application.

This section contains the following topics:

- Understanding How to Incorporate JavaScript Functions
- About Referencing Items Using JavaScript
- Calling JavaScript from a Button
- Creating a Client Side JavaScript Validation
- Enabling and Disabling Form Elements
- Changing the Value of Form Elements

Understanding How to Incorporate JavaScript Functions

There are two primary places to include JavaScript functions:

- In the HTML Header attribute of the page
- In a .js file in the page template.

Incorporating JavaScript in the HTML Header Attribute

One way to include JavaScript into your application is add it to the HTML Header attribute of the page. This is good approach for functions that are very specific to a page as well as a convenient way to test a function before you include it in the .js file.

You can add JavaScript functions to a page by simply entering the code into the HTML Header attribute of the Page Attributes page. For example, adding following would test function accessible from anywhere on the current page.

```
<script language="JavaScript1.1" type="text/javascript>
  function test(){
    alert('This is a test.');
  }
</script>
```

Including JavaScript in a .js File Referenced by the Page Template

In Oracle HTML DB you can reference a .js file in the page template. This approach makes all the JavaScript in that file accessible to the application. This is the most efficient approach since a .js file loads on the first page view of your application and is then cached by the browser.

The following demonstrates how to include a .js file in the header section of a page template.

About Referencing Items Using JavaScript

When you reference an item, the best approach is to reference by ID. If you view the HTML source of an Oracle HTML DB page in a Web browser, you would notice that all items have an ID attribute. This ID corresponds to name of the item, not the item label. For example, if you create an item with the name P1_FIRST_NAME and a label of First Name, the ID will be P1_FIRST_NAME.

Knowing the item ID enables you to use the JavaScript function getElementById to get and set item attributes and values. The following example demonstrates how to reference an item by ID and display its value in an alert box.

```
<script language="JavaScript1.1" type="text/javascript">
function firstName(){
    alert('First Name is ' + document.getElementById('P1_FIRST_NAME').value );
  }
  // or a more generic version would be
  function displayValue(id){
    alert('The Value is ' + document.getElementById(id).value );
  }
  </script>
  // Then add the following to the "Form Element Attributes" Attribute of the
  item:
    onChange="javascript:displayValue('P1_FIRST_NAME');"
```

Calling JavaScript from a Button

Calling a JavaScript from a button is a great way to confirm a request. Oracle HTML DB actually uses this technique for the delete operation of most objects. For example, when you delete a button, a JavaScript Alert Box appears asking you to confirm your request. Consider the following example:

```
<script language="JavaScript1.1" type="text/javascript">
   function deleteConfirm(msg)
   {
   var confDel = msg;
   if(confDel ==null)
      confDel= confirm("Would you like to perform this delete action?");
```

```
else
  confDel= confirm(msg);
if (confDel== true)
  doSubmit('Delete');
  }
</script>
```

This example creates a function to confirm a delete action and then calls that function from a button. Note that the function optionally submits the page and sets the value of the internal variable :REQUEST to "Delete," thus performing the delete using a process that conditionally executes based on the value of request.

Note that when you create the button you would need to select the Action **Redirect to URL without submitting page**. Then, you would specify a URL target such as the following:

javascript:confirmDelete('Would you like to perform this delete action?');

Creating a Client Side JavaScript Validation

Client side validations give immediate feedback to users using a form. One very common JavaScript validation is field not null. For example, you can create a function in the HTML Header attribute of a page and then call that function from an item.

Creating this type of JavaScript validation involves the following steps:

- Create a new application on the EMP table.
- Create an item on page 1 called P1_ENAME that has a label of Employee Name.
- Add a function to the HTML Header attribute on page 3
- Edit the P3_ENAME item on page 3 to call the function

Topics in this section include:

- Create an Application on the EMP Table
- Add a Function to the HTML Header Attribute
- Edit an Item to Call the Function

Create an Application on the EMP Table

To create a new application on the EMP table:

- **1.** Navigate to the Workspace home page.
- 2. Click Create Application.
- 3. On Select Creation Method, select **Based on Existing Table** and click **Next**.
- 4. On Identify Table/View Owner, select the owner of the EMP table and click Next.
- 5. On Identify Table / View Name, select EMP and click Next.
- 6. On Table User Interface Defaults, accept the defaults and click Next.
- **7.** For Summarize by Column, select the columns **JOB**, **MGR**, and **DEPTNO** and click **Next**.
- 8. On Aggregate by Column, select SAL and COMM and click Next.
- **9.** Accepts the remaining defaults and click **Next**.

- 10. Click Create.
- **11.** To view the application, click **Run Application**.
- **12.** When prompted for a user name and password:
 - For User Name, enter the name of your workspace
 - For Password, enter the password for your workspace

The application contains the following pages:

- a standard report
- an insert form
- an update form
- a success form (indicates when a record is successfully inserted)
- an analysis menu page
- analysis reports
- analysis charts
- a login page

13. Select Edit Application from the Developer Toolbar.

Add a Function to the HTML Header Attribute

To add function to the HTML Header attribute on page 2:

- 1. Navigate to the Page Definition for page 2, Insert Form.
- 2. On the Page Definition, click Edit Attributes.

The Page Attributes appear.

3. In HTML Header, enter the following:

```
<script language="JavaScript1.1" type="text/javascript">
  function notNull(object){
    if(object.value=="")
    alert('This field must contain a value.');
  }
</script>
```

4. Click Apply Changes.

Edit an Item to Call the Function

The next step is to edit the P2_ENAME item and add code to the HTML Form Element Attributes attribute to call the function.

To edit the P2_ENAME item to call the function:

- 1. Navigate to the Page Definition for page 2, Insert Form.
- 2. Under Items, select P2_ENAME.
- **3.** Scroll down to Element.
- 4. In HTML Form Element Attributes, enter the following: onBlur="javascript:notNull(this);"
- 5. Click Apply Changes.

6. Run the page. If you position the cursor in the Ename field and click **Create**, the following message appears:

This field must contain a value.

Enabling and Disabling Form Elements

While Oracle HTML DB enables you to conditionally display a page item, it is important to note that a page must be submitted for any changes on the page to be evaluated. The following example demonstrates how to use JavaScript to disable a form element based on the value of another form element.

First, you write a function and place it in the HTML Header attribute of the page containing your update form. Second, you call the function from an item on the page. The following example demonstrates how to add a JavaScript function to prevent users from adding commissions to employees who are not in the Sales Department (deptno = 30).

Topics in this section include:

- Add a Function the HTML Header Attribute
- Edit an Item to Call the Function
- Change P3_DEPTNO to a Select List
- Create a Call to disFormItems from the Region Footer

Add a Function the HTML Header Attribute

To add a function to the HTML Header attribute on page 3:

- 1. Navigate to the Page Definition for page 3, Update Form.
- **2.** On the Page Definition, click **Edit Attributes**.

The Page Attributes appear.

3. In HTML Header, enter the following:

<script language="JavaScript1.1" type="text/javascript">

```
// This function takes in:
   // 1. A string expression to evaluate. For example:
   11
         'document.getElementById(\'P2_DEPTNO\').value==\'0\'
   11
         Notice the quotes are escaped using a "\"
   // 2. One or more arguments which are item ID's as strings. For example:
   //
          ..., 'P2_ENAME', 'P2_SAL'...);
   11
          Notice the ID's are the item names, NOT item labels
function
disFormItems(testString,item1,item2,item3,item4,item5,item6,item7,item8,item9,i
tem10){
   if(theTest){
      for(var i=1;i<12;i++){</pre>
          if (arguments[i]) {
             disItem = document.getElementById(arguments[i]);
              disItem.style.background = '#cccccc';
              disItem.disabled = true;
           }
```

```
}
else{
    for(var i=1;i<12;i++){
        if (arguments[i]){
            disItem = document.getElementById(arguments[i]);
            disItem.disabled = false;
            disItem.style.background = '#ffffff';
            }
        }
    }
}
</script>
```

4. Click Apply Changes.

Edit an Item to Call the Function

The next step is to edit the P3_DEPTNO item and add code to the HTML Form Element Attributes attribute to call the function.

To edit the P3_DEPTNO item to call the function:

- 1. Navigate to the Page Definition for page 3.
- 2. Under Items, select P3_DEPTNO.
- **3.** Scroll down to Element.
- 4. In HTML Form Element Attributes, enter the following:

onChange="javascript:disFormItems('document.getElementById(\'P3_ DEPTNO\').value!=\'30\'','P3_COMM');"

5. Click Apply Changes.

Change P3_DEPTNO to a Select List

To change the P3_DEPTNO to display as a select list:

- 1. Navigate to the Page Definition for page 3.
- 2. Under Items, select P3_DEPTNO.
- 3. Under Display As, select Select List.
- 4. Under List of Values:
 - a. From Display Null, select No.
 - **b.** In List of Values definition, enter:

SELECT dname_id, deptno FROM dept

5. Click Apply Changes.

Create a Call to disFormItems from the Region Footer

Finally, you need to create a call to the disFormItems function after the page is rendered to disable P3_COMM if the selected employee is not a SALES representative. A good place to make this call would be from the Region Footer of the region which contains the items.

To disable P3_COMM when the page is first loaded:

- 1. Navigate to the Page Definition for page 3.
- 2. Under Regions, select EMP.
- 3. Scroll down to Header and Footer Text.
- 4. In Region Footer Header, enter the following:

```
<script language="JavaScript1.1" type="text/javascript">
    // This code calls the function when the page loads, thus setting the items
state correctly.
    disFormItems('document.getElementById(\'P3_DEPTNO\').value!=\'30\'','P3_
COMM');
</script>
```

- 5. Click Apply Changes.
- **6.** Run the page.

Figure Figure 9–1 demonstrates the completed form.

Figure 9–1 Completed Form

| <u>Home</u> > Update Emp | |
|--------------------------|-----------------------------|
| Emp | Cancel Delete Apply Changes |
| Ename | |
| Job | |
| Mgr | |
| Hiredate | |
| Sal | |
| Comm |] |
| Deptno 1 💌 | |
| | |

Changing the Value of Form Elements

In the following example, there are four text boxes in a region. The fourth text box contains the sum of the other three. To calculate this sum you will add a JavaScript function to the HTML Header attribute and then call that function from the first three items

To call the function from the first three items:

- **1.** Navigate to the appropriate Page Definition.
- 2. On the Page Definition, click Edit Attributes.

The Page Attributes appear.

3. In HTML Header, enter the following:

```
<script language="JavaScript1.1" type="text/javascript">
function sumItems(){
function getVal(item){
if(document.getElementById(item).value != "")
return parseFloat(document.getElementById(item).value);
else
return 0;
}
```

```
document.getElementById('P1_TOTAL').value =
getVal('P1_ONE') + getVal('P1_TWO') + getVal('P1_THREE');
}
</script>
```

4. Click Apply Changes.

To call the function from all three items:

- **1.** Navigate to the appropriate Page Definition.
- **2.** For each item:
 - **a.** Select the item name.
 - **b.** Scroll down to Element.
 - **c.** In HTML Form Element Attributes, enter:

onChange="javascript:sumItems();"

d. Click Apply Changes.

How to Build and Deploy an Issue Tracking Application

Storing information in an Oracle database organizes it into tables that group similar information together and removes redundancies. Using the Oracle HTML DB development environment, you can quickly build an application that enables a user to view and update information stored in an Oracle Database.

This tutorial describes how to use Oracle HTML DB to create and deploy an application that tracks the assignment, status, and progress of issues related to a project.

Topics in this section include:

- Business Scenario
- Designing the Database Objects
- Implementing Database Objects
- Loading Demonstration Data
- Building a Basic User Interface
- Adding Advanced Features
- Deploying Your Application

Business Scenario

Effective project management is the key to completing any project on time and within budget. Within every project there are always multiple issues that need to be tracked, prioritized, and dealt with.

The MRVL Company has several projects that must be completed on time for the company to be profitable. Missing deadlines for any of the projects will cause the company to lose money. The project leads are tracking issues in several different ways. Some individuals are manually tracking issues in notebooks, others are tracking issues in text documents, and other managers are using spreadsheets.

By creating a hosted application in Oracle HTML DB, each project lead can easily record and track issues in one central location. Not only will everyone have access to just the data they need, but having the data stored in one location, will make it easier for management to determine if any critical issues are not being addressed.

Planning and Project Analysis

Before any beginning development on an application, you first need to define requirements that describe what the application does. Once defined, you can turn these requirements into a database design and an outline that describes how the user interface accepts and presents data.

For this business scenario, the project leads establish requirements that define what information needs to be tracked, how security will work, what data management functions will be included, and how data will be presented to users.

Topics in this section include:

- Necessary Data
- Requested Security
- Data Management Functions
- Data Presentation Functions
- Special Functions

Necessary Data

Currently, each project lead tracks information slightly differently. Together, everyone agrees that the application should include the following information:

- Summary of the issue
- Detailed description of the issue
- Who identified the issue
- The date the issue was identified
- Which project the issue is related to
- Who the issue is assigned to
- A current status of the issue
- Priority of the issue
- Target resolution date
- Actual resolution date
- Progress report
- Resolution summary

Requested Security

Because the project leads were concerned about everyone having access to all the information, they agree upon the following access rules:

- Each team member and project lead is only assigned to one project at a time
- Each team member and project lead must be assigned to a project
- Managers are never assigned to a specific project
- Only managers can define and maintain projects and people
- Everyone can enter new issues
- Once assigned, only the person assigned or a project lead can change data about the issue

Management needs views that summarize the data without access to specific issue details

Data Management Functions

Next, the project leads determine how information will be entered into the system. In this case, users must be able to:

- Create issues
- Assign issues
- Edit issues
- Create projects
- Maintain projects
- Create people
- Maintain people information
- Maintain project assignments

Data Presentation Functions

Once the data is entered into the application, users will need to view the data. The team decides they initially need to be able to view the following:

- All issues by project
- Open issues by project
- Overdue issues, by project and for all
- Recently opened issues
- Unassigned issues
- Summary of issues by project, for managers
- Resolved issues by month identified
- Issue resolution dates displayed on a calendar
- Days to Resolve Issues by person

Special Functions

Finally, the project leads determine the application must support the following special functions:

- Notify people when an issue is assigned to them
- Notify the project lead when any issue becomes overdue

Designing the Database Objects

Once you have defined the database object requirements, the next step is to turn these requirements in a database design and an outline that describes how the user interface accepts and presents data. In this step you need to think about how information should be organized in the tables in the underlying database. Given the requirements described "Planning and Project Analysis" on page 10-2, for this project you need to create three tables:

Projects tracks all current projects

- People contains information about who can be assigned to handle issues
- Issues tracks all the information about an issue, including the project to which it is related and the person assigned to rectify the issue

Be aware that you will also need create additional database objects, such as sequences and triggers, to support the tables. System generated primary keys will be used for all tables so that all the data can be edited without needing to implement a cascade update.

Topics in this section include:

- About the Projects Table
- About the People Table
- About the Issues Table

About the Projects Table

Each project must have a name and include a project start date as well as the projected end date. These dates will be used to help determine if any outstanding issues are jeopardizing the end date. Table 10–1 describes the columns to be included in the Projects table.

| Column Name | Туре | Size | Not Null? | Constraints | Description |
|-----------------|----------|------|-----------|-------------|--|
| project_id | integer | n/a | Yes | Primary key | A unique numeric
identification number for each
project. |
| | | | | | Populated by a sequence using a trigger. |
| project_name | varchar2 | 100 | Yes | Unique key | A unique alphanumeric name for the project. |
| start_date | date | n/a | Yes | None | The project start date. |
| target_end_date | date | n/a | Yes | None | The targeted project end date. |
| actual_end_date | date | n/a | No | None | The actual end date. |

Table 10–1 Project Table Details

About the People Table

Each person will have a defined name and role. Project leads and team members will also have an assigned project. To tie the current user to their role within the organization, e-mail addresses will be used for user names.

Table 10–2 on page 10-5 describes the columns that will be included in the People table.

| Column Name | Туре | Size | Not Null? | Constraints | Description |
|--------------|----------|------|-----------|---------------------|--|
| person_id | integer | n/a | Yes | Primary key | A numeric ID that identifies each user. |
| | | | | | Populated by a sequence using a trigger. |
| person_name | varchar2 | 100 | Yes | Unique key | A unique name that identifies each user. |
| person_email | varchar2 | 100 | Yes | None | User e-mail address. |
| person_role | varchar2 | 7 | Yes | Check
constraint | The role assigned to each user. |

Table 10–2People Table Details

Note: For the purposes of this exercise, this application has been simplified. People data is usually much more elaborate and is often pulled from a corporate Human Resource system. Also, people typically work on more than one project at a time. If the roles that are assigned to a person need to be dynamic, you would implement roles as a separate table with a foreign key back to the people table.

About the Issues Table

When the project leads defined their application requirements, they determined they needed to track specific issues assigned to a specific person. Issues will be included as a columns along with additional columns to provide an audit trail. The audit trail will track who created the issue, when it was created, as well as who last modified the issue and on what date that modification was made.

Table 10–3 describes the columns to be included in the Issues table.

| Column Name | Туре | Size | Not Null? | Constraints | Description |
|-------------------|----------|------|-----------|-------------------------|--|
| issue_id | integer | n/a | Yes | primary key | A unique numeric ID
that identifies an issue. |
| | | | | | Populated by a sequence using a trigger |
| issue_summary | varchar2 | 200 | Yes | None | A brief summary of the issue. |
| issue_description | varchar2 | 2000 | No | None | A detailed description of the issue. |
| identified_by | integer | n/a | Yes | foreign key to People | The user who identifies the issue. |
| identified_date | date | n/a | Yes | None | The date the issue was identified |
| related_project | integer | n/a | Yes | foreign key to Projects | Projects related to the issue. |
| assigned_to | integer | n/a | No | foreign key to People | The person who owns this issue. |

Table 10–3 Issue Table Details

| Column Name | Туре | Size | Not Null? | Constraints | Description |
|------------------------|----------|------|-----------|------------------|--|
| status | varchar2 | 8 | Yes | check constraint | The issue status.
Automatically set to
Open when new and set
to Closed when actual
resolution date entered |
| priority | varchar2 | 6 | No | check constraint | The priority of the issue. |
| target_resolution_date | date | n/a | No | None | The target resolution date. |
| progress | varchar2 | 2000 | No | None | The progress of the issue. |
| actual_resolution_date | date | n/a | No | None | Actual resolution date of the issue. |
| resolution_summary | varchar2 | 2000 | No | None | Resolution summary. |
| created_date | date | n/a | Yes | None | Populated by a trigger. |
| created_by | varchar2 | 60 | Yes | None | User who create this issue. |
| last_modified_date | date | n/a | No | None | Populated by a trigger. |

Table 10.2 (Cont.) Issue Table Details

Note: A real-world application might need more extensive auditing. For example, you might need to track each change to the data rather than just the last change. Tracking each change to the data would require an additional table, linked to the issues table. If the valid priorities assigned to issues needed to be dynamic, you would need to add a separate table with a foreign key back to the issues table.

Implementing Database Objects

This first step in building an application is to create the database objects in the underlying database. You create database objects within a user account in the Oracle database. To create this application, you need to request a new workspace within the Oracle HTML DB development environment. An administrator creates (or provisions) a workspace within an initial schema that will house the application objects.

Topics in this section include:

- Request a New Workspace
- Build the Database Objects

Request a New Workspace

Note: If you have a local installation of Oracle HTML DB, you may skip this section and use and existing workspace.

To request a workspace:

1. In a Web browser, navigate to the Oracle HTML DB Login page. To log in to the Oracle supported site of Oracle HTML DB development, go to:

http://htmldb.oracle.com/

The Login page appears.

2. Under Tasks, click Request a Workspace.

The Request Service Wizard appears.

3. Click **Continue** and follow the on-screen instructions.

You will be notified through e-mail when your request has been approved and your workspace has been provisioned.

Build the Database Objects

There are several ways to create objects in Oracle HTML DB. You can:

- Run the Create Object Wizard. This wizard walks you through the choices necessary to create the selected database object. To access the Create Object Wizard, click Create Object on the SQL Workshop home page.
- Execute commands in SQL Command Processor. Run SQL commands by typing or pasting them into the SQL Command Processor. To access SQL Command Processor, click SQL Command Processor on the SQL Workshop home page.
- Upload a script. Upload and script that contains all the necessary create object statements to the Script Repository. To access the Script Repository, click Upload on the Script Repository page.
- Create script online. Create a script online in the Script Repository. This is the method you will use to create the database objects for this exercise.

To build database objects by creating a script:

- **1.** Log in to Oracle HTML DB.
- 2. Click SQL Workshop on the Workspace home page.
- **3.** Under SQL Scripts, select **Scripts**.
- 4. Click Create.
- 5. For Script Name, enter DDL for Issue Management Application and click Next.
- **6.** In Script, copy and paste the DDL (data definition language) in "Create Application Database Objects DDL" on page A-1.
- 7. Click Create Script.

To run the DDL for Issue Management Application script:

- 1. In the Scripts list, click **Run** in the Actions column adjacent to DDL for Issue Management Application script.
- **2.** From Parse As, select the schema owner that was created with your workspace or the existing schema owner you wish to use for this exercise.
- 3. Click Run Script.

The Summary Statistics page appears. No error should display for all commands.

Viewing Created Database Objects

You can view database objects using the SQL Workshop Browse feature.

To view database objects in SQL Workshop:

- 1. Click the SQL Workshop tab.
- 2. Under Database Browser, click Tables.
- **3.** To view the details of a specific object (HT_ISSUES, HT_PEOPLE, or HT_ PROJECTS) click the **View** icon (the magnifying glass) icon to the left of the object name.

Loading Demonstration Data

Once you have created all the necessary database objects, the next step is to load data into the tables. You can manually load data using the import functionality available in Data Workshop or SQL Workshop. In the following exercise, you will use SQL Workshop to load demonstration data.

Look at the DDL you copied from "Create Application Database Objects DDL" on page A-1. Notice that the sequences used for the primary keys start at 40 in order to leave room for the demonstration data. Because the before insert triggers are coded so that the sequence is only accessed if a primary key value is not provided, they will not needed to be disabled in order for you to load data.

Topics in this section include:

- Load Projects Data
- Load People Data
- Load Issues Data

Load Projects Data

To import data into the Projects table:

- 1. Select the SQL Workshop tab.
- 2. Under SQL Scripts, select Scripts.
- 3. Click Create.
- 4. For Script Name, enter Load Project Data and click Next.
- 5. In Script, copy and paste the following:

```
INSERT INTO ht_projects
      (project_id, project_name, start_date, target_end_date)
   values
     (1, 'Internal Infrastructure', sysdate-150, sysdate-30)
/
INSERT INTO ht_projects
     (project_id, project_name, start_date, target_end_date)
  values
      (2, 'New Payroll Rollout', sysdate-150, sysdate+15)
INSERT INTO ht_projects
      (project_id, project_name, start_date, target_end_date)
   values
      (3, 'Email Integration', sysdate-120, sysdate-60)
INSERT INTO ht_projects
     (project_id, project_name, start_date, target_end_date)
  values
     (4, 'Public Website Operational', sysdate-60, sysdate+30)
/
```

```
insert into ht_projects
    (project_id, project_name, start_date, target_end_date)
    values
        (5, 'Employee Satisfaction Survey', sysdate-30, sysdate+60)
/
```

- 6. Click Create Script.
- 7. In the Scripts list, click **Run** in the Actions column adjacent to the Load Project Data script.
- **8.** From Parse As, select the appropriate schema owner.
- 9. Click Run Script.

The Summary Statistics page appears. No error should display for all commands.

Although you have created the Projects, the dates need to be updated to make the projects current. To accomplish this, you run another script.

To update the project dates and make the projects current:

- 1. Return to the SQL Workshop home page.
- 2. Under SQL Scripts, select Scripts.
- 3. Click Create.
- 4. For Script Name, enter Update Project Dates and click Next.
- 5. In Script, copy and paste the following:

```
UPDATE ht_projects
  SET start_date = sysdate-150,
     target_end_date = sysdate-30
WHERE project_id = 1
/
UPDATE ht_projects
  SET start_date = sysdate-150,
     target_end_date = sysdate+15
WHERE project_id = 2
UPDATE ht_projects
  SET start_date = sysdate-120,
      target_end_date = sysdate-60
WHERE project_id = 3
/
UPDATE ht_projects
  SET start_date = sysdate-60,
     target_end_date = sysdate+30
WHERE project_id = 4
/
UPDATE ht_projects
  SET start_date = sysdate-30,
      target_end_date = sysdate+60
WHERE project_id = 5
/
```

- 6. Click Create Script.
- 7. In the Scripts list, click **Run** in the Actions column adjacent to the Update Project Dates script.
- 8. From Parse As, select the appropriate schema owner.

9. Click Run Script.

The Summary Statistics page appears. No error should display for all commands.

10. Click Cancel to return the Scripts Repository.

Load People Data

Once you have loaded data into the Project table, you can load People data. Because of foreign keys in the Projects table, People data must be loaded after Project data. You will load data into the People table by creating and running a script in SQL Workshop.

To load data into the People table:

- 1. Return to the SQL Workshop home page.
- 2. Under SQL Scripts, select Scripts.
- 3. In the Scripts Repository, click Create.
- 4. For Script Name, enter Load People Data and click Next.
- 5. In Script, copy and paste the following:

```
INSERT INTO ht_people
     (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (1, 'Joe Cerno', 'joe.cerno@mrvl-bademail.com', 'CEO', null)
INSERT INTO ht_people
     (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
    (2, 'Kim Roberts', 'kim.roberts@mrvl-bademail.com', 'Manager', null)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
    (3, 'Tom Suess', 'tom.suess@mrvl-bademail.com', 'Manager', null)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (4, 'Al Bines', 'al.bines@mrvl-bademail.com', 'Lead', 1)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (5, 'Carla Downing', 'carla.downing@mrvl-bademail.com', 'Lead', 2)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (6, 'Evan Fanner', 'evan.fanner@mrvl-bademail.com', 'Lead', 3)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
 values
    (7, 'George Hurst', 'george.hurst@mrvl-bademail.com', 'Lead', 4)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
VALUES
    (8, 'Irene Jones', 'irene.jones@mrvl-bademail.com', 'Lead', 5)
```

```
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (9, 'Karen London', 'karen.london@mrvl-bademail.com', 'Member', 1)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
  values
     (10, 'Mark Nile', 'mark.nile@mrvl-bademail.com', 'Member', 1)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
    (11, 'Jane Kerry', 'jane.kerry@mrvl-bademail.com', 'Member', 5)
INSERT INTO ht_people
     (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (12, 'Olive Pope', 'olive.pope@mrvl-bademail.com', 'Member', 2)
INSERT INTO ht_people
     (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
    (13, 'Russ Sanders', 'russ.sanders@mrvl-bademail.com', 'Member', 3)
INSERT INTO ht_people
    (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (14, 'Tucker Uberton', 'tucker.uberton@mrvl-bademail.com', 'Member', 3)
INSERT INTO ht_people
     (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (15, 'Vicky Williams', 'vicky.willaims@mrvl-bademail.com', 'Member', 4)
INSERT INTO ht_people
     (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
     (16, 'Scott Tiger', 'scott.tiger@mrvl-bademail.com', 'Member', 4)
INSERT INTO ht people
     (person_id, person_name, person_email, person_role, assigned_project)
 VALUES
      (17, 'Yvonne Zeiring', 'yvonee.zeiring@mrvl-bademail.com', 'Member', 4)
```

6. Click Create Script.

- 7. In the Scripts list, click **Run** in the Actions column adjacent to the Load People Data script.
- **8.** From Parse As, select the appropriate schema owner.
- 9. Click Run Script.

The Summary Statistics page appears. No error should display for all commands.

Load Issues Data

The last data you need to load is the Issues data. As with People data, you will create and run a script to populate the Issues table.

To load data into the Issues table:

- 1. Return to the SQL Workshop home page.
- 2. Under SQL Scripts, select Scripts.
- 3. In the Scripts Repository, click Create.
- 4. For Script Name, enter Load Issues Data and click Next.
- 5. In Script, copy and paste the script in "Create Issues Script" on page A-1.
- 6. Click Create Script.
- **7.** In the Scripts list, click **Run** in the Actions column adjacent to the Load People Data script.
- 8. From Parse As, select the appropriate schema owner.
- 9. Click Run Script.

The Summary Statistics page appears. No error should display for all commands.

Building a Basic User Interface

Once you have created the objects that support your application and have loaded the demonstration data, the next step is to create a user interface. In this exercise, you use the Create Application Wizard in Application Builder to create an application and then the pages that support the data management and data presentation functions described in "Planning and Project Analysis" on page 10-2.

Topics in this section include:

- Create the Application
- Add Pages to Maintain Projects
- Add Pages to Track People
- Add Pages to Track Issues
- Create Summary Reports
- Add Content to the Home Page
- Add a Breadcrumb Menu

Create the Application

You can use the Create Application Wizard to create an application that contains pages that enables users to view a report on and create data for selected tables within a schema. Alternatively, you can create an application first and then add pages to it. Since the application requirements include customized overview pages, for this exercise you will use latter approach.

To create the application manually:

- 1. From the Workspace home page, click **Create Application**.
- 2. On Select Creation Method, select From Scratch
- 3. For Name and Authentication:

- a. For Name, enter Issue Tracker.
- b. Set Pages to 1.
- c. Accept the remaining defaults and click Next.
- 4. For Tabs, select No Tabs and click Next.
- 5. For Page Name, enter Home and click Next.
- 6. For Theme, select **Theme 10** and click **Next**.
- 7. Review your selections and click Create Application.

To view the application:

- 1. Click the **Run** icon on the Applications home page.
- **2.** When prompted enter your workspace username and password.

This authentication is part of the default security of any newly created application. As shown in Figure 10–1, the home page appears.

Figure 10–1 Issue Tracking Application Home Page

| | TWINTERS | Print | <u>Logout</u> | |
|--|----------|-------------|---------------|------|
| | | | | |
| | | | | |
| | | | | |
| Edit Application Edit Page 1 New Session Debug Show Edit Links | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | - |
| | 😽 Lo | ical intran | ec | _//_ |

Although the page has no content, notice that the Create Application Wizard created the following items:

- Navigation Links Two navigation bar entries appear in the upper right of the page. Print enables the user to print the current page. Logout enables the user to log out of the application.
- Developer Links The Developer Toolbar appears at the bottom of the page. These links only display if you are logged in as a developer. Regular users, those who only have access to run the application, will not see these links. From left to right, the Developer Toolbar contains the following links:
 - Edit Application Edit the application by linking to the Application Builder home page.
 - Edit Page 1 Edit the current running page. This link takes you to Page Definition for the current page.

- **New** Add a new component to the current page.
- **Session** Open a new page containing session details for the current page.
- Debug Display the current page in debug mode.
- Show Edit Links Displays edit links next to each object on the page that can be edited. Each edit link resembles two colons (::) and appears to the right of navigation bar items, tabs, region titles, buttons, and items. Clicking a edit link displays another window in which to edit the object.
- **3.** Click **Edit Application** on the Developer Toolbar to return to Application Builder home page. Notice that the Create Application Wizard also created a Login page.

Once you have created the basic application structure, the next step is to create individual pages.

Add Pages to Maintain Projects

First, you need to create pages that enable users to view and add data to tables. To accomplish this, you will use the Form on a Table with Report, 2 Pages Wizard. This wizard creates a report page and maintenance page for each table the start with HT_ PROJECTS.

Topics in this section include:

- Create Pages for Maintaining Projects
- Refine the Appearance of the Projects Report Page
- Refine the Create/Edit Project Page

Create Pages for Maintaining Projects

To create pages for maintaining HT_PROJECTS table:

- 1. On the Application Builder home page, click **Create Page**.
- 2. Select Page with Component and click Next.
- 3. Select Form and click Next.
- 4. Select Form on a Table with Report, 2 Pages and click Next.
- 5. For Table/View Owner, select the appropriate schema and click Next.
- 6. For Table/View Name, select HT_PROJECTS and click Next.
- 7. On Identify Report Attributes:
 - a. For Page, enter 2.
 - **b.** For Page Name and Region Title, enter Projects.
 - c. Click Next.
- 8. For Tab Options, accept the default selection Do not use tabs and click Next.
- 9. For Select Column(s), select every column except PROJECT_ID and click Next.

Note that Project Name is unique and identifies the project. The ID was added to simplify the foreign key and enable cascading updates.

10. For **Edit Link Image**, select the third option (the word Edit in blue with a white background) and click **Next**.

The next attributes define the Form Page.

- 11. On Identify Page and Region Attributes for Form:
 - **a.** For Page, enter 3.
 - **b.** For Page Name and Region Title, enter Create/Edit Project.
 - c. Click Next.
- 12. For Tab Options, accept the default selection Do not use tabs and click Next.
- 13. For Primary Key, accept the default PROJECT_ID and click Next.
- 14. For Source Type, accept the default Existing Trigger and click Next.
- 15. For Select Column(s), selected all columns and click Next.
- **16.** Under Identify Process Options, accept the defaults for **Insert**, **Update** and **Delete**, and click **Next**.
- 17. Review your selections and click Finish.

To preview your page, select Run Page. As shown in Figure 10–2 on page 10-5, the newly created report displays the demo data.

Figure 10–2 Projects Page

| ſ | Projec | ts | | | Create |
|---|--------|------------------------------|------------|-----------------|-----------------|
| | Edit | Project Name | Start Date | Target End Date | Actual End Date |
| | (EDIT) | Internal Infrastructure | 27-AUG-04 | 25-DEC-04 | |
| | (EDIT) | New Payroll Rollout | 27-AUG-04 | 08-FEB-05 | |
| | EDIT | Email Integration | 26-SEP-04 | 25-NOV-04 | |
| | (EDIT) | Public Website Operational | 25-NOV-04 | 23-FEB-05 | |
| | (EDIT) | Employee Satisfaction Survey | 25-DEC-04 | 25-MAR-05 | |
| | | | -
- | | 1 - 5 |

Click the **Edit** icon to view an existing row or click the **Create** button to create a new record. If you click the **Edit** icon to the left of Employee Satisfaction Survey, a form resembling Figure 10–3 appears.

Figure 10–3 Create/Edit Project Form

| Create/Edit Project | |
|---|-----------------------------|
| | Cancel Delete Apply Changes |
| | _ |
| O Project Name Employee Satisfaction Survey | |
| O Start Date 12/25/2004 | |
| O Target End Date 03/25/2005 | |
| Actual End Date | |
| | |

Refine the Appearance of the Projects Report Page

You can change the appearance of the Projects report page by adding a format mask to the dates.

To add a format mask to the dates on the Create/Edit Project page:

1. Navigate to the Page Definition for page 2, Projects:

- **a.** From the Developer toolbar, select **Edit Application**.
- **b.** From the Pages list, select **Projects**.
- 2. Under the Regions section, select **Q** to the left of Projects.
- **3.** Edit the format for the START_DATE:
 - **a.** Click the **Edit** icon the left of START_DATE.

The Column Attributes page appears.

- **b.** For Number/Date Format, enter DD-MON-YYYY.
- **4.** Edit the format for the TARGET_END_DATE:
 - **a.** Click the Next button (>) at the top of the page to navigate to the next Report Item.

The Column Attributes page appears.

- **b.** For Number/Date Format, enter DD-MON-YYYY.
- **5.** Edit the format for the ACTUAL_END_DATE:
 - **a.** Click the Next button (>) at the top of the page to navigate to the next Report Item.

The Column Attributes page appears.

- **b.** For Number/Date Format, enter DD-MON-YYYY.
- 6. Click Apply Changes.

The Report Attributes page appears.

- **7.** For PROJECT_ID, delete the Heading **Edit**.
- **8.** For the START_DATE, TARGET_END_DATE and ACTUAL_END_DATE columns, select **center** for Column Alignment and Heading Alignment.
- 9. To enable column heading sorting, check **Sort** for all columns except PROJECT_ID.
- **10.** For PROJECT_NAME, select **1** for Sort Sequence.

This selection specifies PROJECT_NAME as the default column to sort on. Note this functionality can overridden by any user selections.

- **11.** Scroll down to Sorting. For Ascending and Descending Image, select the light gray arrow.
- 12. Under Messages, enter the following in When No Data Found Message:

No Projects found.

13. Click Apply Changes.

To view your changes, click the run icon in the upper right of the page. As shown in Figure 10–4, note the addition of a sort control on the Project Name column and the format of the dates in the Start Date and Target End Date columns.

| Projects Create | | | | | | |
|-----------------|------|------------------------------|-------------|-----------------|-----------------|--|
| | | Project Name | Start Date | Target End Date | Actual End Date | |
| | EDIT | Email Integration | 26-SEP-2004 | 25-NOV-2004 | | |
| | EDIT | Employee Satisfaction Survey | 25-DEC-2004 | 25-MAR-2005 | | |
| | EDIT | Internal Infrastructure | 27-AUG-2004 | 25-DEC-2004 | | |
| | EDIT | New Payroll Rollout | 27-AUG-2004 | 08-FEB-2005 | | |
| | EDIT | Public Website Operational | 25-NOV-2004 | 23-FEB-2005 | | |
| | | | | | | |

Figure 10–4 Projects Page with Sort Control

Refine the Create/Edit Project Page

Next, you will customize the Create/Edit Project page to make the Project Name field larger, the date fields smaller, change the date picker type and add a format mask for dates, and add validations that check if the target and actual end dates are after the start date.

To make the Project Name field larger and the date fields smaller:

- 1. Navigate to the Page Definition for Page 3, Create/Edit Project.
 - a. From the Developer toolbar, select Edit Application.
 - **b.** From the Pages list, select **Create/Edit Projects**.
- 2. Under Items, select the heading Items to edit selected attributes of all items.
- 3. Scroll to the right and locate the Width column:
 - **a.** For Project Name, enter 60.
 - **b.** For Start Date, enter 12.
 - **c.** For Target End Date, enter 12.
 - d. For Actual End Date, enter 12.
 - e. Click Apply Changes.
- **4.** Click the **Edit Page** icon in the upper right corner of the page to return to the Page Definition.

To change the date picker type and add a format mask for dates:

- **1.** Edit the item P3_START_DATE.
 - a. Under Items, select P3_START_DATE.
 - b. Under Identification, for Display As select Date Picker (DD-MON-YYYY).
 - c. Click Apply Changes.

Edit the item P3_TARGET_END_DATE.

- a. Under Items, select P3_TARGET_END_DATE.
- b. Under Identification, for Display As select Date Picker (DD-MON-YYYY).
- c. Click Apply Changes.

Edit the item P3_ACTUAL_END_DATE.

a. Under Items, select P3_ACTUAL_END_DATE.

- **b.** Under Identification, for Display As select **Date Picker (DD-MON-YYYY)**.
- c. Click Apply Changes.

To add validations to check if the target and actual end dates are after the start date:

- 1. Under the Validations section, click the **Create** icon.
- **2.** For Identify the validation level, accept the default **Item level validation** and click **Next**.
- 3. For Item, select P3_TARGET_END_DATE and click Next.
- 4. For Select a validation method, select PL/SQL and click Next.
- On Pick PL/SQL Validation Type, accept the default PL/SQL Expression and click Next.
- 6. For Validation Name, enter TARGET_AFTER_START and click Next.
- 7. On Identify Validation and Error Message:
 - a. For Validation, enter:

```
to_date(:P3_ACTUAL_END_DATE,'DD-MON-YYYY') >= to_date(:P3_START_
DATE,'DD-MON-YYYY')
```

b. For Error Message, enter:

Actual End Date must be same or after Start Date.

- c. Click Next.
- 8. On Identify Validation Conditions:
 - a. For Condition Type, select the shortcut link [item not null].

Selecting this shortcut link selects **Value of Item in Expression 1 is NOT NULL** from the Condition Type list.

b. For Expression 1, enter:

P3_ACTUAL_END_DATE.

This selection ensures that this validation will only execute if the user enters an Actual End Date.

c. Click Create.

To view your changes, click the **Run Page** icon in the upper right of the page. (See Figure 10–5.)

Figure 10–5 Modified Create/Edit Project

| Create/Edit Project | |
|--|-----------------------------|
| | Cancel Delete Apply Changes |
| • | |
| Project Name Employee Satisfaction Survey | |
| O Start Date 25-DEC-2004 | |
| O Target End Date 25-MAR-2005 | |
| Actual End Date | |
| L | |
Add Pages to Track People

Once the initial Projects pages are complete, you create pages for maintaining people. Topics in this section include:

- Create Pages for Maintaining People
- Modify of the People Report Page
- Refine the Create/Edit People Page

Create Pages for Maintaining People

To create pages for maintaining the HT_PEOPLE table:

- **1.** Return to the Application Builder home page.
- 2. Click Create Page.
- 3. Select Page with Component and click Next.
- 4. Select Form and click Next.
- 5. Select Form on a Table with Report, 2 Pages and click Next.
- 6. For Table/View Owner, select the appropriate schema and click Next.
- 7. For Table/View Name, select HT_PEOPLE and click Next.
- 8. On Identify Report Attributes:
 - **a.** For Page, enter 4.
 - **b.** For Page Name and Region Title, enter People.
 - c. Click Next.
- 9. For Tab Options, accept the default Do not use tabs and click Next.
- **10.** For **Select Column(s)**, select all columns except PERSON_ID and click Next.
- **11.** For **Edit Link Image**, select the third option (the word Edit in blue with a white background) and click **Next**.
- 12. On Identify Page and Region Attributes for Form:
 - **a.** For Page, enter 5.
 - **b.** For Page Name and Region Title, enter Create/Edit Person Information.
 - c. Click Next.
- 13. For Tab Options, accept the default Do not use tabs and click Next.
- 14. For Primary Key, accept the default **PERSON_ID** and click **Next**.
- 15. For Source Type, accept the default Existing Trigger and click Next.
- 16. For Select Column(s), select all the columns and click Next.
- 17. For Insert, Update and Delete, accept the defaults and click Next.
- 18. Review your selections and click Finish.

To preview your page, select Run Page. As shown in Figure 10–6 on page 10-20, notice the newly created report displays the demo data.

Figure 10–6 People Page

To preview the page for adding or editing people, click the **Edit** button in the far left column.

Modify of the People Report Page

Next, you will alter the People Report by changing the query to include a join to the Projects table and modify the headings.

To change the query to include a join to the Projects table:

- **1.** Navigate to the Page Definition for page 4, People.
- 2. Under the Regions section, select **People**.
- 3. Scroll down to Region Source.
- 4. In Region Source, enter:

```
SELECT a."PERSON_ID",
    a."PERSON_NAME",
    a."PERSON_EMAIL",
    a."PERSON_ROLE",
    b."PROJECT_NAME"
FROM "#OWNER#"."HT_PEOPLE" a,
    "#OWNER#"."HT_PROJECTS" b
WHERE a.assigned_project = b.project_id (+)
```

Note that the outer join is necessary because the project assignment is optional.

- **5.** Select the Report Attributes tab.
 - a. For PERSON_ID, remove the Heading Edit.
 - **b.** For PERSON_NAME, change Heading to Name.
 - c. For PERSON_EMAIL, change Heading to Email.
 - d. For PERSON_ROLE, change Heading to Role.

- e. For PROJECT_NAME, change Heading to Assigned Project and select left for Heading Align.
- **6.** Enable column heading sorting by selecting **Sort** for all columns except PERSON_ID.
- 7. For PERSON_NAME, select 1 for Sort Sequence.

This selection specifies PERSON_NAME as the default column to sort on. Note this functionality can overridden by any user selections.

- **8.** Scroll down to Sorting. For Ascending and Descending Image, select the light gray arrow.
- 9. Under Messages, enter the following in When No Data Found Message:

No people found.

10. Click **Apply Changes**.

To view your changes, click the **Run Page** icon in the upper right of the page. As shown in Figure 10–7, note the addition of a sort control on the Name column.

Refine the Create/Edit People Page

Next, you will customize the Create/Edit People page by adding lists of values to make it easier for users to select a Role or Assigned Project.

Add Lists of Values To add a list of values for Projects:

- 1. Navigate to the Page Definition for page 5, Create/Edit Person Information.
- **2.** Under Shared Components, locate the Lists of Values section and click the **Create** icon.
- 3. For Create List of Values, accept the default From Scratch and click Next.
- 4. On Create List of Values (LOV):

- a. For Name, enter PROJECTS.
- **b.** For Type:, select **Dynamic** and click **Next**.
- 5. In Query, enter:

```
SELECT project_name d, project_id v
FROM ht_projects
ORDER BY d
```

6. Click Create Named LOV.

To add a list of values for Roles:

- 1. Under Shared Components, locate the Lists of Values section and click the **Create** icon.
- 2. For Create List of Values, accept the default From Scratch and click Next.
- 3. On Create List of Values (LOV):
 - **a.** For Name, enter ROLES.
 - **b.** For Type:, select **Static** and click **Next**.
- 4. Enter the display value and return value pairs shown in Table 10–4:

Table 10–4 Display Value and Return Value pairs

| Display Value | Return Value |
|---------------|--------------|
| CEO | CEO |
| Manager | Manager |
| Lead | Lead |
| Member | Member |

- 5. Click Create Static LOV.
- **6.** Return to the Page Definition for Page 5. Click the **Edit Page** icon in the upper right corner.

Edit Display Attributes To edit display attributes for P5_PERSON_ROLE:

- 1. Under Items, select P5_PERSON_ROLE.
- 2. Under Identification, select Radiogroup from the Display As list.
- 3. Under Label, in Label enter Role.
- 4. Under Element, enter the following in Form Element Option Attribute:

```
class="instructiontext"
```

This specifies that the text associated with each radio group option is the same size as other items on the page.

- 5. Under List of Values, select **ROLES** from the Named LOV list.
- 6. Click Apply Changes.

To edit display attributes for P5_ASSIGNED_PROJECT:

- 1. Under Items, select P5_ASSIGNED_PROJECT.
- 2. Under Identification, select Select List from the Display As list.

- **3.** Under List of Values:
 - **a.** From the Named LOV list, select **PROJECTS**.

Next, specify that the underlying column is not mandatory.

b. For Null display value, enter:

- None -

4. Click Apply Changes.

To alter the display of fields and field labels:

- **1.** Click the heading **Items**.
- **2.** For P5_PERSON_NAME:
 - **a.** For Prompt, enter Name.
 - **b.** For Width, enter 60.
- **3.** For P5_PERSON_EMAIL:
 - a. For Prompt, enter Email Address.
 - **b.** For Width, enter 60.
- 4. Click Apply Changes.
- **5.** Click the **Edit Page** icon in the upper right corner to return to the Page Definition for Page 5.

Create a Validation The wizard created not null validations for Name, Email and Role. You must manually create another validation to ensure that Leads and Members have an assigned project while the CEO and Managers do not. AS a best practice, it is generally best to use built-in validation types since they are faster. However, for this compound type of validation, you will write a PL/SQL validation.

To add validations to ensure the correct people are assigned projects:

- 1. Under the Validations section, click the **Create** icon.
- On Identify Validation Type, accept the default Item level validation and click Next.
- 3. For Item, select P5_ASSIGNED_PROJECT and click Next.
- 4. For Select a validation method, select PL/SQL and click Next.
- **5.** For Pick the type of PL/SQL validation you wish to create, accept the default **PL/SQL Expression** and click **Next**.
- **6.** For Validation Name, enter PROJECT_MAND_FOR_LEADER_AND_MEMBER and click **Next**.
- 7. On Identify Validation and Error Message:
 - a. For Validation, enter:

(:P5_PERSON_ROLE IN ('CEO', 'Manager') AND :P5_ASSIGNED_PROJECT = '%' || 'null%') OR (:P5_PERSON_ROLE IN ('Lead', 'Member') AND :P5_ASSIGNED_PROJECT != '%' || 'null%')

Oracle HTML DB passes nulls as %null%. It also replaces %null% with a null when it processes data so to keep it in the validation, you need to break the string apart so that it is not recognized and replaced.

b. For Error Message, enter:

Leads and Members must have an Assigned Project, CEO and Managers cannot have an Assigned Project.

- c. Click Next.
- 8. Click Create.

To view your changes, click the **Run Page** icon in the upper right of the page. (See Figure 10–8.)

Figure 10–8 Revised Create/Edit Person Information Form

| Create/Edit Person Information | Cancel Create |
|--|---------------|
| Name Email Address | _ |
| C CEO
C Manager
C Lead
C Member | |
| Assigned Project Email Integration | |

Try entering some records to test the validation. Try to enter a CEO with a project and then try to enter a Lead without a project. Both cases will fail and display the error message you defined.

Add Pages to Track Issues

Lastly, you need to create pages for HT_ISSUES. This application needs multiple views on Issues. You can create these views as one, more complex report or as separate reports. For this exercise you will be creating the complex report. This report will have an Issues maintenance form. You will then link this maintenance form in multiple places. Ultimately, the Issues report will display Issues by the person who identified the issue, project, assigned person, status, or priority.

Topics in this section include:

- Create a Report for HT_ISSUES
- Refine the Create/Edit Issues Page
- Refine the Issues Report
- Add a Page to Support Assigning Multiple Issues Simultaneously

Create a Report for HT_ISSUES

To create a report for maintaining HT_ISSUES:

- 1. On the Application Builder home page, click Create Page.
- 2. Select Page with Component and click Next.
- 3. Select Form and click Next.
- 4. Select Form on a Table with Report, 2 Pages and click Next.
- 5. For Table/View Owner, select the appropriate schema and click Next.

- 6. For Table/View Name, select HT_ISSUES and click Next.
- 7. On Identify Report Attribute:
 - a. For Page, enter 6.
 - b. For Page Name and Region Title, enter Issues and click Next.
- 8. For Tab Options, accept the default Do not use tabs and click Next.
- 9. For Select Column(s), select the following and click Next:
 - **a.** ISSUE_SUMMARY
 - **b.** IDENTIFIED_BY
 - c. RELATED_PROJECT
 - d. ASSIGNED_TO
 - e. STATUS
 - f. PRIORITY
 - g. TARGET_RESOLUTION_DATE
 - h. ACTUAL_RESOLUTION_DATE
- **10.** For **Edit Link Image**, select the third option (the word Edit in blue with a white background) and click **Next**.
- 11. On Identify Page and Region Attributes for Form:
 - a. For Page, enter 7.
 - **b.** For Page Name and Region Title, enter Create/Edit Issues.
 - c. Click Next.
- 12. For Tab Options, accept the default Do not use tabs and click Next.
- 13. For Primary Key, accept the default ISSUE_ID and click Next.
- 14. For Source Type, accept the default Existing Trigger and click Next.
- **15.** For Select Column(s), select all the columns and click **Next**.
- 16. For Insert, Update and Delete, accept the default value Yes and click Next.
- **17.** Review your selections and click **Finish**.

Refine the Create/Edit Issues Page

When you refine the Create/Edit Page you will:

- Add lists of values to make it easier for users to select foreign key columns
- Organize and clean up items
- Change the display of audit columns
- Add a button to make data entry faster

Add Lists of Values Next, you need to add lists of values for Status, Priorities, and People.

To add a list of values for Status:

- **1.** Navigate to the Page Definition for page 7:
- 2. Under the Lists of Values section and click the **Create** icon.

- 3. For Create List of Values, accept the default From Scratch and click Next.
- 4. On Create List of Values (LOV):
 - a. For Name, enter STATUS.
 - **b.** For Type, select **Static**.
 - c. Click Next.
- 5. Enter the Display Value and Return Value pairs shown in Table 10–5:

Table 10–5 Display Value and Return Value Pairs

| Display Value | Return Value | |
|---------------|--------------|--|
| Open | Open | |
| On-Hold | On-Hold | |
| Closed | Closed | |

6. Click Create Static LOV.

To add a list of values for Priorities:

- 1. Return to the Page Definition for Page 7. Click the Edit Page icon in the upper right corner.
- 2. Under the Lists of Values section and click the Create icon.
- 3. For Create List of Values, accept the default From Scratch and click Next.
- 4. On Create List of Values (LOV):
 - **a.** For Name, enter PRIORITIES.
 - **b.** For Type, select **Static** and click **Next**.
- 5. Enter the Display Value and Return Value pairs shown in Table 10–6.

Table 10–6 Display Value and Return Value Pairs

| Display Value | Return Value |
|---------------|--------------|
| High | High |
| Medium | Medium |
| Low | Low |

6. Click Create Static LOV.

To add a list of values for People:

- 1. Return to the Page Definition for Page 7. Click the Edit Page icon in the upper right corner.
- 2. Under the Lists of Values section and click the Create icon.
- 3. For Create List of Values, accept the default From Scratch and click Next.
- 4. On Create List of Values (LOV):
 - **a.** For Name, enter PEOPLE.
 - b. For Type, select **Dynamic** and click **Next**.
- **5.** In Query enter:

```
SELECT person_name d, person_id v
FROM ht_people
ORDER BY 1
```

6. Click Created Named LOV.

Edit Specific Items Next, you edit individual items.

To edit P7_IDENTIFIED_BY:

- Return to the Page Definition for Page 7. Click the Edit Page icon in the upper right corner.
- 2. Under Items, select P7_IDENTIFIED_BY.
- 3. Under Identification, select Select List from the Display As list.
- 4. Scroll down to List of Values:
 - a. For Named LOV, select PEOPLE.
 - **b.** For Display Null, select **Yes**. The base column is mandatory but you do not want the first name in the list becoming the default value.
 - **c.** For Null display value, enter:

- Select Person -

5. Click the Next button (>) at the top of the page to navigate to the next item.

To edit P7_IDENTIFIED_DATE:

- **1.** Navigate to P7_IDENTIFIED_DATE.
- 2. Under Identification, for select **Date Picker (DD-MON-YYYY)** from the Display As list.
- 3. Scroll down to Default Value:
 - a. For Default Value, enter:

to_char(sysdate, 'DD-MON-YYYY')

- **b.** For Default Value Type, select **PL/SQL Expression**.
- 4. Click the Next button (>) at the top of the page to navigate to the next item.

To edit P7_RELATED_PROJECT:

- 1. Navigate to P7_RELATED_PROJECT.
- 2. Under Identification, for select Select List from the Display As list.
- 3. Scroll down to List of Values:
 - a. For Named LOV, select PEOPLE.
 - b. For Display Null, select Yes.
 - c. For Null display value, enter:

- Select Person -

4. Click the Next button (>) at the top of the page to navigate to P7_STATUS.

To edit P7_STATUS:

- **1.** Navigate to P7_STATUS.
- 2. Under Identification, for select **Radiogroup** from the Display As list.

- In Label, enter: Status:
- 4. Scroll down to Element. Enter the following in the Form Element Option Attribute: class="instructiontext"
- 5. Under Default Value, enter Open in Default value.
- 6. Scroll down to List of Values:
 - a. For Named LOV, select STATUS.
 - **b.** For Columns, enter 3.

This selection enables the three valid values to display side by side.

7. Click the Next button (>) at the top of the page to navigate to the next item.

- To edit P7_PRIORITY:
- **1.** Navigate to P7_PRIORITY.
- 2. Under Identification, for select Radiogroup from the Display As list.
- **3.** In Label, enter:
 - Priority:
- Scroll down to Element. Enter the following in the Form Element Option attribute: class="instructiontext"
- 5. Under Default Value, enter Open in Default value.
- 6. Scroll down to List of Values:
 - a. For Named LOV, select PRIORITIES.
 - **b.** For Display Null, select **Yes**.
 - **c.** For Columns, enter 4.

This selection reflects that fact there are three valid values plus the null value.

- d. For Null display value, enter None.
- 7. Click the Next button (>) at the top of the page to navigate to the next item.

To edit P7_TARGET_RESOLUTION_DATE:

- 1. Navigate to P7_TARGET_RESOLUTION_DATE.
- 2. Under Identification, for select **Date Picker (DD-MON-YYYY)** from the Display As list.
- 3. Click Apply Changes.

To edit P7_ACTUAL_RESOLUTION_DATE:

- **1.** Navigate to P7_ACTUAL_RESOLUTION_DATE.
- **2.** Under Identification, for select **Date Picker (DD-MON-YYYY)** from the Display As list.
- 3. Click Apply Changes.

Create Regions to Group Items Currently all items are grouped into one large region. Displaying items in logical groups will make data entry easier for users. Next, you will

create four new regions named Buttons, Identification, Progress, Resolution, and Auditing.

To create new regions to group items:

- 1. Under Regions, click the **Create** icon.
- 2. From the Tasks list, select Create Multiple HTML regions.
- **3.** For the first row:
 - For Sequence, enter 5.
 - For Title, enter Buttons.
 - For Template, select Button Region without Title.
- 4. For the second row, in Title enter Progress.
- 5. For the third row, in Title enter Resolution.
- 6. For the fourth row, in Title enter Audit Information.
- 7. Click Create Region(s).

Now that the new regions exist, rename the first region, Create/Edit Issues:

- 1. Under Regions, select Create/Edit Issue.
- 2. In Title, enter:.

Issue Identification

3. Click Apply Changes.

Move Items to the Appropriate Regions Next, move each item to the appropriate region. Note that you will also need to modify some item widths.

To move items to the appropriate regions:

- 1. Under Items, select the Items heading.
- 2. Under Region, select Progress for the following items:
 - P7_ASSIGNED_TO
 - P7_STATUS
 - P7_PRIORITY
 - P7_TARGET_RESOLUTION_DATE
 - P7_PROGRESS
- 3. Under Region, select **Resolution** for the following items:
 - P7_ACTUAL_RESOLUTION_DATE
 - P7_RESOLUTION_SUMMARY
- 4. Under Region, select Audit Information for the following items:
 - P7_CREATED_DATE
 - P7_CREATED_BY
 - P7_LAST_MODIFIED_DATE
 - P7_LAST_MODIFIED_BY
- **5.** For P7_ISSUE_SUMMARY, enter 60 for Width.

- **6.** For P7_IDENTIFIED_DATE, enter 12 for Width.
- 7. For P7_TARGET_RESOLUTION_DATE, enter 12 for Width.
- 8. For P7_ACTUAL_RESOLUTION_DATE, enter 12 for Width.
- 9. Click Apply Changes.
- 10. Click the Edit Page icon in the upper right to return the Page Definition of Page 7.

To move buttons to the Button region:

- 1. Return to the Page Definition for Page 7.
- 2. Under the Buttons section, click the Buttons heading.
- 3. Under Region for all buttons, select Buttons.
- 4. Click Apply Changes.
- 5. Click the Edit Page icon in the upper right to return the Page Definition of Page 7.

Change the Display of Audit Columns Because the Audit columns should be viewable but not editable, you need to make them display only. In the following exercise, you create a condition for the Audit Information region. As a result, the Audit Information region will display when a user edits an existing issue, but will not appear when a user creates a new issue.

To create a condition for the Audit Information region.

- 1. On the Page Definition of Page 7, select the Audit Information region.
- 2. Scroll down to Conditional Display.
- 3. From Condition Type, select Value of Item in Expression 1 is NOT NULL.
- **4.** In Expression 1, enter P7_ISSUE_ID.
- 5. Click Apply Changes.

Next, change the audit columns to display only.

To edit P7_CREATED_DATE:

- 1. Under Items, select P7_CREATED_DATE.
- 2. Under Identification, select Display as Text (saves state) from the Display As list.
- 3. For Label, enter:

Created Date:

- 4. For Template, select **Optional Label with Help**.
- 5. For HTML Table Cell Attributes, enter:

class="instructiontext"

- **6.** Under Source, enter the following in Format Mask: DD-MON-YYYY
- **7.** Click the Next button (>) at the top of the page to navigate to the next item.

To edit P7_CREATED_BY:

- 1. Under Identification, select **Display as Text (saves state)** from the Display As list.
- **2.** For Label, enter:

Created By:

- 3. For Template, select **Optional Label with Help**.
- **4.** For HTML Table Cell Attributes, enter:

class="instructiontext"

5. Click the Next button (>) at the top of the page to navigate to the next item.

To edit P7_LAST_MODIFIED_DATE:

- 1. Under Identification, select **Display as Text (saves state)** from the Display As list.
- **2.** For Label, enter:

Last Modified Date:

- 3. For Template, select Optional Label with Help.
- 4. For HTML Table Cell Attributes, enter:

class="instructiontext"

5. Under Source, for Format Mask, enter:

DD-MON-YYYY

6. Click the Next button (>) at the top of the page to navigate to the next item.

To edit P7_LAST_MODIFIED_BY:

- 1. Under Identification, select **Display as Text (saves state)** from the Display As list.
- **2.** For Label, enter:

Last Modified By:

- 3. For Template, select Optional Label with Help.
- 4. For HTML Table Cell Attributes, enter:

class="instructiontext"

5. Click Apply Changes.

Remove Unnecessary Validations The Wizard created not null validations for Issue Summary, Identified By, Related Project, Status, Created Date, and Created By. Since the Audit columns are set by a trigger, you need to remove these validations.

To remove not null validations:

- 1. Under Validations, select P7_CREATED_DATE not null.
- 2. Click Delete.
- 3. Click OK to confirm your selection.
- 4. Under Validations, select P7_CREATED_BY not null.
- 5. Click Delete.
- 6. Click OK to confirm your selection.

Return the User to the Calling Page Because this Create/Edit page will be called from several places, when users finish with the display, they should return to the calling page. To accomplish this, you create an item and change the branch on this page.

Every time this page is called, the item must be set with the number of the calling page.

To create a hidden item:

- **1.** Under Items, click the **Create** icon.
- 2. For Choose Item Type, select Hidden and click Next.
- 3. On Identify Item Name and Display Position:
 - a. For Item Name, enter: P7_PREV_PAGE
 - **b.** For Region, select **Issue Identification**.
 - c. Click Next.
- 4. Click Create Item.

Next, edit the Cancel button.

- 5. Under Buttons, select Cancel.
- 6. Scroll down to Optional URL Redirect.
- 7. In Page, enter:

&P7_PREV_PAGE.

Note the period at the end.

8. Click Apply Changes.

Next, edit the branch.

- **9.** Under Branching, select the **After Processing** branch.
- **10.** Under Branch Action, enter the following in Page:

&P7_PREV_PAGE.

11. Click Apply Changes.

Add Functionality to Support Adding Multiple Issues Sequentially Next, you will add functionality that will enable users to add more than one issue at time. To accomplish this, you will first add a new button and then a new branch.

To add a new button:

- 1. Under the Buttons section, click the **Copy** icon.
- 2. Under Name, select CREATE.
- 3. For Target Page, accept the default 7 and click Next.
- 4. For Button Name, enter CREATE_AGAIN.
- 5. For Label, enter Create and Create Another.
- 6. Click Copy Button.

Functionally, the Copy Button currently works the same as the CREATE button. Next, create a branch that keeps the user on the create page.

Note that this branch will also reset P7_PREV_PAGE because the value of that item will be lost when the cache of the page is cleared. The sequence of this new branch will

be 0. That will make it fire before the default branch but only when the Create and Create Another button is used.

To create a branch that keeps the user on the create page:

- **1.** Under Branching, click the **Create** icon.
- 2. On Identify Branch Point and Type, accept the defaults and click Next.
- 3. On Identify Target:
 - **a.** For Page, enter 7.
 - **b.** For Clear Cache, enter 7.
 - **c.** For Set these items, enter:

P7_PREV_PAGE

d. For With these values, enter:

&P7_PREV_PAGE.

- e. Click Next.
- 4. On Identify Branch Conditions:
 - **a.** For Sequence, enter 0.
 - b. For When Button Pressed, select CREATE_AGAIN.
- 5. Click Create Branch.
- 6. Under Branching, select the newly created branch.
- 7. Under Branch Action, select include process success message.
- 8. Click Apply Changes.

To see the changes, click the **Run Page** icon. (See Figure 10–9.)

| | Cancel Create | Create and Create Anothe |
|--|------------------------------|--------------------------|
| Issue Identificatio | n | |

| O <u>Status:</u> | O Open O On-Hold O Closed | |
| Priority: | C None C High C Medium C Low | |
| Target Resolution Date | | |
| <u>Progress</u> | | × |

Figure 10–9 Create/Edit Issues Form

The branch you just created is looking for a value in P7_PREV_PAGE. Since the page was not called from another page, the value has not been set. You will fix that next.

Refine the Issues Report

Next, you will refine the Issues report page to support dynamic modification of the query. To accomplish this, you must:

- Move the Create button to a new region and edit the label
- Create new items that will enable the user to restrict the query
- Add a WHERE clause to reference those new items
- Alter the report column attributes to display each person's name and the project
- Modify headings

Move Create Button to a New Region To create a new region of the Create button:

- 1. Navigate to the Page Definition for page 6, Issues.
- 2. Under the Regions section, click the **Create** icon.
- 3. For Select a common region type, accept the default of HTML and click Next.
- 4. For Region Type, select HTML and click Next.
- 5. On Identify Region Attributes:
 - **a.** For Title, enter Buttons.

- b. For Region Template, select Button Region without Title.
- **c.** For Display Point, select **Page Template Body (2. items below region content)**.
- d. Click Next.
- 6. Click Create Region.

To move the Create button to the Buttons region:

- 1. Under Buttons, select the **CREATE** button.
- 2. In Text Label, enter:

Add a New Issue

- 3. From Display in Region, select Buttons.
- 4. Under Optional URL Redirect:
 - **a.** For Set These Items, enter:

P7_PREV_PAGE

- **b.** For With These Values, enter 6.
- 5. Click Apply Changes.

Alter the Query and Display Next, alter the query to display the actual values for people and projects instead of the ID and then clean up the report display.

To edit column attributes for ISSUE_ID:

- 1. Under the Regions section, select **Q** to the left of Issues.
- 2. Click the Edit Icon to the left of ISSUE_ID.
- 3. Scroll down to Column Link.
 - **a.** For Item 2, for Name enter:

P7_PREV_PAGE

- **b.** For Item 2, for Value enter 6.
- 4. Click Apply Changes.

To edit column attributes for IDENTIFIED_BY, RELATED_PROJECT, and ASSIGNED_TO:

- 1. Click the Edit Icon to the left of IDENTIFIED_BY.
- 2. Scroll down to Tabular Form Element. From the Display As list, select **Display as Text (based on LOV, does not save state).**
- 3. Under the List of Values section, for Named LOV, select PEOPLE.
- 4. Return to the top of the page and click the Next (>) icon.

The Column Attributes page for RELATED_PROJECT appears.

- 5. Scroll down to Tabular Form Element. From the Display As list, select **Display as Text (based on LOV, does not save state).**
- 6. Under List of Values:
 - a. For Named LOV, select PROJECTS.
 - **b.** For Display Null, select **Yes**.

- **c.** In Null Text, enter a hyphen (-).
- 7. Return to the top of the page and click the Next (>) icon.

The Column Attributes page for ASSIGNED_TO appears.

- 8. Scroll down to Tabular Form Element. From the Display As list, select **Display as Text (based on LOV, does not save state).**
- 9. Under List of Values:
 - a. For Named LOV, select PEOPLE.
 - **b.** For Display Null, select **Yes**.
 - **c.** In Null Text, enter a hyphen (-).

10. Click Apply Changes.

Next, you will customize how the report displays by changing report attributes.

To alter the report display:

- **1.** For ISSUE_ID, delete the Heading **Edit**.
- 2. For ISSUE_SUMMARY, change Heading to Summary.
- **3.** For TARGET_RESOLUTION_DATE:
 - **a.** Force the heading to wrap. In Heading, enter: Target
br>Resolution
Date
 - **b.** For Column Align., select **center**.
 - c. For Heading Align. select center.
- **4.** For all columns except ISSUE_ID, check **Sort**.
- **5.** For ISSUE_SUMMARY, select 1 for Sort Sequence.
- 6. Scroll down to Layout and Pagination:
 - **a.** For Show Null Values as, enter a hyphen (-).
 - **b.** For Number of Rows, enter 5.
- 7. Under Sorting, select the light gray arrow for Ascending and Descending Image.
- **8.** Under Messages, enter the following in When No Data Found Message:

No issues found.

9. Click Apply Changes.

Add Support of Filtering Although the report now displays nicely, it does not support filtering by the end user. To add this functionality, you will first create items that will enable the user to set values to query against. You will store these new items in a new region which will display above the report.

To create a new region:

- 1. Under the Regions section, click the **Create** icon.
- 2. For Select a common region type, accept the default of HTML and click Next.
- 3. For Region Type, select HTML and click Next.
- 4. On Identify Region Attributes:
 - a. For Title, enter Issue Report Parameters.

- b. For Region Template, select accept the default of Reports Region.
- c. For Sequence, enter 5.
- d. Click Next.
- 5. Click Create Region.

Next, create the items.

To create the item for Identified By:

- 1. Under Items, click the Create icon.
- 2. For Choose Item Type, select **Select List** and click **Next**.
- For Pick Select List Control Type, accept the default selection Select List and click Next.
- 4. On Identify Item Name and Display Position:
 - **a.** For Item Name, enter P6_IDENTIFIED_BY.
 - b. For Region, select Issue Report Parameters.
 - c. Click Next.
- 5. On Identify List of Values:
 - a. For Named LOV, select PEOPLE.
 - **b.** For Null Text, enter:

- All -

c. For Null Value, enter:

-1

- d. Click Next.
- 6. For Identify Item Attributes, accept the defaults and click Next.
- 7. For Default, enter:
 - -1

8. Click Create Item.

To create an item for Assigned To.

- 1. Under Items, click the **Create** icon.
- 2. For Choose Item Type, select Select List and click Next.
- **3.** For Pick Select List Control Type, accept the default selection **Select List** and click **Next**.
- 4. On Identify Item Name and Display Position:
 - **a.** For Item Name, enter P6_ASSIGNED_TO.
 - **b.** For Region, select **Issue Report Parameters**.
 - c. Click Next.
- 5. On Identify List of Values:
 - a. For Named LOV, select PEOPLE.
 - **b.** For Null Text, enter:

- All -

c. For Null Value, enter:

-1

- d. Click Next.
- 6. For Identify Item Attributes, accept the defaults and click Next.
- 7. For Default, enter:

-1

8. Click Create Item.

To create an item for Status.

- 1. Under Items, click the **Create** icon.
- 2. For Choose Item Type, select Select List and click Next.
- **3.** For Pick Select List Control Type, accept the default selection **Select List** and click **Next**.
- 4. On Identify Item Name and Display Position:
 - **a.** For Item Name, enter P6_STATUS.
 - b. For Region, select Issue Report Parameters.
 - c. Click Next.
- 5. On Identify List of Values:
 - a. For Named LOV, select STATUS.
 - **b.** For Null Text, enter:
 - All -
 - c. For Null Value, enter:
 - -1
 - d. Click Next.
- 6. For Identify Item Attributes, accept the defaults and click Next.
- 7. For Default, enter:

-1

8. Click Create Item.

To create an item for Priority.

- 1. Under Items, click the **Create** icon.
- 2. For Choose Item Type, select Select List and click Next.
- **3.** For Pick Select List Control Type, accept the default selection **Select List** and click **Next**.
- 4. On Identify Item Name and Display Position:
 - a. For Item Name, enter P6_PRIORITY.
 - b. For Region, select Issue Report Parameters.

- c. Click Next.
- 5. On Identify List of Values:
 - a. For Named LOV, select PRIORITIES.
 - **b.** For Null Text, enter:

- All -

c. For Null Value, enter:

-1

- d. Click Next.
- 6. For Identify Item Attributes, accept the defaults and click Next.
- 7. For Default, enter:

-1

8. Click Create Item.

To create an item for Related Project.

- 1. Under Items, click the Create icon.
- 2. For Choose Item Type, select Select List and click Next.
- **3.** For Pick Select List Control Type, accept the default selection **Select List** and click **Next**.
- 4. On Identify Item Name and Display Position:
 - **a.** For Item Name, enter P6_RELATED_PROJECT.
 - b. For Region, select Issue Report Parameters.
 - c. Click Next.
- 5. On Identify List of Values:
 - a. For Named LOV, select PRIORITIES.
 - **b.** For Null Text, enter:

- All -

c. For Null Value, enter:

-1

- d. Click Next.
- 6. For Identify Item Attributes, accept the defaults and click Next.
- 7. For Default, enter:

-1

8. Click Create Item.

Next, create a Go button. This button will enable the user to execute the query once they select report parameters. Buttons can be created in region positions or displayed among items. For this exercise, the Go button will display just to the right of the last report parameter so you will create it among the region's items.

To create Go button:

- 1. Under Buttons, click the **Create** icon.
- 2. For Select a region for the button, select Issue Report Parameters and click Next.
- **3.** For Task, select **Create a button displayed among this region's items** and click **Next**.
- 4. For Button Name, enter P6_GO.
- 5. For Button Style, select Template Based Button.
- 6. For Template, select Button.
- 7. Click Create Button.

Currently the items display stacked on top of one another. To use space more efficiently, change the position of P6_RELATED_PROJECT, P6_STATUS, and P6_PRIORITY so they display next to each other. Place P6_RELATED_PROJECT, P6_STATUS on the first line and P6_PRIORITY on the second line.

To change the position of 6_RELATED_PROJECT, P6_STATUS, and P6_PRIORITY:

- 1. Under the Items section, click the heading Items.
- For P6_RELATED_PROJECT, P6_STATUS, and P6_PRIORITY, select No for New Line.
- 3. Click Apply Changes.
- **4.** Click the Edit Page icon in the upper right corner to return to the Page Definition for page 6.

Next, you need to modify the report to react to the parameters. To accomplish this, you need to modify the WHERE clause of the query. One approach would be add the following WHERE clause. For example:

```
WHERE (IDENTIFIED_BY = :P6_IDENTIFIED_BY OR
 :P6_IDENTIFIED_BY = '-1')
AND (RELATED_PROJECT = :P6_RELATED_PROJECT OR
 :P6_RELATED_PROJECT = '-1')
AND (ASSIGNED_TO = :P6_ASSIGNED_TO OR
 :P6_ASSIGNED_TO = '-1')
AND (STATUS = :P6_STATUS OR
 :P6_STATUS = '-1')
AND (PRIORITY = :P6_PRIORITY OR
 :P6_PRIORITY = '-1')
```

Although this is a valid approach, the query will execute faster if you generate it with the WHERE clause that needs it. To accomplish this, turn the Issues region into a PL/SQL Function Body Returning a SQL Query.

To turn the Issues region into a PL/SQL Function Body Returning a SQL Query:

- Under the Regions section, select Issues.
- 2. For Type, select SQL Query (Pl/Sql Function Body Returning Sql Query).
- 3. For Region Source, enter the following:

DECLARE

```
q VARCHAR2(32767); -- query
w VARCHAR2(4000) ; -- where clause
we VARCHAR2(1) := 'N'; -- identifies if where clause exists
```

BEGIN

```
q := 'SELECT "ISSUE_ID", '||
       ' "ISSUE_SUMMARY", '||
       ' "IDENTIFIED_BY", '||
       ' "RELATED_PROJECT", '||
       ' "ASSIGNED_TO", '||
        ' "STATUS", '||
        ' "PRIORITY", '||
        ' "TARGET_RESOLUTION_DATE", '||
        ' "ACTUAL_RESOLUTION_DATE" ' | |
        ' FROM "#OWNER#"."HT ISSUES" ';
  IF :P6_IDENTIFIED_BY != '-1'
     THEN
     w := ' IDENTIFIED_BY = :P6_IDENTIFIED_BY ';
     we := 'Y';
  END IF;
   IF :P6_RELATED_PROJECT != '-1'
     THEN
     IF we = 'Y'
        THEN
        w := w || ' AND RELATED_PROJECT = : P6_RELATED_PROJECT ';
     ELSE
        w := ' RELATED_PROJECT = :P6_RELATED_PROJECT ';
        we := 'Y';
     END IF;
  END IF;
  IF : P6_ASSIGNED_TO != '-1'
     THEN
     IF we = 'Y'
        THEN
        w := w || ' AND ASSIGNED_TO = :P6_ASSIGNED_TO ';
   ELSE
        w := ' ASSIGNED_TO = :P6_ASSIGNED_TO ';
        we := 'Y';
   END IF;
  END IF;
   IF : P6 STATUS != '-1'
     THEN
     IF we = 'Y'
        THEN
        w := w || ' AND STATUS = : P6_STATUS ';
     ELSE
        w := ' STATUS = : P6 STATUS ';
        we := 'Y';
     END IF;
END IF;
   IF : P6_PRIORITY != '-1'
      THEN
      IF we = 'Y'
         THEN
         w := w || ' AND PRIORITY = : P6_PRIORITY ';
       ELSE
         w := ' PRIORITY = :P6_PRIORITY ';
         we := 'Y';
```

```
END IF;
END IF;
IF we = 'Y'
THEN q := q || ' WHERE '|| w;
END IF;
RETURN q;
END;
```

4. Click Apply Changes.

Note that this function first sets the variable q to the original SELECT statement. It then builds WHERE clause (w) composed of just the variables set by the user. If any variables have been set, it appends the WHERE clause to the original SELECT and passes that new SELECT to the database.

The report is now complete. Click the Run Page icon. (See Figure 10–10).

To change the report parameters, make new selections under Issue Report Parameters and click **Go**.

Add a Page to Support Assigning Multiple Issues Simultaneously

Currently, you can assign an issue by editing it. Next, you will add a new page that will enable users to assign multiple issues at once and modify the Related Project, Status and Priority.

Create a Tabular Form To add a new page to support assigning multiple issues:

- **1.** Navigate to the Application Builder home page.
- 2. Click Create Page.
- 3. Select Page with Component and click Next.
- 4. Select Form and click Next.
- 5. Select Tabular Form and click Next.
- 6. For Table/View Owner, select the appropriate schema.

Since the purpose of this form is to enable users to assign issues, it is assumed they will only update existing records, not create or delete issues.

- **7.** To enforce this assumption, select **Update Only** from the Allowed Operations list and click **Next**.
- 8. For Table/View Name, select HT_ISSUES and click Next.
- **9.** For Select Column(s), select the following columns and click **Next**:
 - ISSUE_SUMMARY
 - IDENTIFIED_BY
 - IDENTIFIED_DATE
 - RELATED_PROJECT
 - ASSIGNED_TO
 - STATUS
 - PRIORITY
- 10. For Primary Key Column 1, accept the default ISSUE_ID and click Next.
- 11. For Primary Key Source Type, accept the default Existing trigger and click Next.
- 12. For Updatable Column(s), select the following and click Next:
 - RELATED_PROJECT
 - ASSIGNED_TO
 - STATUS
 - PRIORITY
- **13.** On Identify Page and Region Attributes:
 - **a.** For Page, enter 8.
 - **b.** For Page Name, enter Assign Issues.
 - **c.** For Region Title, enter Assign Issues.
 - d. Click Next.
- 14. For Tab Options, accept the default Do not use tabs and click Next.
- **15.** On Button Labels:
 - **a.** For Cancel Button Label, accept the default.
 - **b.** For Submit Button Label, enter Apply Changes.
 - c. Click Next.
- 16. For Branching, accept the defaults and click Next.
- 17. Review your selections and click Finish.

Add Lists of Values Once you have created the initial tabular form, you need to add lists of values to make it easier to select issues. Additionally, you need to restrict the query to only display unassigned issues.

To add lists of values:

1. From the Success page, select Edit Page.

The Page Definition for page 8, Assign Issues, appears.

- 2. Under Regions, select Assign Issues.
- 3. In **Region Source**, enter the following:

```
SELECT "ISSUE_ID",
 "ISSUE_SUMMARY",
 "IDENTIFIED_BY",
 "IDENTIFIED_DATE",
 "RELATED_PROJECT",
 "ASSIGNED_TO",
 "STATUS",
 "PRIORITY"
FROM "#OWNER#"."HT_ISSUES"
WHERE assigned_to IS NULL
```

To edit report attributes:

- 1. Select the **Report Attributes** tab.
- 2. Under Report Column Attributes:
 - a. For ISSUE_SUMMARY, edit the existing Heading to read: Summary
 - b. For all columns except ISSUE_ID, select Sort.
 - **c.** For IDENTIFIED_DATE, for **Sort Sequence**, select **1**.
- 3. Click the Edit icon to the left of IDENTIFIED_BY and edit the following attributes:
 - **a.** Scroll down to Tabular Form Element. From the Display As list, select **Display as Text (based on LOV, does not save state)**.
 - b. Under List of Values, select **PEOPLE** from the Named LOV list.
 - **c.** Click the Next button (>) at the top of the page to navigate to the next column.
- **4.** Edit the following attributes for IDENTIFIED_DATE:
 - a. Under Column Formatting, enter DD-MON-YYYY in Number/Date Format.
 - **b.** Click the Next button (>) at the top of the page to navigate to the next column.
- **5.** Edit the following attributes for RELATED_PROJECT:
 - a. Scroll down to Tabular Form Element. From Display As, select **Select List** (Named LOV).
 - b. Under List of Values, select PROJECTS from the Named LOV list.
 - **c.** Click the Next button (>) at the top of the page to navigate to the next column.
- 6. Edit the following attributes for ASSIGNED_TO:
 - a. Scroll down to Tabular Form Element. From Display As, select **Select List** (Named LOV).
 - **b.** Under List of Values:

- From the Named LOV list, select PEOPLE.
- For Display Null, select Yes.
- For Null Text, enter a hyphen (-).
- **c.** Click the Next button (>) at the top of the page to navigate to the next column.
- 7. Edit the following attributes for STATUS:
 - a. Scroll down to Tabular Form Element. From Display As, select **Select List** (Named LOV).
 - b. Under List of Values select STATUS from the Named LOV list.
 - **c.** Click the Next button (>) at the top of the page to navigate to the next column.
- 8. Edit the following attributes for PRIORITY:
 - a. Scroll down to Tabular Form Element. From Display As, select **Select List** (Named LOV).
 - **b.** Under List of Values:
 - From Named LOV, select **PRIORITIES**.
 - For Display Null, select Yes.
 - For Null Text, enter a hyphen (-).
 - c. Click Apply Changes.

The Report Attributes page appears.

- **9.** Scroll down to Sorting. Under Ascending and Descending Image, select the light gray arrow.
- **10.** Under Messages, enter the following in When No Data Found Message:

No Unassigned Issues.

11. Click Apply Changes.

The wizard created an unnecessary Cancel button.

To delete the Cancel button:

- 1. On the Page Definition for page 8, select the CANCEL button.
- 2. Click Delete.
- 3. Click OK to confirm your selection.

The tabular form is now complete. To view the new form, click the **Run Page** icon. (See Figure 10–11 on page 10-46.)

Figure 10–11 Assign Issues

To assign an issue, make a selection from the Assigned To list and click **Apply Changes**. Notice that once an issue has been assigned, the issue no longer displays.

Create Summary Reports

Lastly, you will add four summary reports.

Topics in this section include:

- Add a Issue Summary by Project Report
- Add Resolved by Month Identified
- Add Target Resolution Dates
- Add Average Days to Resolve

Add a Issue Summary by Project Report

The Issue Summary report enable users to select a project and then see a summary of issues related to that project. This report includes the following summary information:

- Date first issue identified
- Date last issue closed
- Total number of issues
- Number of issues by status
- Number of open issues by priority
- Assignments by status

To create this report, you will code the information in two SQL statements. The first statement gathers information having a a singular result and the second statement gathers information having multiple results.

To add an Issue Summary by Project report:

1. Navigate to the Application Builder home page.

- 2. Click Create Page.
- 3. Select Page with Component and click Next.
- 4. On Select Component Type, select Report and click Next.
- 5. Select SQL Report and click Next.
- 6. On Identify Page Attributes:
 - a. For Page, enter 9.
 - b. For Page Name, enter Issue Summary by Project.
 - c. Click Next.
- 7. For Tab Options, accept the default **Do not use tabs** and click **Next**.
- 8. Enter the following SQL SELECT statement and click Next:

```
SELECT MIN(identified_date) first_identified,
      MAX(actual_resolution_date) last_closed,
      COUNT(issue_id) total_issues,
      SUM(DECODE(status, 'Open',1,0)) open_issues,
      SUM(DECODE(status, 'On-Hold',1,0)) onhold_issues,
      SUM(DECODE(status, 'Closed',1,0)) closed_issues,
      SUM(DECODE(status,
                'Open',decode(priority,null,1,0),
                 0))
                                       open_no_prior,
      SUM(DECODE(status,
                 'Open',decode(priority,'High',1,0),
                 0))
                                       open_high_prior,
      SUM(DECODE(status,
                'Open',decode(priority,'Medium',1,0),
                 0))
                                       open_medium_prior,
       SUM(DECODE(status,
                 'Open',decode(priority,'Low',1,0),
                                      open_low_prior
                 0))
  FROM ht_issues
WHERE related_project = :P9_PROJECT
```

- **9.** On Report Attributes:
 - a. For Report Template, select **default: vertical report, look 1 (include null columns)**.
 - b. For Region Name, enter Issue Summary by Project.
 - c. Click Next.
- **10.** Review your selections and click **Finish**.

Now that you have the first query, you need to edit the headings and create the item to control the related project. First, create a region to display above the report and that will contain the Project parameter.

Create a New Region To create a new region to display above the report:

1. From the Success page, click **Edit Page**.

The Page Definition for page 9, Issue Summary by Project appears.

- 2. Under the Regions section, click the **Create** icon.
- 3. For Select a common region type, accept the default of HTML and click Next.
- 4. On Region Type, select HTML and click Next.

- **5.** On Identify Region Attributes:
 - a. For Title, enter Issue Summary Report Parameters.
 - **b.** For Display Point, select **Page Template Body (2. items below region content)**.
 - c. For Sequence, enter 5.
 - d. Click Next.
- 6. Click Create Region.

Create the Project Item To create the Project item:

- 1. Under Items, click the **Create** icon.
- 2. For Choose Item Type, select **Select List** and click **Next**.
- 3. For Pick Select List Control Type, accept the default Select List and click Next.
- 4. On Identify Item Name and Display Position:
 - **a.** For Item Name, enter P9_PROJECT.
 - b. For Region, select Issue Summary Report Parameters.
 - c. Click Next.
- 5. On Identify List of Values:
 - **a.** For Named LOV, select **PROJECTS**.
 - **b.** For Null Text, enter:
 - Select -
 - **c.** For Null Value, enter -1.
 - d. Click Next.
- 6. On Identify Item Attributes, accept the defaults and click Next.
- **7.** For Default, enter -1.
- 8. Click Create Item.

Create a Go Button To create a Go button to execute the query:

- 1. Under Buttons, click the **Create** icon.
- 2. For Select a Region, select Issue Summary Report Parameters and click Next.
- **3.** For Task, select **Create a button displayed among this region's items** and click **Next**.
- 4. On Identify Button within Items Attributes:
 - **a.** For Button Name, enter P9_GO.
 - **b.** For Button Style, select **Template Based Button**.
 - c. For Template, select Button.
- 5. Click Create Button.

Edit Headings and Report Settings Next, you need to edit the headings and report setting for the report region. You also need to set the report regions to conditionally display when the user has selected a project.

To edit the headings and report settings:

- 1. Under Regions, select the Q adjacent to Issue Summary by Project.
- 2. For Headings Type, select Custom.
- 3. Under Report Column Attributes:
 - a. Change the Heading for FIRST_IDENTIFIED to: First Issue Identified:
 - b. Change the Heading for LAST_CLOSED to: Last Issue Closed:
 - c. Change the Heading for TOTAL_ISSUES to: Total Issues:
 - d. Change the Heading for OPEN_ISSUES to: Open Issues:
 - e. Change the Heading for ONHOLD_ISSUES to: On-Hold Issues:
 - f. Change the Heading for CLOSED_ISSUES to: Closed Issues:
 - g. Change the Heading for OPEN_NO_PRIOR to: Open Issues with No Priority:
 - h. Change the Heading for OPEN_HIGH_PRIOR: Open Issues of High Priority:
 - i. Change the Heading for OPEN_MEDIUM_PRIOR to: Open Issues of Medium Priority:
 - j. Change the Heading for OPEN_LOW_PRIOR: Open Issues of Low Priority:
- 4. Under the Layout and Pagination section:
 - **a.** For Show Null Values as, enter a hyphen (-).
 - b. For Pagination Scheme, select No Pagination Selected -.
- 5. Select the **Region Definition** tab at the top of the page.
 - a. Scroll down to Conditional Display.
 - **b.** For Condition Type, select **Value of Item in Expression 1 Is NOT Contained** within Colon Delimited List in Expression 2.
 - **c.** In Expression 1, enter P9_PROJECT.
 - **d.** For Expression 2, enter –1.
- 6. Click Apply Changes.

Create a Query to Retrieve Assignments To create a query to retrieve assignments by status.

- 1. Under the Regions section, click the **Create** icon.
- 2. For Select a common region type, select **Report** and click **Next**.
- 3. For Report Implementation, select SQL Report and click Next.
- 4. On Identify Region Attributes:
 - a. For Title, enter Assignments by Status.
 - **b.** For Column, select **2**.
 - c. Click Next.
- 5. On Page Region Source:
 - a. In Enter SQL Query, enter:

- **b.** For Rows Per Page, enter 20.
- c. For Break Columns, select Column 1.
- d. Click Next.
- 6. On Identify Display Conditions:
 - a. From Condition Type, select Value of Item in Expression 1 Is NOT Contained within Colon Delimited List in Expression 2.
 - **b.** In Expression 1 enter:

P9_PROJECT

- **c.** For Expression 2 enter -1.
- 7. Click Create Region.

To edit headings and report settings:

- 1. Under Regions, select **Q** adjacent to **Assignments by Status**.
- 2. For Headings Type, select Custom.
- 3. For PERSON_NAME, change Heading to Assigned To.
- Scroll down to Layout and Pagination. From Pagination Scheme, select Row Ranges 1-15 16-30 in select list.
- 5. Under Messages, enter the following in When No Data Found Message:

No Issues found.

6. Click Apply Changes.

To see your newly created report, click the **Run Page** icon. Note that initially no data displays since no project is selected. Select a project. Your report should resemble Figure 10–12.

Figure 10–12 Issue Summary by Project Report

Add Resolved by Month Identified

The Resolved by Month Identified report is a line chart. This report first calculates the number of days it took to resolve each closed issue, averaged by the month the issue was identified, and finally displayed by the month.

To add a Resolved by Month Identified report:

- **1.** Navigate to the Application Builder home page.
- 2. Click Create Page.
- 3. Select Page with Component and click Next.
- 4. Select Chart and click Next.
- 5. Select Line and click Next.
- 6. On Identify Page Attributes:
 - **a.** For Page, enter 10.
 - **b.** For Page Name and Region Name, enter Resolved by Month Identified.
 - c. Click Next.
- 7. For Tab Options, accept the default **Do not use tabs** and click **Next**.
- **8.** On Series Query:
 - a. For Series Name, enter Resolved.
 - **b.** In **SQL**, enter:

```
SELECT NULL 1,
    TO_CHAR(identified_date,'Mon YYYY') month,
    AVG(actual_resolution_date-identified_date) days
    FROM ht_issues
    WHERE status = 'Closed'
```

GROUP BY TO_CHAR(identified_date,'Mon YYYY')

Note that this query has no link (that is, the l column). It extracts the month from the identified date so that the data can be grouped by month. Lastly, it calculates the average number of days it took for the issues to be closed that were identified in that month.

c. For When No Data Found Message, enter:

No Closed Issues found.

9. Click Next.

10. Review your selections and click **Finish**.

Next, add a correct axis label and turn off the Chart Title and legend.

To edit the chart:

1. From the Success page, select Edit Page.

The Page Definition for page 10, Resolved by Month Identified, appears.

- 2. Under Regions, select Chart to the left of Resolved by Month Identified.
- 3. Under Chart Settings:
 - a. For Chart Height, enter 300.
 - **b.** Disable Show Legend.
- 4. Under the Axes Setting section:
 - **a.** For X Axis Title, enter Date Identified.
 - **b.** For Y Axis Title, enter Days to Resolve.
- 5. Click Apply Changes.

To view your newly created line chart, click the **Run Page** icon. Your line chart should resemble Figure 10–13.

Figure 10–13 Resolved by Month Identified Line Chart

Add Target Resolution Dates

The Target Resolution Dates report is a calendar which displays issues that have not yet closed and the assigned person on the day that corresponds to the issue target resolution date.

Create a Calendar To create a calendar of target resolution dates:

- 1. Navigate to the Application Builder home page.
- 2. Click Create Page.
- 3. Select Page with Component and click Next.
- 4. Select Calendar and click Next.
- 5. Select SQL Calendar and click Next.
- 6. On Identify Page Attributes:
 - **a.** For Page, enter 11.
 - **b.** For Page Name and Region Name, enter Target Resolution Dates.
 - c. Click Next.
- 7. For Tab Options, accept the default **Do not use tabs** and click **Next**.
- 8. For Enter SQL Query, enter the following and click Next:

Note that:

- The target_resolution_date is the date on which the issue will display
- The issue_summary is concatenated with the person assigned
- The issue_id will not display, but will be used to create a link to enable the user to view and edit the issue
- 9. On Identify Calendar Columns:
 - a. For Date Column, select TARGET_RESOLUTION_DATE.
 - **b.** For Display Column, select **DISP**.
 - c. Click Next.
- 10. Review your selections and click Finish.

Add an Item to Support Project Look Up To enable the user to look up one project or all projects, you need to add an item.

To add an item to support project look up:

1. From the Success page, select Edit Page.

The Page Definition for page 11, Target Resolution Dates, appears.

- 2. Under Items, click the **Create** icon.
- 3. For Choose Item Type, select Select List and click Next.
- 4. For Pick Select List Control Type, accept the default of Select List and click Next.
- 5. For Item Name, enter P11_PROJECT and click Next.
- 6. On Identify List of Values:
 - **a.** For Named LOV, select **PROJECTS**.
 - **b.** For Null Text, enter:
 - All Projects -
 - c. For Null Value, enter:

-1

- d. Click Next.
- 7. For Item Attributes, accept the defaults and click Next.
- 8. For **Default**, enter:

-1

9. Click Create Item.

Create a Go Button To create a Go button to execute the query:

- 1. Under Buttons, click the **Create** icon.
- 2. For the Region, select Target Resolution Dates and click Next.
- **3.** For Task, select Create a button displayed among this region's items and click Next.
- 4. On Identify Button within Items Attributes:
 - **a.** For Button Name, enter P11_GO.
 - b. For Button Style, select Template Based Button.
 - c. For Template, select Button.
- 5. Click Create Button.

Modify Calendar Attributes Lastly, you need to modify the Calendar Attributes to add link support for viewing and editing the displayed issues. To accomplish this, you need to call page 7, View/Edit Issues, clear any data from the page and pass in the current issue ID along with the fact that page 11 was the calling page. Then, you need to add a note that displays when the query excludes Closed issues.

To modify the Calendar Attributes:

- 1. Under Regions, select CAL to the left of Target Resolution Dates.
- 2. Scroll down to Column Link:
 - a. For Page, enter 7.
 - **b.** For Clear Cache, enter 7.
 - c. For Set these items, enter:
P7_ISSUE_ID, P7_PREV_PAGE

d. For With these values, enter:

#ISSUE_ID#,11

- 3. Select the **Region Definition** tab.
- 4. Scroll down to Header and Footer Text.
- 5. Enter the following in Region Footer:

This excludes Closed issues.

6. Click Apply Changes.

To see your newly created calendar, click the **Run Page** icon. Your report should resemble Figure 10–14 on page 10-55. Note that you can click the text displayed for an issue to display the Edit Issue page. To return to the calendar, click **Cancel**.

Add Average Days to Resolve

The Average Days to Resolve report is a bar chart that calculates the number of days it takes to resolve each closed issue and then averages that number that by assigned person.

To add the Average Days to Resolve report:

- **1.** Navigate to the Application Builder home page.
- 2. Click Create Page.
- 3. Select Page with Component and click Next.
- 4. Select Chart and click Next.
- 5. Select Bar (HTML) and click Next.
- 6. On Identify Page Attributes:
 - **a.** For Page, enter 12.
 - **b.** For Page Name, enter Average Days to Resolve.
 - c. For Region Name, enter Average Days to Resolve.
 - d. Click Next.
- 7. For Tab Options, accept the default Do not use tabs and click Next.
- 8. On Identify Chart Attributes:
 - a. In Chart SQL, enter:

```
SELECT NULL 1,
    NVL(p.person_name,'None Assigned') person,
    AVG(i.actual_resolution_date-i.identified_date) days
    FROM ht_issues i,
        ht_people p
WHERE i.assigned_to = p.person_id (+)
    AND i.status = 'Closed'
    GROUP BY p.person_name
```

In the above SELECT statement:

- The first item selected is the link. Because this report will not link to any other page, NULL was selected.
- The second item is the person's name, or None Assigned if assigned_ to is NULL.
- The third item selected is the average number of days it took for that person to resolve all their issues so the issues have a status of closed.
- **b.** For Include in summary, select only **Number of data points**. Deselect all other options.
- c. Click Next.
- 9. Review your selections and click Finish.

To view your newly created bar chart, select **Run Page**. Your report should resemble Figure 10–15.

Figure 10–15 Average Days to Resolve Report

Add Content to the Home Page

Now that you have completed all the detail pages, next you need to add content to the home page and tie all the pages together. In this section, you modify the home page to display the following information:

- A menu of all available reports
- Navigation to the maintenance pages
- A button to Add a New Issue
- Overdue Issues
- Recently Opened Issues
- Open Issues by Project as a chart
- Unassigned Issues

Topics in this section include:

- Add a Reports Menu
- Add Maintenance Navigation
- Add a New Issues Button
- Add Overdue Issues Report
- Add Unassigned Issues Report
- Add Recently Opened Issues Report
- Add Open Issues by Project

Add a Reports Menu

First, you add a menu implemented as a list.

To add a menu:

- **1.** Navigate to the Application Builder home page.
- 2. Select Shared Components.
- 3. Under the Navigation section, select Lists.
- 4. Click **Create List**.
- 5. For Name, enter Main Menu.
- 6. For List Template, select Vertical Sidebar List.
- 7. Click Create.

Create List Entries Now that the list has been created, you add list items to it. You need to add one list item for each report page.

To add a list item for Assign Issues:

- 1. Click Create List Entry.
- 2. For List, select Main Menu.
- 3. For List Entry Label, enter Assign Issues.
- **4.** Under the Target section:
 - **a.** For Page, select **8**.
 - **b.** Select reset pagination for this page.
- 5. Click Create.

Now you will create four more list items, one for each of the other reports in your application.

To add list items for each of the other reports in your application:

- 1. Click Create List Entry.
- 2. To define list item attributes for Issues:
 - **a.** For List, select **Main Menu**.
 - **b.** For Sequence, enter 20.
 - c. For List Entry Label, enter Issues.
 - **d.** Under the Target section:
 - For Page, select 6.
 - Select reset pagination for this page.
 - For Clear Cache, enter 6.

This clears any selections for page 6 from the session state.

- 3. Click Create and Create Another.
- **4.** To define list item attributes for Issue Summary:
 - **a.** For List, select **Main Menu**.
 - **b.** For Sequence, enter 30.
 - c. For List Entry Label, enter Issue Summary by Project.
 - **d.** Under the Target section:
 - For Page, select 9.

- Select reset pagination for this page.
- For Clear Cache, enter 9.
- 5. Click Create and Create Another.
- 6. To define list item attributes for Resolved by Month Identified:
 - a. For List, select Main Menu.
 - **b.** For Sequence, enter 40.
 - c. For List Entry Label, enter Resolved by Month Identified (chart).
 - d. Under the Target section, select 10 for Page.
- 7. Click Create and Create Another.
- 8. To define list item attributes for Target Resolution Dates:
 - **a.** For List, select **Main Menu**.
 - **b.** For Sequence, enter 50.
 - c. For List Entry Label, enter Target Resolution Dates (calendar).
 - d. Under the Target section:
 - For Page, select **11**.
 - Select **reset pagination for this page**.
- 9. Click Create and Create Another.
- **10.** To define list item attributes for Average Days to Resolve:
 - a. For List, select Main Menu.
 - **b.** For Sequence, enter 60.
 - c. For List Entry Label, enter Average Days to Resolve (chart).
 - d. Under Target, select 12 for Page.
- 11. Click Create.

Include the List on the Home Page Now that the list is created, you need to include it on the home page. To display the list in the left margin, you need to change the page template to one that supports the appropriate region position.

To change the page template on the home page:

1. Click the Edit Page icon.

The Page Definition for page 12, Average Days to Resolve, appears.

- **2.** In the Page field, enter 1 and click **Go**.
- 3. Click Edit Attributes.

Page Attributes for page 1 appears.

- 4. Locate Primary Display Attributes.
- 5. From the Page Template list, select 10. No Tabs with Sidebar.
- 6. Click Apply Changes.

Next, create a region to contain your menu.

To create a a new region:

- 1. Under Regions, click the **Create** icon.
- 2. For Select a common region type, select List and click Next.
- **3.** In Identify Region Attributes:
 - a. For Title, enter Menu.
 - b. For Region Template, select No Template.
 - **c.** For Display Point, select **Page Template Region Position 2** (or select the quick link **[Pos. 2]**.
 - d. Click Next.
- 4. For List, select Main Menu.
- 5. Click Create List Region.

Add Maintenance Navigation

Next, you will add maintenance navigation as a list. This list will display just below the reports in the left margin.

- **1.** Navigate to the Application Builder home page.
- 2. Select Shared Components.
- **3.** Under the Navigation section, select **Lists**.
- 4. Click Create List.
- 5. For Name, enter Maintenance.
- 6. For List Template, select Vertical Sidebar List.
- 7. Click Create.

Next, create three list items. The first list item acts as a separator between the two navigation regions. The other two enable users to view people and projects.

To add list items:

- 1. Click Create List Entry.
- **2.** To define list item attributes for the first list item:
 - **a.** For List, select **Maintenance**.
 - **b.** For List Entry Label, enter:

- c. Under Target, select 1 for Page.
- 3. Click Create and Create Another.
- 4. To define list item attributes for Projects:
 - **a.** For List, select **Maintenance**.
 - **b.** For Sequence, enter 20.
 - c. For List Entry Label, enter:

Projects

- **d.** Under the Target section:
 - For Page, select 2.

- Check reset pagination for this page.
- 5. Click Create and Create Another.
- 6. To define list item attributes for People:
 - **a.** For List, select **Maintenance**.
 - **b.** For Sequence, enter 30.
 - c. For List Entry Label, enter:

People

- d. Under the Target section:
 - For Page, select 4.
 - Check reset pagination for this page.
- 7. Click Create.

To create a region to display the new list.

- **1.** Click the Edit Page icon.
- 2. Under Regions, click the Create icon.
- 3. For Select a common region type, select List and click Next.
- 4. On Identify Region Attributes:
 - a. For Title, enter Maintenance.
 - b. For Region Template, select No Template.
 - For Display Point, select Page Template Region Position 2 (or select the quick link [Pos. 2].
 - d. Click Next.
- 5. For List, select Maintenance.
- 6. Click Create List Region.

Add a New Issues Button

Next, you create a button to navigate the user to page 7, Create/Edit Issue.

To create a region to contain the button:

- 1. Under Regions, click the **Create** icon.
- 2. For Select a common region type, accept the default of HTML and click Next.
- 3. On Identify Region Attributes:
 - a. For Title, enter Buttons.
 - **b.** For Region Template, select **No Template**.
 - c. For Display Point, select Page Template Region Position 1 (or select the quick link [Pos. 1].
 - d. Click Next.
- 4. Click Create Region.

To add a button:

1. Under the Buttons section, click the **Create** icon.

- 2. For Region, select Buttons and click Next.
- 3. For Task, accept the default Create a button in a region position and click Next.
- 4. On Identify Button Name and Label:
 - a. For Button Name, enter ADD.
 - **b.** For Label, enter:

Add a New Issue

- c. For Action, select Redirect to URL without submitting page.
- d. Click Next.
- 5. For Button Template, select **Button** and click **Next**.
- 6. For Position, select Top of Region and click Next.

On the Branching page, you need to call the correct page, clear the cache, and specify that the Create and Cancel buttons returns the user to the home page.

- 7. On Branching:
 - a. For Page, select 7.
 - **b.** For Clear Cache, enter 7.
 - c. For Set these items, enter:

P7_PREV_PAGE

- **d.** For With these values, enter 1.
- 8. Click Create Button.

Add Overdue Issues Report

Next, add some content to the home page. In this exercise you add a report to display overdue issues. The query for this report retrieves all unclosed issues with a past target resolution date.

To add a report to display overdue issues:

- 1. Under the Regions section, click the **Create** icon.
- 2. For Select a common region type, select Report and click Next.
- 3. For Report Implementation, select SQL Report and click Next.
- 4. On Identify Region Attributes, enter Overdue Issues for Title and click Next.
- 5. For Enter SQL Query, enter:

```
SELECT i.issue_id,
    i.priority,
    i.issue_summary,
    p.person_name assignee,
    i.target_resolution_date,
    r.project_name
FROM ht_issues i,
    ht_people p,
    ht_projects r
WHERE i.assigned_to = p.person_id (+)
AND i.related_project = r.project_id
AND i.target_resolution_date < sysdate
AND i.status != 'Closed'
```

The outer join is necessary because the assignment is optional.

6. Click Create Region.

Now that the region has been created, you need to edit the headings and turn the summary into a link to display the issue details.

To edit the column headings:

- 1. Under Regions, select **Q** to the left of Overdue Issues.
- 2. For Headings Type, select Custom.
- **3.** For ISSUE_ID, remove the Heading.
- **4.** For ISSUE_SUMMARY, edit the Heading to read:

Summary

5. For ASSIGNEE, change the Heading to:

Assigned To

- 6. For TARGET_RESOLUTION_DATE:
 - **a.** For Heading, enter:

Target
Resolution
Date

- b. For Column Align, select center.
- c. For Heading Align, select center.
- 7. For ISSUE_ID, deselest Show.

This enables the query to pass in the link, but not display it.

- 8. Select Sort for all columns except ISSUE_ID.
- 9. For TARGET_RESOLUTION_DATE, select 1 for Sort Sequence.
- **10.** For ISSUE_SUMMARY, select 2 for Sort Sequence.

To edit column attributes for ISSUE_SUMMARY:

- 1. Click the Edit icon to the left of ISSUE_SUMMARY.
- **2.** Scroll down to Column Link:
 - a. For Link Text, use the quick link of [Icon 3].
 - **b.** For Page, select 7.
 - c. For Clear Cache, select 7.
 - **d.** For Item 1, enter the Name: P7_ISSUE_ID
 - e. For Item 1, enter the Value:#ISSUE_ID#
 - f. For Item 2, enter the Name: P7_PREV_PAGE
 - g. For Item 2, enter the Value:

1

3. Click Apply Changes.

To select layout and pagination attributes:

- 1. Scroll down to Layout and Pagination:
 - a. For Pagination Scheme, select Search Engine 1,2,3,4 (set based pagination).
 - **b.** For Number of Rows, enter 5.
- 2. Under Sorting, select the light gray arrow for Ascending and Descending Image.
- **3.** Under the Messages section, enter the following in When No Data Found Message:

No Overdue Issues.

4. Click Apply Changes.

Add Unassigned Issues Report

The next report you add displays unassigned, open issues. This report is very similar to Overdue Issues. Rather than creating it manually, you will copy the Overdue Issues report and modify it.

To create the Unassigned Issues report by copying an existing report:

- 1. Under **Regions**, click the Copy icon.
- 2. Under Name, select Overdue Issues.
- 3. For To Page, accept the default 1 and click Next.
- 4. For Region Name, enter Unassigned Issues.
- 5. Click Copy Region.

To modify the query and edit the report region:

- 1. Under the Regions section, select Unassigned Issues.
- 2. For Region Source, enter:

3. Select the **Report Attributes** tab.

Note that previously defined columns have retained their modified attributes.

4. For IDENTIFIEE, enter the following Heading:

Identified By

5. Under Messages, enter the following in When No Data Found Message:

No Unassigned Issues.

6. Click Apply Changes.

Add Recently Opened Issues Report

Lastly, you will add a report of recently opened issues. The underlying query displays the five most recently opened issues. As in the existing exercise, you will copy an existing report and modify it.

To create a report of recently opened issues by copying an existing report:

- 1. Under Regions, click the **Copy** icon.
- 2. Under Name, select Unassigned Issues.
- 3. For To Page, accept the default 1 and click Next.
- 4. For Region Name, enter Recently Opened Issues.
- 5. Click Copy Region.

To modify the query and edit the report region:

- 1. Under Regions, click the **Q** to the left of Recently Opened Issues.
- 2. For all columns:
 - a. Disable sorting by deselecting Sort.
 - **b.** Set Sequence to -.
- **3.** Select the **Region Definition** tab.
- 4. For **Region Source**, enter:

```
SELECT issue_id,
      priority,
      issue_summary,
      assignee,
      target_resolution_date,
      project_name,
      identifiee
FROM
(
SELECT i.issue_id,
      i.priority,
      i.issue_summary,
      p.person_name assignee,
      i.target_resolution_date,
      r.project_name,
      p2.person_name identifiee
 FROM ht_issues i,
      ht_people p,
      ht_people p2,
      ht_projects r
WHERE i.assigned_to = p.person_id (+)
  AND i.related_project = r.project_id
  AND i.identified_by = p2.person_id
  AND i.created_date > (sysdate - 7)
ORDER BY i.created_date desc
)
WHERE rownum < 6
```

- 5. Select the **Report Attributes** tab.
- **6.** For ASSIGNEE, click the gray up arrow to the right of the Edit column until ASSIGNEE is just after ISSUE_SUMMARY.
- 7. For ASSIGNEE, change Heading to:

Assigned To

- **8.** Scroll down to Layout and Pagination section. From the Pagination Scheme list, select **No Pagination Selected** -.
- **9.** Under the Messages section, enter the following in When No Data Found Message:

No Recently Opened Issues.

10. Click **Apply Changes**.

Add Open Issues by Project

Next, add a pie chart displaying Open Issues by Project.

To add a pie chart:

- 1. Under Regions, click the Create icon.
- 2. For Select a common region type, select Chart and click Next.
- 3. Select Pie and click Next.
- 4. For Title, enter Open Issues by Project and click Next.
- 5. For Enter SVG Chart SQL Query, enter:

```
SELECT NULL LINK,
    NVL(r.project_name,'No Project') label,
    COUNT(r.project_name) value
    FROM ht_issues i,
        ht_projects r
    WHERE i.status = 'Open'
    AND i.related_project = r.project_id
    GROUP BY NULL, r.project_name
    ORDER BY r.project_name
```

Note that this query does not include a link, the label is the Project Name, and the value calculated and used for the pie chart is the total number of open issues by project.

6. Click Create Region.

To edit the chart.

- 1. Under Regions, select Chart to the left of Open Issues by Project.
- 2. For Chart Width, enter 500.
- **3.** For Chart Height, enter 200.
- **4.** For Chart Title, remove the title.
- Under Chart Query, enter the following in When No Data Found Message: No Open Issues.
- 6. Under Font Settings, for Legend select 14 for the Font Size.

7. Click Apply Changes.

To view the revised page, click the **Run Page** icon. Your home page should resemble Figure 10–16.

Figure 10–16 Revised Home Page

Add a Breadcrumb Menu

In the previous exercise, you created menus on the home page to enable users to navigate to various pages within your application. Next, you need to provide users with a way to navigate to the home page. You can accomplish this by adding a breadcrumb menu.

In the next exercise, you create a menu, add menu options to it and then include that menu within a region on page 0. Adding components to page 0 makes them display on all pages with an application.

Topics in this section include:

- Create a Breadcrumb Menu
- Add Menu Options
- Create a Page 0
- Create a Region to Contain the Menu

Create a Breadcrumb Menu

To create a breadcumb menu:

- 1. Navigate to the Application Builder home page.
- 2. Click Shared Components.
- 3. Under Navigation, select Menus.

- 4. Click Create.
- 5. For Name, enter Breadcrumb.
- 6. Click Create.

Add Menu Options

Next, add menu options.

To create a menu option for page 1:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - b. For Page, enter 1.
- 3. For Short Name, enter Home.
- 4. Under Menu Target, enter 1 in Page.
- 5. Click Create.

To create a menu option for page 2:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - **b.** For Page, enter 2.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - **b.** For Short Name, enter Projects.
- 4. Under Menu Target, enter 2 in Page.
- 5. Click Create.

To create a menu option for page 3:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - **b.** For Page, enter 3.
- **3.** Under Menu Option:
 - a. For Parent Menu Option, select Projects.
 - **b.** For Short Name, enter Create/Edit Projects.
- 4. Under Menu Target, enter 3 in Page.
- 5. Click Create.

To create a menu option for page 4:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.

- b. For Page, enter 4.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - **b.** For Short Name, enter People.
- 4. Under Menu Target, enter 4 in Page.
- 5. Click Create.

To create a menu option for page 5:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - **b.** For Page, enter 5.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select People.
 - b. For Short Name, enter Create/Edit Person Information.
- 4. Under Menu Target, enter 5 in Page.
- 5. Click Create.

To create a menu option for page 6:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - **b.** For Page, enter 6.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - **b.** For Short Name, enter Issues.
- 4. Under Menu Target, enter 6 in Page.
- 5. Click Create.

To create a menu option for page 7:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - **b.** For Page, enter 7.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - **b.** For Short Name, enter Create/Edit Issue.
- 4. Under Menu Target, enter 7 in Page.
- 5. Click Create.

To create a menu option for page 8:

- **1.** Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - **b.** For Page, enter 8.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - **b.** For Short Name, enter Assign Issues.
- 4. Under Menu Target, enter 8 in Page.
- 5. Click Create.

To create a menu option for page 9:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - **a.** For Menu, select **Breadcrumb**.
 - **b.** For Page, enter 9.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - b. For Short Name, enter Issue Summary by Project.
- 4. Under Menu Target, enter 9 in Page.
- 5. Click Create.

To create a menu option for page 10:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - **b.** For Page, enter 10.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - **b.** For Short Name, enter Resolved by Month Identified.
- 4. Under Menu Target, enter 10 in Page.
- 5. Click Create.

To create a menu option for page 11:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - **a.** For Menu, select **Breadcrumb**.
 - **b.** For Page, enter 11.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - b. For Short Name, enter Target Resolution Dates.

- 4. Under Menu Target, enter 11 in Page.
- 5. Click Create.

To create a menu option for page 12:

- 1. Click Create Menu Option.
- 2. Under Menu Identification:
 - a. For Menu, select Breadcrumb.
 - **b.** For Page, enter 12.
- 3. Under Menu Option:
 - a. For Parent Menu Option, select Home.
 - b. For Short Name, enter Average Days to Resolve.
- **4.** Under Menu Target, enter 12 in Page.
- 5. Click Create.

Create a Page 0

Now that the menu exists, you need to create page 0 and then create a region to contain your Breadcrumb menu.

To create page 0:

- 1. Navigate to the Application Builder home page.
- 2. Click Create Page.
- 3. Select Blank Page and click Next.
- 4. For Page, enter 0 and click Next.
- 5. For Name, enter Breadcrumbs and click Next.
- 6. On Identify Tabs, accept the default No and click Next.
- 7. Review your selections and click Finish.

Create a Region to Contain the Menu

To create a region to contain your Breadcrumb menu:

1. From the Success page, select Edit Page.

The Page Definition for page 0 appears.

- 2. Under Regions, click the Create icon.
- **3.** For Select a common region type, select **Menu** and click **Next**.
- 4. For Identify Region Attributes:
 - a. For Title, enter Breadcrumbs.
 - b. For Region Template, select No Template.
 - c. For Display Point, select Page Template Region Position 1.

This selection displays the menu above all other content on the page.

- d. Click Next.
- 5. For Identify Menu:
 - a. For Menu, select Breadcrumbs.

b. For Menu Template, select **Breadcrumb Menu**.

6. Click Create Menu Region.

Return to the home page by clicking the Next Page icon (>). The Page Definition for page 1 appears. To see your completed home page, click the **Run Page** icon. Your home page should resemble Figure 10–17.

Notice the Breadcrumb in the top bar. Click one of the items on the Maintenance menu on the left side of the page. Notice how the breadcrumb menu changes.and watch the breadcrumb change.

At this stage your application is fully functional, but is missing the security and email notification. Those topics will be discussed in the next section.

Adding Advanced Features

Once your application is fully functional you can focus on adding advanced features outlined during the planning and project analysis phase.

Topics in this section include:

- Add Support for E-mail Notification
- Add Application Security

Add Support for E-mail Notification

The planning and project analysis phase produced two e-mail requirements:

Notify people when an issue is assigned to them

Notify the project lead when any issue becomes overdue

Topics in this section include:

- How E-mail Notification Works
- Add Notification of New Assignments
- Add a Notification for Overdue Issues

How E-mail Notification Works

To send mail from within an Oracle HTML DB application, you create a PL/SQL process that calls the supplied HTMLDB_MAIL package.

E-mail is not sent immediately from Oracle HTML DB, but is stored in a temporary queue until a DBMS_JOB pushes the queue. The DBMS_JOB utilizes two preferences named SMTP_HOST_ADDRESS and SMTP_HOST_PORT to send mail in the queue. By default, these preferences are set to localhost and 25.

If the server where Oracle HTML DB is installed is not configured for SMTP services, you will need to change the SMTP_HOST_ADDRESS preference. Check with your Oracle HTML DB administrator to make sure the instance you are using is properly configured to send e-mail.

The following is a description of the SEND procedure of the HTMLDB_MAIL package.

| PROCEDURE SEND
Argument Name | Туре | In/Out | Default? |
|---------------------------------|----------|--------|----------|
| P_TO | VARCHAR2 | IN | |
| P_FROM | VARCHAR2 | IN | |
| P_BODY | VARCHAR2 | IN | |
| P_BODY_HTML | VARCHAR2 | IN | DEFAULT |
| P_SUBJ | VARCHAR2 | IN | DEFAULT |
| P_CC | VARCHAR2 | IN | DEFAULT |
| P_BCC | VARCHAR2 | IN | DEFAULT |
| | | | |

Add Notification of New Assignments

First, you will add a notification to a person when he or she has a new assignment. An assignment can be made or changed from two different pages

- Create/Edit Issue
- Assign Issues.

On the Create/Edit Issue page, you can store the initial values and then check them against any changes to see if an assignment has been made or changed. Because Assign Issues is a tabular form, there is no way to check the old values against the new values. For that reason, the best way to implement the notification is with a before insert and update trigger on HT_ISSUES. You can create this trigger programmatically using SQL Workshop.

To create a before insert and update trigger on HT_ISSUES:

- 1. Navigate to the Oracle HTML DB home page.
- 2. Click SQL Workshop.
- 3. Click Create Object.
- **4.** For Select the type of database object you wish to create, select **Trigger** and click **Next**.

- 5. For Schema, select the appropriate schema and click Next.
- 6. For Table Name, select HT_ISSUES and click Next.
- 7. For Action, keep the default of Create Trigger and click Next.
- 8. For Trigger Name, enter BIU_HT_ISSUES_NOTIFY_ASSIGNEE.
 - a. For Firing Point, select AFTER.
 - b. For Options, select insert, update.
 - c. For Trigger Body, enter:

```
IF (INSERTING AND
   :new.assigned_to IS NOT NULL)
  OR
  (UPDATING AND
   (:old.assigned_to IS NULL OR
    :new.assigned_to != :old.assigned_to) AND
  :new.assigned_to IS NOT NULL)
  THEN
     FOR cl IN
        (SELECT person_name, person_email
           FROM ht_people
           WHERE person_id = :new.assigned_to)
     LOOP
      IF cl.person_email IS NOT NULL
        THEN
            FOR c2 IN
               (SELECT project_name
                  FROM ht_projects
                  WHERE project_id = :new.related_project)
            LOOP
            HTMLDB_MAIL.SEND(
               p_to => c1.person_email,
              p_from => c1.person_email,
               p_body =>
                  'You have been assigned a new issue. '||
                  'The details are below. ' ||chr(10)||
                  chr(10)
                  ' Project: '|| c2.project_name ||chr(10)||
                  'Summary: '||:new.issue_summary ||chr(10)||
                  ' Status: '||:new.status ||chr(10)||
                  'Priority: '||nvl(:new.priority,'-'),
             p_subj => 'New Issue Assignment');
            END LOOP;
      END IF;
 END LOOP;
END IF;
```

- 9. Click Next.
- 10. To review the code, click the plus icon to the left of SQL.
- 11. Click Finish.
- **12.** When the Success page appears, select **SQL Workshop Home**.

Note: If you plan on using this application, you should either disable this trigger or change the p_to and p_from to your own e-mail address so that you do not create e-mails with invalid addresses each time you assign or reassign an issue.

Add a Notification for Overdue Issues

The second email notification notifies the project lead whenever an issue becomes overdue. An issue becomes overdue when the target resolution date has passed, but the issue is not yet closed. Because there is no human interaction to determine if an issues overdue, you cannot check for it on a page or in a trigger.

The best way to check for overdue issues is to write a package that queries the HT_ISSUES table. If it finds any overdue issues, the package will initiate an email to the Project Lead. This procedure will check for issues by project so that the project lead will receive just one email with all overdue issues rather than an email for each issue. The package will be called once a day by a dbms_job.

You can use the Create Object function as follows:

- Create the package and package body from within the SQL Workshop
- Use SQL Command Processor to run the create commands

For this exercise, you will use SQL Command Processor.

To create the package:

- 1. Navigate to the SQL Workshop home page.
- 2. Select SQL Command Processor.
- 3. For Schema, select the appropriate schema.
- 4. For Enter a SQL or PL/SQL Statement enter:

```
CREATE OR REPLACE package ht_check_overdue_issues
AS
    PROCEDURE email_overdue;
END;
/
```

5. Click Run SQL.

To create the package body:

- 1. Navigate to the SQL Workshop home page.
- 2. Select SQL Command Processor.
- 3. For Schema, select the appropriate schema.
- 4. In Enter a SQL or PL/SQL Statement, enter the following:

```
CREATE OR REPLACE PACKAGE BODY ht_check_overdue_issues
AS
PROCEDURE email_overdue
IS
l_msg_body varchar2(32000) := null;
l_count number := 0;
BEGIN
FOR cl IN
```

```
(SELECT pr.project_id,
           pr.project_name,
           pe.person_name,
          pe.person_email
      FROM ht_projects pr,
          ht_people pe
     WHERE pr.project_id = pe.assigned_project
       AND pe.person_role = 'Lead')
LOOP
  FOR c2 IN
      (SELECT i.target_resolution_date,
             i.issue_summary,
             p.person_name,
             i.status,
             i.priority
         FROM ht_issues i,
             ht_people p
        WHERE i.assigned_to = p.person_id (+)
          AND i.related_project = c1.project_id
          AND i.target_resolution_date < SYSDATE
          AND i.status != 'Closed'
     ORDER BY i.target_resolution_date, i.issue_summary)
LOOP
   IF l_count = 0
      THEN
         l_msg_body :=
           'As of today, the following issues '||
           'are overdue:'|chr(10)|
           chr(10)||
           ' Project: '|| cl.project_name ||chr(10)||
           chr(10)
                Target: '||c2.target_resolution_date ||chr(10)||
               Summary: '||c2.issue_summary ||chr(10)||
          ' Status: '||c2.status ||chr(10)||
          ' Priority: '||c2.priority ||chr(10)||
          'Assigned to: '||c2.person_name;
ELSE
        l_msg_body := l_msg_body ||chr(10)||
           chr(10)||
              Target: '||c2.target_resolution_date ||chr(10)||
              Summary: '||c2.issue_summary ||chr(10)||
               Status: '||c2.status ||chr(10)||
         ' Priority: '||c2.priority ||chr(10)||
         'Assigned to: '||c2.person_name;
END IF;
l_count := l_count + 1;
END LOOP;
 IF l_msg_body IS NOT NULL
   THEN
      HTMLDB_MAIL.SEND(
         p_to => cl.person_email,
        p_from => c1.person_email,
        p_body => l_msg_body,
        p_subj => 'Overdue Issues for Project '||
                   cl.project_name);
 END IF;
 1_count := 0;
END LOOP;
```

```
END email_overdue;
END ht_check_overdue_issues;
```

/

5. Click Run SQL.

To create the DBMS_JOB:

- 1. Navigate to the SQL Workshop home page.
- 2. Select SQL Command Processor.
- 3. For Schema, select the appropriate schema.
- 4. In Enter a SQL or PL/SQL Statement, enter the following:

```
DECLARE
   jobno number;
BEGIN
   DBMS_JOB.SUBMIT(
      job => jobno,
      what => 'BEGIN
            ht_check_overdue_issues.email_overdue;
            END;',
next_date => SYSDATE,
interval => 'TRUNC(SYSDATE)+(25/24)'
            );
   COMMIT;
END;
/
```

5. Click Run SQL.

This dbms_job executes just after midnight each day.

Note: If you plan on using this application, change either the p_to and p_from in the ht_check_overdue_issues package body to your own email address, or do not create the dbms_job. Running the code as written results in the creation of email with invalid addresses that will sit in mail queue.

Add Application Security

The planning and project analysis phase produced two security requirements:

- Only the CEO and Managers can define and maintain projects and people
- Once assigned, only the person assigned or a project lead can change data about the issue

Within Oracle HTML DB, you can define authorization schemes. Authorization controls user access to specific controls or components based on user privileges. Once defined, you can associate an authorization scheme with any page, region or item to

restrict access. Each authorization schema is run only when needed and is defined to validate either once for each page view or once for each session.

Topics in this section include:

- Restrict Project and People Definition
- Restrict Issue Modification

Restrict Project and People Definition

The first requirement states only the CEO and Managers may define and maintain projects and people. To address this requirement you will:

- Create an authorization scheme to check the current user's role
- Associate the authorization scheme with the items on the Projects and People report that navigate to the Create/Edit pages
- Associate the authorization scheme with the Create/Edit pages themselves so that a user cannot bypass the security by manually editing the URL to the target page.

To reference the current user, use the session variable :APP_USER. This will be compared with the person's email address (which is the same as their Oracle HTML DB user name). Whenever coding this type of security, you should always code in a user that can pass all security. You will find this user very useful for development and testing. If you do not take this approach, you will not be able to access the restricted pages unless you define yourself as the CEO or Manager.

Create the Authorization Scheme To create the authorization scheme:

- 1. Navigate to the Oracle HTML DB home page.
- 2. Click Application Builder.
- 3. Click Shared Components.
- 4. Under Security, select Authorization.
- 5. Click Create.
- 6. For Create Authorization Scheme, accept the default From Scratch and click Next.
- Under Authorization Scheme Identification, enter the following in Name: USER_CEO_OR_MANAGER
- 8. Under Authorization Scheme:
 - a. For Scheme Type, select Exists SQL Query.
 - **b.** In Expression 1, enter:

c. For Identify error message displayed when scheme violated, enter:

You are not authorized to access this function.

9. Scroll down to Evaluation Point. For Validate authorization scheme, select **Once per session**.

This selection is sufficient in this instance since the assigned role will not typically change within a given session.

10. Click **Create**.

Next, you need to associate the authorization scheme with the appropriate objects.

Associate Objects on the Projects Report To associate the authorization scheme with the Projects report:

- 1. Click the Edit Page icon.
- 2. In Page, enter 2 and click Go.

The Page Definition for page 2, Projects, appears.

- **3.** Under Regions, select **Q** to the left of Projects.
- 4. Click the Edit icon to the left of PROJECT_ID.
- **5.** Under Authorization, select the Authorization Scheme **USER_CEO_OR_MANAGER**.
- 6. Click Apply Changes.
- 7. Click Cancel.

To associate the authorization scheme with the Create button on the Projects report:

- 1. On the Page Definition for page 2, select the CREATE button
- 2. Under Authorization, select the Authorization Scheme USER_CEO_OR_ MANAGER.
- 3. Click Apply Changes.

Associate Objects with the Create/Edit Report To associate the authorization scheme with the Create/Edit Project page:

1. Navigate to page 3 by clicking the Next Page (>) icon.

The Page Definition for page 3, Create/Edit Project, appears.

- 2. Click Edit Attributes.
- **3.** Under Security, select the Authorization Scheme USER_CEO_OR_MANAGER.
- 4. Click Apply Changes.

Associate Objects with the People Report To associate the authorization scheme with the People report.

1. Navigate to page 4 by clicking the Next Page (>) icon.

The Page Definition for page 4, People, appears.

- 2. Under Regions, select **Q** to the left of People.
- **3.** Click the edit link to the left of PERSON_ID.
- 4. Under Authorization, select the Authorization Scheme USER_CEO_OR_ MANAGER.
- 5. Click Apply Changes.
- 6. Click Cancel.

To associate the authorization scheme with the Create button on the People report:

- 1. On the Page Definition for page 5, select the CREATE button
- **2.** Under Authorization, select the Authorization Scheme USER_CEO_OR_MANAGER.
- 3. Click Apply Changes.

To associate the authorization scheme with the Create/Edit Person Information page:

1. Navigate to page 5.

The Page Definition for page 5, Create/Edit Person Information, appears.

- 2. Click Edit Attributes.
- 3. Under Security, select the Authorization Scheme USER_CEO_OR_MANAGER.
- 4. Click Apply Changes.

You can test this creating a user with the username of HOWTO. The HOWTO user should be able to see the edit link. Then, create another user, HOWTO2. This user should not be able to see the link.

See Also: "Create Users" on page 10-86

Restrict Issue Modification

The second requirement states that once an issue has been assigned, only the person assigned (or a project lead) can change data about the issue. This requirement is a little trickier since it changes for every issue.

Currently, there are two pages that enable users to modify an issue, the Create/Edit Issue page and the Assign Issues page. On the Assign Issues page, the only issues that display are those that are unassigned. Since the issues are unassigned, security is not necessary.

There are many places that a user can navigate to edit an issue:

- Three regions on the home page display issues or have edit links
- The Issues report has links to edit each issue
- The Target Resolution Dates report enables users to select an issue to edit.

Although other users are not allowed to change the data, you do want to enable users to view all the detailed data about an issue so that they can view the progress and resolution. Given this requirement, the best approach would be to create an authorization scheme that will be evaluated once for each page view.

The authorization scheme will be associated with both the Apply Changes and Delete buttons on the Create/Edit Issue page. This way, unauthorized users can view all the details, but if they do change something, they have no way of saving that change.

For added security, you will also associate the authorization scheme with the process that performs the insert, update and delete on HT_ISSUES. This protects your application against someone changing the URL to call the Apply Changes process. To let users know why they are not able to make changes, you will add an HTML region which will display an explanation when the authorization fails. The SQL for this scheme will be specific to the Create/Edit Issues page because it needs to reference P7_ISSUE_ID. It will need to retrieve data from the database because at the time it will be evaluated, the necessary data will not be available in the session state. The only item that will be available will be P7_ISSUE_ID because it will be passed by the link.

Create the Authorization Scheme To create the authorization scheme:

- 1. Navigate to the Application Builder home page.
- 2. Select Shared Components.
- 3. Under Security, select Authorization.
- 4. Click Create.
- 5. For Create Authorization Scheme, accept the default From Scratch and click Next.
- **6.** Under Authorization Scheme Identification, enter the following in Name: P7_ASSIGNED_OR_PROJECT_LEAD
- 7. Under Authorization Scheme:
 - a. For Scheme Type, select PL/SQL Function Returning Boolean.
 - **b.** For Expression 1, enter:

```
DECLARE
  l_related_project integer;

THEN RETURN TRUE;
ELSE
RETURN FALSE;
END IF;
END;
```

c. For Identify error message displayed when scheme violated, enter:

This issue is not assigned to you, nor are you the Project Lead. Therefore you are not authorized to modify the data.

8. Scroll down to Evaluation Point. For Validate authorization scheme, select **Once per page view**.

This selection is necessary since each issue may have a different result.

9. Click Create.

Now you need to associate the authorization scheme with the appropriate objects on the Create/Edit Issue page.

Associate Objects with the Create Edit Issues Report To associate the authorization scheme with buttons and processes:

- 1. Click the Edit Page icon.
- 2. Navigate to page 7. Enter 7 in the Page field and click Go.
- **3.** Under Buttons, select **DELETE**.
 - a. Under Authorization, select the Authorization Scheme P7_ASSIGNED_OR_ PROJECT_LEAD.
 - b. Click Apply Changes.
- 4. Under Buttons, select SAVE.
 - a. Under Authorization, select the Authorization Scheme P7_ASSIGNED_OR_ PROJECT_LEAD.
 - b. Click Apply Changes.
- 5. Under Processes, select Process Row of HT_ISSUES.
 - a. Under Authorization, select the Authorization Scheme P7_ASSIGNED_OR_ PROJECT_LEAD.
 - b. Click Apply Changes.

Create an HTML Region Lastly, create a new region to display an explanation when the authorization fails

To create a new region:

- 1. Under Regions, click the Create icon.
- 2. For Select a common region type, accept the default HTML and click Next.
- 3. On Region Type, select HTML and click Next.
- 4. For Identify Region Attributes:
 - a. For Title, enter Not Authorized.

- **b.** For Display Point, select **Page Template Body (2. items below region content)**.
- c. Click Next.
- 5. For Enter HTML Text Region Source, enter the following and click Next:

You are not authorized to modify the data for this issue because
you are not the Project Lead nor is the issue assigned to you.

- **6.** For Authorization Scheme, select {**Not**}**P7_ASSIGNED_OR_PROJECT_LEAD**. This will make the region only display when the Authorization Scheme fails.
- 7. Click Create Region.

Figure 10–18 displays the Create/Edit Issue page being run by a person for whom the Authorization fails. Notice a new region displays at the top of the page and that the only button being displayed is Cancel.

Figure 10–18 New Region Displaying Authorization Failure

| | | TWINTERS <u>Print</u> <u>Logout</u> |

| (Issue Identification) | | |
| O Issue Summary | | |
| Issue Description | A V | |
| O Identified By - Select Person - ▼ O Identified Date 27-JAN-2005 ▼ O Related Project - Select Person - ▼ | | |

A more elegant solution to this security requirement would be to create a different page for viewing the details of an issue. You would need to have a procedure that would take in the issue_id and current user and pass back a flag for view only or edit. Then you could dynamically build the link for all the reports to call either the View page or the Edit page based upon a call to that procedure. You would still want to protect against someone accessing the edit page without using a link so you would also check permission before firing the insert, update and delete process.

Deploying Your Application

Now that your application is complete, the next step is to deploy it. Typically, developers create applications on one server and deploy it on another. Although this

approach is not required, it enables you to resolve bugs without impacting the production instance.

Note: To deploy an application on another server, you need to install and configure another Oracle HTML DB instance.

Topics in this section include:

- Move the Application Definition
- Alternate Authentication Mechanisms to Consider
- Create Users
- Publish the URL

Move the Application Definition

The definition for your application lives within the Oracle database. The application definition includes everything that makes up the application, including the templates, but it does not include database object definitions or the underlying data. To move an application to another Oracle HTML DB instance, you must export the application definition from your development server and import it into your production server.

Topics in this section include:

- Export the Application Definition
- Create the Required Objects to Support the Application
- Import the Application Definition into the Production Instance
- Load the Data

Export the Application Definition

To export the application definition from your development server:

- 1. Navigate to the Application Builder home page.
- 2. Select Export / Import.
- 3. For Select Task, accept the default Export and click Next.
- 4. For Application, select the application created in this exercise.
- 5. Click Export Application.
- **6.** When prompted, click to **Save** the file.
- 7. Specify a location on your local hard drive and click **Save**.

Create the Required Objects to Support the Application

On your production instance, you need to create the objects necessary to support the application. Log in to the production instance and follow the directions in "Build the Database Objects" on page 10-7.

Note: Although the supporting objects do not need to exist for you to import the application definition, be aware you cannot test the code until they exist.

Import the Application Definition into the Production Instance

Login to the production instance of Oracle HTML DB:

- 1. Navigate to the Application Builder home page.
- 2. Select Export / Import.
- 3. For Select Task, select Import and click Next.
- On Import File:
 - **a.** For Import File, click the **Browse** button and locate your exported file.
 - b. For File Type, select Application/Page Export.
 - c. For File Character Set, accept the default and click Next.

Once the success message appears, the next step is to install the file.

- 5. Click Install.
- 6. On Application Install:
 - **a.** For Parse As Schema, select the schema on your production server that contains your application objects.
 - b. For Build Status, you select Run and Build Application.

This option enables other users to run the application and enables you to log in and change the code if necessary. Alternatively, you can select **Run Application Only**. Be aware that if you select this option you will not be able to access the source code for the application.

- c. For Install As Application, you can select:
 - Reuse Application ID Only select this option if the application ID is not being used on the production instance.
 - Auto Assign New Application ID Select this option to assign a new application ID.
 - Change Application ID Select this option to change the existing application ID. If you select this option, you will be prompted to enter a new application ID.

When you install an application having the same ID as an existing application in the current workspace, the existing application is deleted and then the new application is installed. If you attempt to install an application having the same ID as an existing application in a different workspace, an error message appears.

If all statements are successful the install commits and becomes permanent. If any errors are encountered, the install is rolled back, resulting in no permanent changes.

d. Click Install Application.

If the install is successful, the Post-App Install Utility Options page appears. From here, you can select one of the following:

- Select **Run Application** to see application running
- Select Edit Application Attributes to view the application definition within Oracle HTML DB

Load the Data

The next step in deploying your application would be to load the data. At a minimum, you would need to populate the project and people tables.

Note there are various mechanisms you could use to accomplish this task, including:

- Use the application itself to create data.
- Use the Data Loader to load data copied from a spreadsheet.
- Use the SQL Workshop and run scripts to create data.
- If you have data existing already within an Oracle database, use either export/import to move data between machines or use SQL to retrieve and transform existing data and load it into the application tables.

See Also: "Loading Demonstration Data" on page 10-8

Alternate Authentication Mechanisms to Consider

When the application login page calls the Oracle HTML DB login API with a username and password, the HTML DB engine calls the credentials verification method specified in the application's current authentication scheme. You have three choices as to how credentials are verified from within the login API:

- Implement the method yourself as a PL/SQL function returning boolean and put it in your application's schema.
- Use the built-in LDAP authentication method, which checks username and password against the LDAP directory that you specify.
- Use the built-in Oracle HTML DB authentication method, which checks the username and password against the Oracle HTML DB account repository.

Your application is currently using the built-in Oracle HTML DB. It is also possible to use an external authentication service such Oracle Application Server Single Sign-On. Be aware, however, that Oracle HTML DB redirects to these services instead of showing a login page.

See Also: Using Oracle AS Single Sign-On with HTML DB Applications and Changing Authentication Methods How To documents on OTN:

http://www.oracle.com/technology/products/database/htmldb
/howtos/index.html

Create Users

In order for your application to be accessible, you need to create users. If you are still using Oracle HTML DB authentication, the simplest way to create users it to access the Manage Users page within the workspace that owns the application. Note that you will need to have been granted Administration rights for the workspace in order to access this page.

To create a new user:

- 1. Navigate to the HTML DB home page.
- **2.** From the Workspace Administration list on the right side of the page, select **Manage Users**.
- 3. Select Create New User.

- **4.** Under User Identification, enter the required information. If you are using Oracle HTML DB authentication, make User Name and Email Address identical.
- 5. Under Developer Privileges:
 - a. For User is a developer, select No.
 - **b.** For User is an administrator, select **No**.

These settings enable the user to run the application but not access the Application Builder.

6. Click Create or Create and Create Another.

Publish the URL

Now that you have deployed your application, loaded data, and created users, you can publish your production URL.

You can determine the URL to your application by positioning the mouse over the **Run** icon on the Application Builder home page. The URL displays in the status bar at the bottom of the page.

The Run icon gets its value from the Home link found under the Session Management section of the Application Attributes page. This link is only referenced by this icon and by applications that do not use the Oracle HTML DB Login API. For example, the Issue Tracker on the public Oracle HTML DB development environment, the URL might resemble this:

http://htmldb.oracle.com/pls/otn/f?p=11563:1:3397731373043366363

Where:

- htmldb.oracle.com is the URL of the server
- pls is the indicator to use the mod_plsql cartridge
- otn is the DAD name
- f?p= is a prefix used by Oracle HTML DB
- 11563 is application being called
- 1 is the page within the application to be displayed
- 3397731373043366363 is the session number

To run this example application, you would use the URL:

http://htmldb.oracle.com/pls/otn/f?p=11563:1

When each user logs in, he or she will receive an unique session number.

As you may recall, you created the Issue Tracker application using the Create Application wizard. This wizard creates a process on the Login page (page 101) that controls authentication. The contents of the process are:

WWV_FLOW_CUSTOM_AUTH_STD.LOGIN(
 P_UNAME => :P101_USERNAME,
 P_PASSWORD => :P101_PASSWORD,
 P_SESSION_ID => :FLOW_SESSION,
 P_FLOW_PAGE => :APP_ID||':1'
);

Note that the Page is hard coded into this process. Because of this, the page you pass in the URL is overwritten and does not need to be included. You can access the application by using the following URL:

http://htmldb.oracle.com/pls/otn/f?p=11563:1

As you can see from the example used, the URL has no meaning and can be rather long. The host name can be changed to make it more symbolic. You can also configure Apache to rewrite your URL so that you can publish an abbreviated format and a URL that would be more intuitive to your users. See your Apache documentation for details.

A

DDLs and Scripts for Issue Tracking Application

This appendix contains DDLs (data definition language) and scripts necessary to complete "How to Build and Deploy an Issue Tracking Application" on page 10-1.

This section contains the following topics:

- Create Application Database Objects DDL
- Create Issues Script

Create Application Database Objects DDL

The following DDL (data definition language) create all the required database objects for the issue tracking application in

```
_ _
-- This DDL creates all the database objects used by the
-- Issue Management Application featured in
-- the Oracle HTML DB Development Document
- -
-- HT_PROJECTS
___
-- The HT_PROJECTS DDL:
    + creates the projects table with the necessary columns,
___
___
       including a new column for a system generated primary key
     + declares the new primary key
___
     + implements the real primary key, project name, as a unique key
___
     + implements a sequence to generate project id
--
     + assigns the sequence to populate the project id
___
--
      whenever a new record is created
      + declares table and column comments
___
```

| CREATE TABLE ht_projects (| | | |
|----------------------------|---------------|-----|-------|
| project_id | INTEGER | NOT | NULL, |
| project_name | VARCHAR2(100) | NOT | NULL, |
| start_date | DATE | NOT | NULL, |
| target_end_date | DATE | NOT | NULL, |
| actual end date | DATE | | |

```
)
/
ALTER table ht_projects
  ADD CONSTRAINT ht_projects_pk
