VERITAS Disc

Contents

Patch Disc

Note Not available in every release.

If you have purchased or received a maintenance release of the VERITAS Storage Solutions kit, a disc containing software patches for VERITAS products is included. Patch installation information is available in the product patches directories on the disc.

After installing the product, mount the patch software disc as instructed. Then go to the appropriate product directory and review the patch installation instructions.

Language Discs

Note Not available in every release.

VERITAS products are partially or wholly localized in Japanese, French, and Simplified Chinese. If you purchase a VERITAS non-English language product, a language disc and a language documentation disc are included in the Storage Solutions kit. The language disc contains localized packages that must be installed for VERITAS products to operate in the supported locale. The language documentation disc contains translated product guides (see "[Documentation Disc](#)" on page 3).

Licensing Procedures

To obtain a valid software license key, use one of the following methods:

- ◆ Access the VERITAS vLicense™ website (recommended).
- ◆ Fax the License Key Request Form included in the license kit.

Using the VERITAS vLicense Website

The License Key Request Form is a one-page insert included in the product license kit. You must have this form to obtain a software license key for your VERITAS product.

Note If you did not receive, or have misplaced, the form, email license@veritas.com to obtain a new form. Save the form for future reference.

The form lists the following information required to establish a user account on vLicense and generate a license key:

- ◆ Customer number
- ◆ Order number
- ◆ Serial number

Use a web browser to access the vLicense website at <http://vlicense.veritas.com> and follow the instructions. If you already have an account, you can log in. If not, you must create an account before logging in.

After you receive the license key, read “[Installation Methods](#)” on page 7.

Faxing the License Key Request Form

If you do not have web access, fax the License Key Request Form directly to VERITAS. Sign and date the form in the appropriate spaces and fax it to the number shown on the form. Faxed orders are typically processed within two business days.

After you receive a license key, read [“Installation Methods”](#) on page 7.

VERITAS Licensing Commands

The `VRTSvlic` licensing package must be installed on your system to enable VERITAS product licensing. `VRTSvlic` is typically installed by the product installation scripts invoked through the Installation Menu. The following VERITAS licensing commands are available on the your system after `VRTSvlic` is installed:

`vxlicinst`—licenses a VERITAS product already installed on a system

`vxlicrep`—views currently installed licenses

`vxlictest`—retrieves features encoded in a license key and their descriptions

You can review the descriptions and available options for these commands in the online manual pages installed with the `VRTSvlic` package.

Mounting a Software Disc

1. Log in as superuser.
2. Place the VERITAS software disc containing your product into a CD-ROM drive connected to your system.
3. If Solaris volume management software is running on your system, the software disc automatically mounts as `/cdrom/cdrom0`.
4. If Solaris volume management software is not available to mount the CD, you must mount it manually. After inserting the CD, enter:

```
# mount -F hsfs -o ro /dev/dsk/c0t6d0s2 /cdrom
```

where `c0t6d0s2` is the default address for the CD-ROM drive.

Installation Methods

There are three ways to install VERITAS products:

- ◆ Using the VERITAS Installation Menu
- ◆ Invoking product installation scripts from the command line
- ◆ Running standard operating system package installation commands

Some products can be installed only by using the Installation Menu or by invoking the script from the command line. “[Using the VERITAS Installation Menu](#)” is described below. See the product installation guides for information on the other installation methods.

Note VERITAS products are installed under the `/opt` directory on the specified host systems. Ensure that the directory `/opt` exists and has write permissions for root before starting an installation procedure. Do not make `/opt` a VxFS file system.

Using the VERITAS Installation Menu

The Installation Menu simplifies the process of installing VERITAS software and is the recommended method of installation. Selecting a product to install from the Installation Menu invokes the product installation script. To begin installing:

1. Locate the name of the product to install on the product software disc. Insert the product software disc into a CD-ROM drive attached to your system and mount it (see [Mounting a Software Disc](#) on page 7).
2. Move to the `cdrom0` directory:

```
# cd /cdrom/cdrom0
```

Note If you are using the VERITAS Enterprise Administrator (VEA) GUI on your system, stop the VEA server before performing a new installation, an uninstall, or an upgrade. To stop the VEA server, on each system type:

```
# /opt/VRTS/bin/vxsvc -k
```

3. From the `cdrom0` directory, invoke the installer script:

```
# ./installer
```

4. The Installation Menu lists the following options to select:

```
I) Install/Upgrade a Product    C) Configure an Installed Product
L) License a Product           P) Perform a Preinstallation Check
U) Uninstall a Product         D) View a Product Description
Q) Quit                        ?) Help
```

Select Help (?) to display information about the options.

5. If you select I, the list of products and options to install is displayed:

Additional Product Information

The following sections contain important information about VERITAS Storage Solutions products.

Locating and Displaying Documentation

VERITAS does not include hard copy guides in the VERITAS Storage Solutions kit. Documents are provided in Adobe Portable Document Format (PDF) on the enclosed discs. You can access product documentation in several ways:

- ◆ To view a product's release notes or installation guide, mount the appropriate product software disc and go to the *product_name/release_notes* or *product_name/docs* directory.
- ◆ After a product documentation package is installed, user and administration guides, installation guides, and tutorials are available under the */opt/VRTS* directory.

Localized documentation packages are installed under the */opt/VRTS/language_dir* directory. The *language_dir* can be "ja" for Japanese, "fr" for French, or "zh" for simplified Chinese.

- ◆ Mount the "[Documentation Disc](#)" containing all product guides.

Note Release notes are available only under the *release_notes* directory of the product disc. They are not installed with the documentation packages and are not on the VERITAS Documentation disc.

Ordering Documents

You can purchase hard copy software guides by contacting your salesperson or by ordering directly from the VERITAS DocStore™ at:

<http://www.veritas.com/docstore>

Installing Language Products

If you purchase a non-English language version of VERITAS Storage Solutions, the product includes two additional software discs, a language disc and a language documentation disc. You install the VxFS language packages using the installation script, `install_lp`, provided on the language disc.

After installing a VERITAS product, mount the language package CD and run the command-line installation script. The script detects any installed VERITAS products and automatically installs the corresponding language packages.

You can also install language packages using the `pkgadd` command. Follow the instructions described in your product installation guide.

Product Notes
<p>The latest version of the VERITAS SANPoint Control QuickStart 4.0 Hardware and Software Compatibility List (spcqs_suptmx.pdf) is available on the VERITAS Support website at:</p> <p>http://seer.support.veritas.com/docs/260958.htm</p>
<p>In the Group Wizard, if you try to add a host without an HBA (host bus adaptor), the wizard indicates that it will add the host to the group, but the host will not be shown in the resulting group. The workaround is to restrict group membership to hosts that have HBAs.</p>
<p>On non-English locales, SANPoint Control QuickStart does not check for duplicate group or enclosure object names. This can cause unexpected application behavior. Avoid assigning duplicate group or enclosure object names.</p>
<p>On non-English locales, at the end of the product installation, SANPoint Control QuickStart enters a configuration phase. In some instances, the installation reports:</p> <pre>Configuring \$s on \$s</pre> <p>You can safely ignore this message.</p>

If you encounter a product error message, record the unique message number preceding the text of the message. When contacting VERITAS Technical Support, either by telephone or by visiting the VERITAS Technical Support website, be sure to provide the relevant message number. VERITAS Technical Support will use this message number to quickly determine if there are TechNotes or other information available for you.

A unique message number is an alpha-numeric string beginning with the letter “V”. For example, in the message number:

V-5-732-8018 At least one disk must be specified

the “V” indicates that this is a VERITAS product error message. The text of the error message follows the unique message number.
